

Solid **Waste** Engineering

P. Aarne Vesilind | William Worrell | Debra Reinhart

Contents

FOREWORD by John Skinner xi

PREFACE xvii

CHAPTER ONE

INTEGRATED SOLID WASTE MANAGEMENT

1

Solid waste in history	1
Economics and solid waste	4
Legislation and regulations	6
Materials flow	8
Reduction	10
Reuse	11
Recycling	12
Recovery	15
Disposal of solid waste in landfills	17
Energy conversion	21
The need for integrated solid waste management	23
Special wastes	24
Final thoughts	25
Problems	27

CHAPTER TWO

MUNICIPAL SOLID WASTE CHARACTERISTICS AND QUANTITIES

30

Definitions	30
Municipal solid waste generation	33

Municipal solid waste characteristics 38
 Composition by identifiable items 39
 Moisture content 45
 Particle size 48
 Chemical composition 49
 Heat value 49
 Bulk and material density 54
 Mechanical properties 56
 Biodegradability 57
Final thoughts 58
Appendix: Measuring particle size 59
Problems 64

CHAPTER THREE

COLLECTION

67

Refuse collection systems 67
 Phase 1: house to can 68
 Phase 2: can to truck 69
 Phase 3: truck from house to house 72
 Phase 4: truck routing 76
 Phase 5: truck to disposal 78
Commercial wastes 80
Transfer stations 82
Collection of recyclable materials 85
Litter and street cleanliness 91
Final thoughts 96
Appendix: Design of collection systems 96
Problems 103

CHAPTER FOUR

LANDFILLS

109

Planning, siting, and permitting of landfills 110
 Planning 110
 Siting 115
 Permitting 117

Landfill processes	118
Biological degradation	118
Leachate production	121
Gas production	128
Landfill design	132
Liners	132
Leachate collection, treatment, and disposal	133
Landfill gas collection and use	143
Geotechnical aspects of landfill design	151
Stormwater management	151
Landfill cap	152
Landfill operations	155
Landfill equipment	155
Filling sequences	155
Daily cover	158
Monitoring	158
Post-closure care and use of old landfills	160
Landfill mining	163
Final thoughts	164
Problems	169

CHAPTER FIVE

PROCESSING OF MUNICIPAL SOLID WASTE

173

Refuse physical characteristics	173
Storing MSW	175
Conveying	176
Compacting	182
Shredding	183
Use of shredders in solid waste processing	183
Types of shredders used for solid waste processing	185
Describing shredder performance by changes in particle-size distribution	191
Power requirements of shredders	197
Health and safety	200
Hammer wear and maintenance	201
Shredder design	202
Pulping	206
Roll crushing	207

Granulating	210
Final thoughts	210
Appendix: The pi breakage theorem	210
Problems	221

CHAPTER SIX

MATERIALS SEPARATION

224

General expressions for materials separation	224
Binary separators	224
Polynary separators	226
Effectiveness of separation	227
Picking (hand sorting)	229
Screens	230
Trommel screens	231
Reciprocating and disc screens	236
Float/sink separators	239
Theory of operation	240
Jigs	246
Air classifiers	247
Other float/sink devices	259
Magnets and electromechanical separators	260
Magnets	260
Eddy current separators	263
Electrostatic separation processes	265
Other devices for materials separation	265
Materials separation systems	269
Performance of materials recovery facilities	272
Final thoughts	275
Problems	277

CHAPTER SEVEN

COMBUSTION AND ENERGY RECOVERY

283

Heat value of refuse	283
Ultimate analysis	283
Compositional analysis	285
Proximate analysis	288
Calorimetry	288

Materials and thermal balances	293
Combustion air	293
Efficiency	295
Thermal balance on a waste-to-energy combustor	297
Combustion hardware used for MSW	300
Waste-to-energy combustors	300
Modular starved air combustors	307
Pyrolysis	307
Mass burn versus RDF	310
Undesirable effects of combustion	314
Waste heat	314
Ash	316
Air pollutants	319
Dioxin	329
Final thoughts	332
Problems	334

CHAPTER EIGHT

BIOCHEMICAL PROCESSES

336

Methane generation by anaerobic digestion	337
Anaerobic decomposition in mixed digesters	338
Potential for application of anaerobic digesters	342
Methane extraction from landfills	343
Potential for the application of methane extraction from landfills	344
Composting	344
Fundamentals of composting	344
Composting municipal solid waste	349
Potential for composting municipal solid waste	351
Composting wastes other than refuse	354
Other biochemical processes	355
Glucose production by acid and enzymatic hydrolysis	355
Other bacterial fermentation processes	357
Final thoughts	358
Problems	362

CHAPTER NINE

CURRENT ISSUES IN SOLID WASTE MANAGEMENT

363

Life cycle analysis and management	363
Life cycle analysis	363
Life cycle management	366
Flow control	368
Public or private ownership and operation	369
Contracting for solid waste services	370
Financing solid waste facilities	373
Calculating annual cost	375
Calculating present worth	376
Calculating sinking funds	377
Calculating capital plus O&M costs	378
Comparing alternatives	378
Hazardous materials	378
The role of the solid waste engineer	380
Final thoughts	381
Epilogue	383
Problems	385

APPENDIX A	387
APPENDIX B	404
APPENDIX C	416
AUTHOR INDEX	420
SUBJECT INDEX	423
