Preface to the Classics Edition xv
Preface xvii

PART ONE
INTRODUCTION 1

1 Economizing and the Economy 2
1.1 *The Economizing Problem* 2
1.2 *Institutions of the Economy* 3
1.3 *Economics* 4

PART TWO
STATIC OPTIMIZATION 7

2 *The Mathematical* Programming Problem 8
2.1 *Formal Statement of the Problem* 8
2.2 *Types of Maxima, the Weierstrass Theorem, and the Local-Global Theorem* 12
2.3 *Geometry of the Problem* 16

3 Classical Programming 20

3.1 *The Unconstrained Case* 22

3.2 *The Method of Lagrange Multipliers* 28

3.3 *The Interpretation of the Lagrange Multipliers* 36

Problems 38

4 Nonlinear Programming 44

4.1 *The Case of No Inequality Constraints* 46

4.2 *The Kuhn-Tucker Conditions* 49

4.3 *The Kuhn-Tucker Theorem* 56

4.4 *The Interpretation of the Lagrange Multipliers* 60

4.5 *Solution Algorithms* 62

Problems 64

5 Linear Programming 72

5.1 *The Dual Problems of Linear Programming* 77

5.2 The Lagrangian Approach, *Existence, Duality and Complementary Slackness Theorems* 79

5.3 *The Interpretation of the Dual* 86

5.4 *The Simplex Algorithm* 89

Problems 96

6 Game Theory 106

6.1 *Classification and Description of Games* 107

6.2 *Two-person, Zero-sum Games* 110

6.3 *Two-person Nonzero-sum Games* 120

6.4 *Cooperative Games* 123

6.5 *Games With Infinitely Many Players* 130

Problems 131

PART THREE

APPLICATIONS OF *STATIC OPTIMIZATION*

141

7 Theory of the Household 142

7.1 Commodity Space 142

7.2 *The Preference Relation* 143

7.3 *The Neoclassical Problem of the Household* 148

7.4 *Comparative Statics of the Household* 154
7.5 *Revealed Preference* 163
7.6 *von Neumann-Morgenstern Utility* 166
Problems 169

8 Theory of the Firm **178**
8.1 *The Production Function* 178
8.2 *The Neoclassical Theory of the Firm* 189
8.3 *Comparative Statics of the Firm* 196
8.4 *Imperfect Competition: Monopoly and Monopsony* 201
8.5 *Competition Among the Few: Oligopoly and Oligopsony* 205
Problems 213

9 General Equilibrium **220**
9.1 *The Classical Approach: Counting Equations and Unknowns* 221
9.2 *The Input-Output Linear Programming Approach* 227
9.3 *The Neoclassical Excess Demand Approach* 238
9.4 *Stability of Equilibrium* 241
9.5 *The von Neumann Model of an Expanding Economy* 246
Problems 249

10 Welfare Economics **258**
10.1 *The Geometry of the Problem in the* $2 \times 2 \times 2$ *Case* 259
10.2 *Competitive Equilibrium and Pareto Optimality* 269
10.3 *Market Failure* 278
10.4 *Optimality Over Time* 279
Problems 282

PART FOUR
DYNAMIC OPTIMIZATION
291

11 The Control Problem **292**
11.1 *Formal Statement of the Problem* 293

11.2 *Some Special Cases* 298
11.3 *Types of Control* 299
11.4 *The Control Problem as One of Programming in an Infinite Dimensional Space; the Generalized Weierstrass Theorem* 302

12 Calculus of Variations **306**
12.1 *Euler Equation* 308
12.2 *Necessary Conditions* 312
12.3 *Transversality Condition* 315
12.4 *Constraints* 317
Problems 320

13 Dynamic Programming **326**
13.1 *The Principle of Optimality and Bellman's Equation* 327
13.2 *Dynamic Programming and the Calculus of Variations* 330
13.3 *Dynamic Programming Solution of Multistage Optimization Problems* 333
Problems 338

14 Maximum Principle **344**
14.1 *Costate Variables, the Hamiltonian, and the Maximum Principle* 345
14.2 *The Interpretation of the Costate Variables* 351
14.3 *The Maximum Principle and the Calculus of Variations* 353
14.4 *The Maximum Principle and Dynamic Programming* 355
14.5 *Examples* 357
Problems 362

15 Differential Games **370**
15.1 *Two-Person Deterministic Continuous Differential Games* 371
15.2 *Two-Person Zero-Sum Differential Games* 373
15.3 *Pursuit Games* 377
15.4 *Coordination Differential Games* 383
15.5 *Noncooperative Differential Games* 387
Problems 388

PART FIVE

APPLICATIONS OF DYNAMIC OPTIMIZATION 397

16 Optimal Economic Growth 398

16.1 The Neoclassical Growth Model 399
16.2 Neoclassical Optimal Economic Growth 405
16.3 The Two Sector Growth Model 416
16.4 Heterogeneous Capital Goods 430
Problems 435

APPENDICES 449

Appendix A Analysis 450

A.1 Sets 450
A.2 Relations and Functions 452
A.3 Metric Spaces 454
A.4 Vector Spaces 457
A.5 Convex Sets and Functions 460
A.6 Differential Calculus 465
A.7 Differential Equations 467

Appendix B Matrices 476

B.1 Basic Definitions and Examples 476
B.2 Some Special Matrices 478
B.3 Matrix Relations and Operations 479
B.4 Scalar Valued Functions Defined on Matrices 484
B.5 Inverse Matrix 487
B.6 Linear Equations and Linear Inequalities 488
B.7 Linear Transformations; Characteristic Roots and Vectors 493
B.8 Quadratic Forms 495
B.9 Matrix Derivatives 497

Index 501
