

FOURTH EDITION

Wastewater Engineering

Treatment and Reuse

METCALF & EDDY

INTERNATIONAL EDITION

<i>Preface</i>	xxi	2-2	Sampling and Analytical Procedures	29
<i>Acknowledgments</i>	xxv		<i>Sampling</i>	29
<i>Foreword</i>	xxvii		<i>Methods of Analysis</i>	34
			<i>Units of Measurement for Physical and Chemical Parameters</i>	35
			<i>Useful Chemical Relationships</i>	35
1 Wastewater Engineering: An Overview	1	2-3	Physical Characteristics	42
1-1 Terminology	3		<i>Solids</i>	42
1-2 Impact of Regulations on Wastewater Engineering	3		<i>Particle Size Distribution</i>	48
1-3 Health and Environmental Concerns in Wastewater Management	7		<i>Turbidity</i>	51
1-4 Wastewater Characteristics	9		<i>Color</i>	52
<i>Improved Analytical Techniques</i>	10		<i>Absorption/Transmittance</i>	52
<i>Importance of Improved Wastewater Characterization</i>	10		<i>Temperature</i>	54
1-5 Wastewater Treatment	10		<i>Conductivity</i>	56
<i>Treatment Methods</i>	11		<i>Density, Specific Gravity, and Specific Weight</i>	56
<i>Current Status</i>	12	2-4	Inorganic Nonmetallic Constituents	57
<i>New Directions and Concerns</i>	15		<i>pH</i>	57
<i>Future Trends in Wastewater Treatment</i>	20		<i>Chlorides</i>	59
1-6 Wastewater Reclamation and Reuse	20		<i>Alkalinity</i>	59
<i>Current Status</i>	21		<i>Nitrogen</i>	60
<i>New Directions and Concerns</i>	21		<i>Phosphorus</i>	63
<i>Future Trends in Technology</i>	21		<i>Sulfur</i>	64
1-7 Biosolids and Residuals Management	22		<i>Gases</i>	64
<i>Current Status</i>	22		<i>Odors</i>	70
<i>New Directions and Concerns</i>	23	2-5	Metallic Constituents	77
<i>Future Trends in Biosolids Processing</i>	23		<i>Importance of Metals</i>	77
			<i>Sources of Metals</i>	77
2 Constituents in Wastewater	27		<i>Sampling and Methods of Analysis</i>	77
2-1 Wastewater Constituents	29		<i>Typical Effluent Discharge Limits for Metals</i>	78
<i>Constituents Found in Wastewater</i>	29	2-6	Aggregate Organic Constituents	80
<i>Constituents of Concern in Wastewater Treatment</i>	29		<i>Measurement of Organic Content</i>	81
			<i>Biochemical Oxygen Demand (BOD)</i>	81
			<i>Total and Soluble Chemical Oxygen Demand (COD and SCOD)</i>	93
			<i>Total and Dissolved Organic Carbon (TOC and DTOC)</i>	94
			<i>UV-Absorbing Organic Constituents</i>	95

	<i>Theoretical Oxygen Demand (ThOD)</i>	96		<i>Sources and Rates of Industrial</i>	
	<i>Interrelationships between BOD, COD,</i>			<i>(Nondomestic) Wastewater Flows</i>	162
	<i>and TOC</i>	96		<i>Infiltration/Inflow</i>	163
	<i>Oil and Grease</i>	98		<i>Exfiltration from Collection Systems</i>	167
	<i>Surfactants</i>	98		<i>Combined System Flowrates</i>	168
2-7	Individual Organic Compounds	99	3-3	Statistical Analysis of Flowrates,	
	<i>Priority Pollutants</i>	99		Constituent Concentrations, and	
	<i>Analysis of Individual</i>			Mass Loadings	170
	<i>Organic Compounds</i>	100		<i>Common Statistical Parameters</i>	170
	<i>Volatile Organic Compounds (VOCs)</i>	100		<i>Graphical Analysis of Data</i>	171
	<i>Disinfection Byproducts</i>	102	3-4	Analysis of Wastewater Flowrate Data	178
	<i>Pesticides and Agricultural Chemicals</i>	102		<i>Definition of Terms</i>	178
	<i>Emerging Organic Compounds</i>	102		<i>Variations in Wastewater Flowrates</i>	179
2-8	Biological Characteristics	104		<i>Wastewater Flowrate Factors</i>	180
	<i>Microorganisms Found in Surface</i>		3-5	Analysis of Constituent Mass	
	<i>Waters and Wastewater</i>	104		Loading Data	181
	<i>Pathogenic Organisms</i>	109		<i>Wastewater Constituent Concentrations</i>	181
	<i>Use of Indicator Organisms</i>	115		<i>Variations in Constituent Concentrations</i>	185
	<i>Enumeration and Identification</i>			<i>Flow-Weighted Constituent</i>	
	<i>of Bacteria</i>	118		<i>Concentrations</i>	192
	<i>Enumeration and Identification</i>			<i>Calculation of Mass Loadings</i>	194
	<i>of Viruses</i>	126		<i>Effect of Mass Loading Variability</i>	
	<i>Polymerase Chain Reaction (PCR)</i>	129		<i>on Treatment Plant Performance</i>	197
	<i>Development of Microorganisms</i>		3-6	Selection of Design Flowrates and	
	<i>Typing Techniques</i>	130		Mass Loadings	197
	<i>New and Reemerging Microorganisms</i>	130		<i>Design Flowrates</i>	199
2-9	Toxicity Tests	130		<i>Design Mass Loadings</i>	205
	<i>Toxicity Terminology</i>	131			
	<i>Toxicity Testing</i>	133			
	<i>Analysis of Toxicity Test Results</i>	134			
	<i>Application of Toxicity Test Results</i>	136			
	<i>Identification of Toxicity Components</i>	137			
3	Analysis and Selection		4	Introduction to Process	
	of Wastewater			Analysis and Selection	215
	Flowrates and		4-1	Reactors Used for the Treatment	
	Constituent Loadings	153		of Wastewater	218
3-1	Components of Wastewater Flows	154		<i>Types of Reactors</i>	218
3-2	Wastewater Sources and Flowrates	154		<i>Application of Reactors</i>	220
	<i>Domestic Wastewater Sources</i>			<i>Hydraulic Characteristics of Reactors</i>	220
	<i>and Flowrates</i>	155	4-2	Mass-Balance Analysis	222
	<i>Strategies for Reducing Interior Water</i>			<i>The Mass-Balance Principle</i>	222
	<i>Use and Wastewater Flowrates</i>	158		<i>Preparation of Mass Balances</i>	224
	<i>Water Use in Developing Countries</i>	162		<i>Application of the Mass-Balance</i>	
				<i>Analysis</i>	224
				<i>Steady-State Simplification</i>	225
			4-3	Modeling Ideal Flow in Reactors	226
				<i>Ideal Flow in Complete-Mix Reactor</i>	226
				<i>Ideal Flow in Plug-Flow Reactor</i>	227

4-4	Analysis of Nonideal Flow in Reactors		<i>Gas-Liquid Mass Transfer</i>	284
	Using Tracers	229	<i>Liquid-Solid Mass Transfer</i>	293
	<i>Factors Leading to Nonideal Flow</i>		4-9 Introduction to Process Selection	297
	<i>in Reactors</i>	229	<i>Important Factors in Process Selection</i>	297
	<i>Need for Tracer Analysis</i>	231	<i>Process Selection Based</i>	
	<i>Types of Tracers</i>	231	<i>on Reaction Kinetics</i>	299
	<i>Conduct of Tracer Tests</i>	231	<i>Process Selection Based</i>	
	<i>Analysis of Tracer Response Curves</i>	233	<i>on Mass Transfer</i>	300
	<i>Practical Interpretation of Tracer</i>		<i>Process Design Based</i>	
	<i>Measurements</i>	242	<i>on Loading Criteria</i>	301
4-5	Modeling Nonideal Flow in Reactors	245	<i>Bench Tests and Pilot-Plant Studies</i>	301
	<i>The Distinction between Molecular</i>		<i>Reliability Considerations in</i>	
	<i>Diffusion, Turbulent Diffusion,</i>		<i>Process Selection</i>	301
	<i>and Dispersion</i>	245		
	<i>Plug-Flow Reactor with</i>		5 Physical Unit	
	<i>Axial Dispersion</i>	246	Operations	311
	<i>Complete-Mix Reactors in Series</i>	252	5-1 Screening	315
4-6	Reactions, Reaction Rates, and		<i>Classification of Screens</i>	315
	Reaction Rate Coefficients	257	<i>Coarse Screens (Bar Racks)</i>	316
	<i>Types of Reactions</i>	257	<i>Fine Screens</i>	322
	<i>Rate of Reaction</i>	258	<i>Microscreens</i>	326
	<i>Reaction Order</i>	259	<i>Screenings Characteristics</i>	
	<i>Types of Rate Expressions</i>	260	<i>and Quantities</i>	327
	<i>Rate Expressions Used in</i>		5-2 Coarse Solids Reduction	330
	<i>Environmental Modeling</i>	261	<i>Comminutors</i>	331
	<i>Effects of Temperature on Reaction</i>		<i>Macerators</i>	332
	<i>Rate Coefficients</i>	261	<i>Grinders</i>	333
	<i>Analysis of Reaction Rate Coefficients</i>	264	<i>Design Considerations</i>	333
4-7	Modeling Treatment Process Kinetics	269	5-3 Flow Equalization	333
	<i>Batch Reactor with Reaction</i>	269	<i>Description/Application</i>	333
	<i>Complete-Mix Reactor with Reaction</i>	270	<i>Design Considerations</i>	335
	<i>Complete-Mix Reactors in Series</i>		5-4 Mixing and Flocculation	344
	<i>with Reaction</i>	271	<i>Continuous Rapid Mixing in</i>	
	<i>Ideal Plug-Flow Reactor</i>		<i>Wastewater Treatment</i>	345
	<i>with Reaction</i>	274	<i>Continuous Mixing in</i>	
	<i>Comparison of Complete-Mix and</i>		<i>Wastewater Treatment</i>	345
	<i>Plug-Flow Reactors with Reaction</i>	275	<i>Energy Dissipation in Mixing</i>	
	<i>Ideal Plug-Flow Reactor with</i>		<i>and Flocculation</i>	347
	<i>Retarded Reaction</i>	277	<i>Timescale in Mixing</i>	350
	<i>Plug-Flow Reactor with Axial</i>		<i>Types of Mixers Used for Rapid Mixing</i>	
	<i>Dispersion and Reaction</i>	279	<i>in Wastewater Treatment</i>	350
	<i>Other Reactor Flow Regimes and</i>		<i>Types of Mixers Used for Flocculation</i>	
	<i>Reactor Combinations</i>	281	<i>in Wastewater Treatment</i>	355
4-8	Treatment Processes Involving		<i>Types of Mixers Used for Continuous</i>	
	Mass Transfer	283	<i>Mixing in Wastewater Treatment</i>	359
	<i>Basic Principle of Mass Transfer</i>	283		

	<i>New Developments in</i>				
	<i>Mixing Technology</i>	361		<i>Mechanical Aerators</i>	443
5-5	Gravity Separation Theory	361		<i>Energy Requirement for Mixing in</i>	
	<i>Description</i>	362		<i>Aeration Systems</i>	448
	<i>Particle Settling Theory</i>	363		<i>Generation and Dissolution of</i>	
	<i>Discrete Particle Settling</i>	367		<i>High-Purity Oxygen</i>	448
	<i>Flocculent Particle Settling</i>	372	5-13	<i>Postaeration</i>	452
	<i>Inclined Plate and Tube Settling</i>	374		Removal of Volatile Organic Compounds	
	<i>Hindered (Zone) Settling</i>	378		(VOCs) by Aeration	456
	<i>Compression Settling</i>	383		<i>Emission of VOCs</i>	456
	<i>Gravity Separation in an Accelerated</i>			<i>Mass Transfer Rates for VOCs</i>	457
	<i>Flow Field</i>	383		<i>Mass Transfer of VOCs from Surface</i>	
5-6	Grit Removal	384		<i>and Diffused-Air Aeration Processes</i>	459
	<i>Types of Grit Chambers</i>	385		<i>Control Strategies for VOCs</i>	463
	<i>Horizontal-Flow Grit Chambers</i>	385	6	Chemical Unit	
	<i>Aerated Grit Chambers</i>	386		Processes	475
	<i>Vortex-Type Grit Chambers</i>	392	6-1	Role of Chemical Unit Processes in	
	<i>Solids (Sludge) Degritting</i>	392		Wastewater Treatment	476
	<i>Grit Characteristics, Quantities,</i>			<i>Application of Chemical Unit Processes</i>	477
	<i>Processing, and Disposal</i>	394		<i>Considerations in the Use of Chemical</i>	
5-7	Primary Sedimentation	396		<i>Unit Processes</i>	478
	<i>Description</i>	397	6-2	Fundamentals of Chemical Coagulation	478
	<i>Sedimentation Tank Performance</i>	405		<i>Basic Definitions</i>	479
	<i>Design Considerations</i>	406		<i>Nature of Particles in Wastewater</i>	480
	<i>Characteristics and Quantities of</i>			<i>Development and Measurement of</i>	
	<i>Solids (Sludge) and Scum</i>	411		<i>Surface Charge</i>	481
5-8	High-Rate Clarification	411		<i>Particle-Particle Interactions</i>	482
	<i>Enhanced Particle Flocculation</i>	412		<i>Particle Destabilization with Potential-</i>	
	<i>Analysis of Ballasted Particle</i>			<i>Determining Ions and Electrolytes</i>	483
	<i>Flocculation and Settling</i>	412		<i>Particle Destabilization and</i>	
	<i>Process Application</i>	414		<i>Aggregation with Polyelectrolytes</i>	485
5-9	Large-Scale Swirl and Vortex			<i>Particle Destabilization and Removal</i>	
	Separators for Combined			<i>with Hydrolyzed Metal Ions</i>	486
	Wastewater and Stormwater	417	6-3	Chemical Precipitation for Improved	
5-10	Flotation	419		Plant Performance	493
	<i>Description</i>	419		<i>Chemical Reactions in Wastewater</i>	
	<i>Design Considerations for</i>			<i>Precipitation Applications</i>	493
	<i>Dissolved-Air Flotation Systems</i>	422		<i>Enhanced Removal of Suspended Solids</i>	
5-11	Oxygen Transfer	425		<i>in Primary Sedimentation</i>	497
	<i>Description</i>	425		<i>Independent Physical-</i>	
	<i>Evaluation of Oxygen</i>			<i>Chemical Treatment</i>	498
	<i>Transfer Coefficient</i>	425		<i>Estimation of Sludge Quantities from</i>	
5-12	Aeration Systems	430		<i>Chemical Precipitation</i>	499
	<i>Types of Aeration Systems</i>	430	6-4	Chemical Precipitation for	
	<i>Diffused-Air Aeration</i>	430		Phosphorus Removal	500

	<i>Chemistry of Phosphate Precipitation</i>	501	7-2	Composition and Classification of Microorganisms	555
	<i>Strategies for Phosphorus Removal</i>	503		<i>Cell Components</i>	555
	<i>Phosphorus Removal Using Metal Salts and Polymers</i>	505		<i>Cell Composition</i>	557
	<i>Phosphorus Removal Using Lime</i>	507		<i>Environmental Factors</i>	558
	<i>Phosphorus Removal with Effluent Filtration</i>	508		<i>Microorganism Identification and Classification</i>	559
	<i>Comparison of Chemical Phosphorus Removal Processes</i>	508	7-3	Introduction to Microbial Metabolism	563
	<i>Estimation of Sludge Quantities from Phosphorus Precipitation</i>	509		<i>Carbon and Energy Sources for Microbial Growth</i>	563
6-5	Chemical Precipitation for Removal of Heavy Metals and Dissolved Inorganic Substances	514		<i>Nutrient and Growth Factor Requirements</i>	565
	<i>Precipitation Reactions</i>	514	7-4	Bacterial Growth and Energetics	565
	<i>Coprecipitation with Phosphorus</i>	517		<i>Bacterial Reproduction</i>	566
6-6	Chemical Oxidation	517		<i>Bacterial Growth Patterns in a Batch Reactor</i>	566
	<i>Fundamentals of Chemical Oxidation</i>	517		<i>Bacterial Growth and Biomass Yield</i>	567
	<i>Applications</i>	522		<i>Measuring Biomass Growth</i>	567
	<i>Chemical Oxidation of BOD and COD</i>	523		<i>Estimating Biomass Yield and Oxygen Requirements from Stoichiometry</i>	568
	<i>Chemical Oxidation of Ammonia</i>	524		<i>Estimating Biomass Yield from Bioenergetics</i>	571
6-7	Chemical Neutralization, Scale Control, and Stabilization	526		<i>Stoichiometry of Biological Reactions</i>	578
	<i>pH Adjustment</i>	526		<i>Biomass Synthesis Yields for Different Growth Conditions</i>	579
	<i>Analysis of Scaling Potential</i>	528		<i>Observed versus Synthesis Yield</i>	580
	<i>Scaling Control</i>	532	7-5	Microbial Growth Kinetics	580
	<i>Stabilization</i>	532		<i>Microbial Growth Kinetics Terminology</i>	581
6-8	Chemical Storage, Feeding, Piping, and Control Systems	532		<i>Rate of Utilization of Soluble Substrates</i>	581
	<i>Chemical Storage and Handling</i>	533		<i>Other Rate Expressions for the Utilization of Soluble Substrate</i>	582
	<i>Dry Chemical-Feed Systems</i>	533		<i>Rate of Soluble Substrate Production from Biodegradable Particulate Organic Matter</i>	583
	<i>Liquid Chemical-Feed Systems</i>	536		<i>Rate of Biomass Growth with Soluble Substrates</i>	584
	<i>Gas Chemical-Feed Systems</i>	537		<i>Kinetic Coefficients for Substrate Utilization and Biomass Growth</i>	584
	<i>Initial Chemical Mixing</i>	540		<i>Rate of Oxygen Uptake</i>	585
				<i>Effects of Temperature</i>	585
				<i>Total Volatile Suspended Solids and Active Biomass</i>	586
				<i>Net Biomass Yield and Observed Yield</i>	587
7	Fundamentals of Biological Treatment	545			
7-1	Overview of Biological Wastewater Treatment	547			
	<i>Objectives of Biological Treatment</i>	548			
	<i>Some Useful Definitions</i>	548			
	<i>Role of Microorganisms in Wastewater Treatment</i>	548			
	<i>Types of Biological Processes for Wastewater Treatment</i>	551			

7-6	Modeling Suspended Growth Treatment Processes	588	7-12	Anaerobic Fermentation and Oxidation	629
	<i>Description of Suspended Growth Treatment Processes</i>	589		<i>Process Description</i>	630
	<i>Biomass Mass Balance</i>	589		<i>Microbiology</i>	631
	<i>Substrate Mass Balance</i>	592		<i>Stoichiometry of Anaerobic Fermentation and Oxidation</i>	633
	<i>Mixed Liquor Solids Concentration and Solids Production</i>	592		<i>Growth Kinetics</i>	634
	<i>The Observed Yield</i>	595		<i>Environmental Factors</i>	635
	<i>Oxygen Requirements</i>	595	7-13	Biological Removal of Toxic and Recalcitrant Organic Compounds	635
	<i>Design and Operating Parameters</i>	598		<i>Development of Biological Treatment Methods</i>	635
	<i>Process Performance and Stability</i>	600		<i>Anaerobic Degradation</i>	637
	<i>Modeling Plug-Flow Reactors</i>	601		<i>Aerobic Biodegradation</i>	638
7-7	Substrate Removal in Attached Growth Treatment Processes	602		<i>Abiotic Losses</i>	638
	<i>Substrate Flux in Biofilms</i>	604		<i>Modeling Biotic and Abiotic Losses</i>	640
	<i>Substrate Mass Balance for Biofilm</i>	605	7-14	Biological Removal of Heavy Metals	644
	<i>Substrate Flux Limitations</i>	606			
7-8	Aerobic Biological Oxidation	607	8	Suspended Growth Biological Treatment Processes	659
	<i>Process Description</i>	608			
	<i>Microbiology</i>	608	8-1	Introduction to the Activated-Sludge Process	661
	<i>Stoichiometry of Aerobic Biological Oxidation</i>	609		<i>Historical Development</i>	661
	<i>Growth Kinetics</i>	610		<i>Description of Basic Process</i>	661
	<i>Environmental Factors</i>	610		<i>Evolution of the Activated-Sludge Process</i>	663
7-9	Biological Nitrification	611		<i>Recent Process Developments</i>	664
	<i>Process Description</i>	611	8-2	Wastewater Characterization	666
	<i>Microbiology</i>	611		<i>Key Wastewater Constituents for Process Design</i>	666
	<i>Stoichiometry of Biological Nitrification</i>	612		<i>Measurement Methods for Wastewater Characterization</i>	671
	<i>Growth Kinetics</i>	614		<i>Recycle Flows and Loadings</i>	676
	<i>Environmental Factors</i>	615	8-3	Fundamentals of Process Analysis and Control	676
7-10	Biological Denitrification	616		<i>Process Design Considerations</i>	677
	<i>Process Description</i>	616		<i>Process Control</i>	689
	<i>Microbiology</i>	618		<i>Operational Problems</i>	694
	<i>Stoichiometry of Biological Denitrification</i>	619		<i>Activated-Sludge Selector Processes</i>	700
	<i>Growth Kinetics</i>	621	8-4	Processes for BOD Removal and Nitrification	703
	<i>Environmental Factors</i>	623		<i>Process Design Considerations</i>	704
7-11	Biological Phosphorus Removal	623		<i>Complete-Mix Activated-Sludge Process</i>	705
	<i>Process Description</i>	624		<i>Sequencing Batch Reactor Process</i>	720
	<i>Microbiology</i>	625		<i>Staged Activated-Sludge Process</i>	734
	<i>Stoichiometry of Biological Phosphorus Removal</i>	627			
	<i>Growth Kinetics</i>	629			
	<i>Environmental Factors</i>	629			

	<i>Alternative Processes for BOD</i>			<i>Solids Separation</i>	820
	<i>Removal and Nitrification</i>	738		<i>Design of Solids Separation Facilities</i>	833
	<i>Process Design Parameters</i>	740	8-8	<i>Suspended Growth Aerated Lagoons</i>	840
	<i>Process Selection Considerations</i>	740		<i>Types of Suspended Growth</i>	
8-5	Processes for Biological			<i>Aerated Lagoons</i>	841
	Nitrogen Removal	749		<i>Process Design Considerations for</i>	
	<i>Overview of Biological Nitrogen-</i>			<i>Flow-Through Lagoons</i>	843
	<i>Removal Processes</i>	750		<i>Dual-Powered Flow-Through</i>	
	<i>Single-Sludge Biological Nitrogen-</i>		8-9	<i>Lagoon System</i>	853
	<i>Removal Processes</i>	750		Biological Treatment with	
	<i>Process Design Considerations</i>	753		Membrane Separation	854
	<i>Anoxic/Aerobic Process Design</i>	761		<i>Overview of Membrane</i>	
	<i>Step-Feed Anoxic/Aerobic</i>			<i>Biological Reactors</i>	854
	<i>Process Design</i>	765		<i>Process Description</i>	855
	<i>Intermittent Aeration Process Design</i>	776		<i>Membrane Fouling Control</i>	857
	<i>Postanoxic Endogenous Denitrification</i>	780		<i>Process Capabilities</i>	858
	<i>Sequencing Batch Reactor</i>		8-10	Simulation Design Models	859
	<i>Process Analysis</i>	781		<i>Model Matrix Format, Components,</i>	
	<i>Postanoxic Denitrification with</i>			<i>and Reactions</i>	860
	<i>an External Carbon Source</i>	784		<i>Model Applications</i>	861
	<i>Nitrogen Removal in Anaerobic</i>				
	<i>Digestion Recycle Streams</i>	788	9	Attached Growth and	
	<i>Alternative Process Configurations</i>			Combined Biological	
	<i>for Biological Nitrogen Removal</i>	789		Treatment Processes	887
	<i>Process Design Parameters</i>	789	9-1	Background	888
	<i>Process Selection Considerations</i>	789		<i>Evolution of Attached Growth Processes</i>	888
8-6	Processes for Biological			<i>Mass Transfer Limitations</i>	890
	Phosphorus Removal	799	9-2	Trickling Filters	890
	<i>Biological Phosphorus-</i>			<i>Trickling Filter Classification</i>	
	<i>Removal Processes</i>	799		<i>and Applications</i>	893
	<i>Process Design Considerations</i>	801		<i>Design of Physical Facilities</i>	896
	<i>Process Control</i>	804		<i>Process Design Considerations</i>	909
	<i>Solids Separation Facilities</i>	805		<i>Nitrification Design</i>	922
	<i>Methods to Improve Phosphorus-</i>		9-3	Rotating Biological Contactors	930
	<i>Removal Efficiency in BPR Systems</i>	805		<i>Process Design Considerations</i>	932
	<i>Biological Phosphorus-Removal</i>			<i>Physical Facilities for RBC Process</i>	935
	<i>Process Performance</i>	807		<i>RBC Process Design</i>	937
	<i>Alternative Processes for Biological</i>		9-4	Combined Aerobic Treatment Processes	940
	<i>Phosphorous Removal</i>	809		<i>Trickling Filter/Solids Contact</i>	
	<i>Process Design Parameters</i>	809		<i>and Trickling Filter/Activated-</i>	
	<i>Process Selection Considerations</i>	809		<i>Sludge Processes</i>	940
8-7	Selection and Design of Physical			<i>Activated Biofilter and Biofilter</i>	
	Facilities for Activated-Sludge			<i>Activated-Sludge Processes</i>	943
	Processes	816		<i>Series Trickling Filter-Activated-</i>	
	<i>Aeration System</i>	816		<i>Sludge Process</i>	944
	<i>Aeration Tanks and Appurtenances</i>	816			

	<i>Design Considerations for Combined Trickling Filter Activated-Sludge Systems</i>	944			<i>Ammonia Toxicity</i>	995	
9-5	Activated Sludge with Fixed-Film Packing	952			<i>Liquid-Solids Separation</i>	996	
	<i>Processes with Internal Suspended Packing for Attached Growth</i>	952	10-3		Anaerobic Suspended Growth Processes	996	
	<i>Processes with Internal Fixed Packing for Attached Growth</i>	955			<i>Complete-Mix Process</i>	997	
9-6	Submerged Attached Growth Processes	957			<i>Anaerobic Contact Process</i>	997	
	<i>Downflow Submerged Attached Growth Processes</i>	957			<i>Anaerobic Sequencing Batch Reactor Design of Anaerobic Suspended Growth Processes</i>	999	
	<i>Upflow Submerged Attached Growth Processes</i>	959	10-4		Anaerobic Sludge Blanket Processes	1005	
	<i>Fluidized-Bed Bioreactors (FBBR)</i>	961			<i>Upflow Sludge Blanket Reactor Process Design Considerations for UASB Process</i>	1007	
9-7	Attached Growth				<i>Anaerobic Baffled Reactor</i>	1016	
	Denitrification Processes	962	10-5		<i>Anaerobic Migrating Blanket Reactor</i>	1017	
	<i>Downflow Packed-Bed Postanoxic Denitrification Processes</i>	962			Attached Growth Anaerobic Processes	1018	
	<i>Upflow Packed-Bed Postanoxic Denitrification Reactors</i>	967			<i>Upflow Packed-Bed Attached Growth Reactor</i>	1019	
	<i>Fluidized-Bed Reactors for Postanoxic Denitrification</i>	967			<i>Upflow Attached Growth Anaerobic Expanded-Bed Reactor</i>	1020	
	<i>Submerged Rotating Biological Contactors</i>	969	10-6		Attached Growth Anaerobic Fluidized-Bed Reactor	1020	
	<i>Attached Growth Preanoxic Denitrification Processes</i>	969			<i>Downflow Attached Growth Processes</i>	1022	
10	Anaerobic Suspended and Attached Growth Biological Treatment Processes	983			Other Anaerobic Treatment Processes	1024	
10-1	The Rationale for Anaerobic Treatment	984			<i>Covered Anaerobic Lagoon Process</i>	1024	
	<i>Advantages of Anaerobic Treatment Processes</i>	984			<i>Membrane Separation Anaerobic Treatment Process</i>	1026	
	<i>Disadvantages of Anaerobic Treatment Processes</i>	986	11		Advanced Wastewater Treatment	1035	
	<i>Summary Assessment</i>	986			11-1	Need for Advanced Wastewater Treatment	1037
10-2	General Design Considerations for Anaerobic Treatment Processes	986			11-2	Technologies Used for Advanced Treatment	1038
	<i>Characteristics of the Wastewater Solids Retention Time</i>	991				<i>Residual Constituents in Treated Wastewater</i>	1038
	<i>Expected Methane Gas Production</i>	992				<i>Classification of Technologies</i>	1038
	<i>Treatment Efficiency Needed</i>	994				<i>Removal of Organic and Inorganic Colloidal and Suspended Solids</i>	1038
	<i>Sulfide Production</i>	994				<i>Removal of Dissolved Organic Constituents</i>	1040
						<i>Removal of Dissolved Inorganic Constituents</i>	1041
						<i>Removal of Biological Constituents</i>	1043
						<i>Process Selection and Performance Data</i>	1044

11-3	Introduction to Depth Filtration	1044	<i>Analysis and Design of Granular</i>	
	<i>Description of the Filtration Process</i>	1044	<i>Activated Carbon Contactor</i>	1152
	<i>Filter Hydraulics</i>	1050	<i>Small-Scale Column Tests</i>	1156
	<i>Analysis of the Filtration Process</i>	1057	<i>Analysis and Design of Powdered</i>	
11-4	Selection and Design Considerations for Depth Filters	1069	<i>Activated Carbon Contactor</i>	1159
	<i>Available Filtration Technologies</i>	1069	<i>Activated Sludge with Powdered</i>	
	<i>Performance of Different Types of</i> <i>Filter Technologies</i>	1078	<i>Activated Carbon Treatment</i>	1161
	<i>Issues Related to Design and</i> <i>Operation of Treatment Facilities</i>	1080	11-8 Gas Stripping	1162
	<i>Importance of Influent</i> <i>Wastewater Characteristics</i>	1081	<i>Analysis of Gas Stripping</i>	1163
	<i>Selection of Filtration Technology</i>	1081	<i>Design of Stripping Towers</i>	1174
