

EARTH LAB

Exploring the Earth Sciences

Owen / Pirie / Draper

Contents

SECTION 1

Introduction

INTRODUCTION

- The Scientific Method 1
- Organization of This Book 1
- The Scientific Method 1
- Special Features of the Earth Sciences 3
- Apply the Scientific Method to Your Own Life 4

LAB 1

- Introduction to Maps 5
 - Types of Maps 5
 - Map Legend 8
 - Scale 9
 - Global Location System: Latitude and Longitude 14
 - Map Grids and Orientation 17
 - Projections 20
 - U.S. Geological Survey Maps 25
 - Global Positioning System (GPS) 26

SECTION 2

The Solid Earth

LAB 2

- Physical Properties of Minerals 29
 - Definition of a Mineral 29
 - Types of Physical Properties Shown by Minerals 30
 - Determining the Properties of Minerals 35

LAB 3

- Rock-Forming Minerals 45
 - Mineral Identification and Recognition 45
 - Use of the Mineral Identification Tables 49
 - Classification of Minerals 54
 - Geologic Resources and Minerals 58

LAB 4

- Igneous Rocks 59
 - Mineralogical and Chemical Composition 59
 - Textures of Igneous Rocks 60
 - Classification and Identification of Igneous Rocks 70

LAB 5

- Sedimentary Rocks 75
 - Formation of Sedimentary Rocks 75
 - Sedimentary Environments 77
 - Clastic Sedimentary Rocks 86
 - Biochemical and Chemical Sedimentary Rocks 88
 - Identification and Description of Sedimentary Rocks 93

LAB 6

- Metamorphic Rocks 99
 - Textures of Metamorphic Rocks 100
 - Composition of Metamorphic Rocks 105
 - Types of Metamorphism 107
 - Temperature and Pressure 108
 - Classification of Metamorphic Rocks 112

LAB 7

- Rock Masses 119
 - Introduction to Geologic Maps and Cross Sections 119
 - Sedimentary Rock Masses 124
 - Igneous Rock Masses 126
 - Metamorphic Rock Masses 132
 - Structures and Deformation 135
 - Rocks in a Cross Section 143

LAB 8

- Geologic Time and Geologic History 145
 - Relative Age 145
 - Geologic History 151
 - Numerical Dating 155
 - Geologic Time Scale 167

LAB 9**Earth's Structure and Plate Tectonics 169**

- The Structure of Earth 169
- Divergent Plate Boundaries and Transform Faults 178
- Convergence, Subduction, and Mountain Building 188
- Geometric Fit of Continents 191

LAB 10**Earthquakes and Seismology 195**

- Earthquake Hazards 195
- The Origin of Earthquakes 201
- Seismic Waves 202
- Magnitude 205
- Locating an Earthquake 208

SECTION 3**Earth's Surface and the Fluid Earth****LAB 11****Topographic Maps 215**

- Topography and Contours 215
- Topographic Profiles 217
- Using and Constructing Topographic Maps 217
- Air Photos Give a View of the Third Dimension 223

LAB 12**Shorelines and Oceans 229**

- The Edge of the Oceans 229
- Shorelines 232
- Ocean Currents 236
- Ocean Salinity 239
- Nutrients in Seawater 241
- El Niño—La Niña 241

LAB 13**Groundwater and Karst Topography 251**

- Porosity 252
- Permeability and Flow Rate 252
- Water Table, Groundwater Flow, and Wells 255
- Groundwater Causes Erosion by Solution 263

LAB 14**Streams and Rivers 269**

- Stream Gradient 269
- Stream Erosion: Downward or Sideways? 277

LAB 15**Wind and the Atmosphere 289**

- Coriolis Effect 289
- Global Winds 291
- Humidity 294
- Weather 296
- Atmospheric Chemistry 306
- Greenhouse Effect 308
- Ozone Layer 312

SECTION 4**Resources****LAB 16****Geologic Maps 317**

- What is Shown on a Geologic Map 317
- Folds on Geologic Maps 320
- Faults on Geologic Maps 328
- Unconformities on Geologic Maps 325
- Igneous Contacts on Geologic Maps 339
- Drawing a Cross Section 339
- Making Geologic Maps from Field Investigations:
A Simulation 339

LAB 17**Resources 345**

- Fossil Fuels as Resources 345
- Carbon Cycle 358
- Mineral Resources 359

Glossary 371
