# A MANUAL OF PRACTICAL LABORATORY AND FIELD TECHNIQUES IN PALAEOBIOLOGY

## CONTENTS

Acknowledgements	vii
Foreword	ix
<b>I. INTRODUCTION</b>	
1 Palaeontological Techniques - an introduction to practical procedures	2
2 Documentation in the Laboratory	12
<b>II. FIELD TECHNIQUES</b>	
3 Field collecting procedures	20
4 Collecting techniques for microfossil and live foraminifera	27
5 Consolidation, stabilization and replication techniques	43
6 Field staining techniques for determining calcite, dolomite and phosphate	55
7 Field documentation, sample packing and transportation	59
<b>III. LABORATORY TECHNIQUES</b>	
<b>A. INTRODUCTION</b>	
8 Laboratory design and layout	64
9 Safety in the laboratory	68
10 Preservation, consolidation and repair of unstable specimens	82
11 Preparation of recent material for comparative studies	98
<b>B. PHYSICAL PROCEDURES</b>	
12 Mechanical methods for preparing fossil specimens	110
13 Fossil extraction techniques by thermal disintegration	120
14 Disaggregation and dispersal of partially consolidated and unconsolidated sediments	127
15 Microfossil sample contamination and reliability problems	138
16 Washing and sieving techniques used in micropalaeontology	146
17 Centrifuge techniques used in micropalaeontology	154
18 Mechanical separation of microfossil residues	160
19 Flotation and liquid separation techniques	168
20 Thin section and slide preparation techniques of macro and microfossil specimens	182
21 Staining techniques used in micropalaeontology	211
22 Preparation of carbonate stained acetate peels and thin sections	219
23 Preparation of amber specimens containing fossils	234
24 Preparation and conservation of vertebrate fossils	242
<b>C. CHEMICAL PROCEDURES</b>	
25 Extraction techniques for palaeobotanical and palynological material	256
26 Extraction techniques for acid insoluble microfossils	288
27 Extraction techniques for phosphatic fossils	318
28 Extraction techniques for uncrushed graptolites	331

29	Extraction techniques for calcareous microfossils from argillaceous sediments	334
30	Extraction techniques for calcareous microfossils from carbonate sediments	342
31	Extraction techniques for agglutinated foraminifera from calcareous sediments	350
32	Specialist techniques used in the preparation of individual microfossil specimens	355
33	Extraction techniques for calcareous nannofossils	366
<b>D. ANALYTICAL PROCEDURES</b>		
34	Electron microscopy techniques	376
35	X-radiography techniques	391
<b>E. EXHIBITION OF FOSSIL MATERIAL</b>		
36	Fossil replication techniques	400
37	Photomacrography and photomicrography techniques	418
38	Illustrating and exhibiting for display and publication	441
<b>REFERENCES</b>		450
<b>APPENDIX</b>		
1	Equipment and chemical suppliers	490
2	Describing sedimentary rocks and fossils	498
3	Centrifuge times for bromoform separation and water/acetone residue washing	503
4	Hazard symbols	506
5	Respirator and filter cartridge colour coding	507
6	Fire extinguisher classification	507
7	Laboratory glove resistance properties	508
8	Care and handling of hydrofluoric acid	511
9	Spillage and disposal of unwanted chemicals	514
10	Conversion data	515
	(i) Temperature	
	(ii) Weight	
	(iii) Volume	
	(iv) Length	
11	Formulae for the preparation of standard solutions	516
	(i) Weight % (w/w)	
	(ii) Volume % (v/v)	
	(iii) Weight/Volume % (w/v)	
	(iv) Mole Fraction	
	(v) Standard solutions
