Contents

PART ONE Introduction

1 Introduction to Biochemistry 3

- 1.1 Biochemistry Is a Modern Science 4
- 1.2 The Chemical Elements of Life 5
- 1.3 Many Important Biomolecules Are Polymers 8
 - A. Proteins 8
 - B. Polysaccharides 9
 - C. Nucleic Acids 10
 - D. Lipids and Membranes 12
- 1.4 The Energetics of Life 14
- 1.5 Biochemistry and Evolution 15
- 1.6 The Cell Is the Basic Unit of Life 15
- 1.7 Prokaryotic Cells: Structural Features 16
- 1.8 Eukaryotic Cells: Structural Features 17
 - A. The Nucleus 17
 - B. The Endoplasmic Reticulum and Golgi Apparatus 19
 - C. Mitochondria and Chloroplasts 19
 - D. Specialized Vesicles 20
 - E. The Cytoskeleton 21
- 1.9 A Picture of the Living Cell 21
- 1.10 Biochemistry Is Multidisciplinary 23
- Appendix: The Special Terminology of Biochemistry 23
- Selected Readings 24

2 Water 25

- 2.1 The Water Molecule Is Polar 26
- 2.2 Hydrogen Bonding in Water 27
- 2.3 Ionic and Polar Substances Dissolve in Water 28
- 2.4 Nonpolar Substances Are Insoluble in Water 29

- 2.5 Noncovalent Interactions in Biomolecules 31
 - A. Charge-Charge Interactions 31
 - B. Hydrogen Bonds 31
 - C. Van der Waals Forces 32
 - D. Hydrophobic Interactions 33
- 2.6 Water Is Nucleophilic 33
- 2.7 Ionization of Water 35
- 2.8 The pH Scale 36
- 2.9 Acid Dissociation Constants of Weak Acids 37
- 2.10 Buffered Solutions Resist Changes in pH 40
 - Summary 43
 - Problems 43
 - Selected Readings 45

PART TWO

Structure and Function of Biomolecules

- 3 Amino Acids and the Primary Structures of Proteins 51**
 - 3.1 General Structure of Amino Acids 52
 - Box 3.1 An Alternative Nomenclature* 54
 - 3.2 Structures of the 20 Common Amino Acids 55
 - A. Aliphatic R Groups 55
 - B. Aromatic R Groups 56
 - C. Sulfur-Containing R Groups 57
 - D. Side Chains with Alcohol Groups 57
 - E. Basic R Groups 58
 - F. Acidic R Groups and Their Amide Derivatives 58
 - G. The Hydrophobicity of Amino Acid Side Chains 58
 - 3.3 Other Amino Acids and Amino Acid Derivatives 59
 - 3.4 Ionization of Amino Acids 60
 - 3.5 Peptide Bonds Link Amino Acids in Proteins 64
 - 3.6 Protein Purification Techniques 66
 - 3.7 Amino Acid Composition of Proteins 69
 - 3.8 Determining the Sequence of Amino Acid Residues 70
 - 3.9 Protein Sequencing Strategies 73
 - 3.10 Comparisons of the Primary Structures of Proteins Reveal Evolutionary Relationships 77
 - Summary 78
 - Problems 79
 - Selected Readings 80

- 4 Proteins: Three-Dimensional Structure and Function 81**

- 4.1 There Are Four Levels of Protein Structure 83
- 4.2 Methods for Determining Protein Structure 84
- 4.3 The Conformation of the Peptide Group 86
- 4.4 The α Helix 89

- 4.5 β Strands and β Sheets 92
- 4.6 Loops and Turns 94
- 4.7 Tertiary Structure of Proteins 96
 - A. Supersecondary Structures 96
 - B. Domains 97
 - C. Domain Structure and Function 102
- 4.8 Quaternary Structure 102
- 4.9 Protein Denaturation and Renaturation 104
- 4.10 Protein Folding and Stability 107
 - A. The Hydrophobic Effect 107
 - B. Hydrogen Bonding 109
 - C. Van der Waals Interactions and Charge-Charge Interactions 110
 - D. Protein Folding Is Assisted by Chaperones 110
- 4.11 Collagen, a Fibrous Protein 112
- 4.12 Structures of Myoglobin and Hemoglobin 114
- 4.13 Oxygen Binding to Myoglobin and Hemoglobin 116
 - A. Oxygen Binds Reversibly to Heme 116
 - B. Oxygen-Binding Curves of Myoglobin and Hemoglobin 117
 - C. Hemoglobin Is an Allosteric Protein 119
- 4.14 Antibodies Bind Specific Antigens 121
 - Summary 124
 - Problems 125
 - Selected Readings 127

5 Properties of Enzymes 130

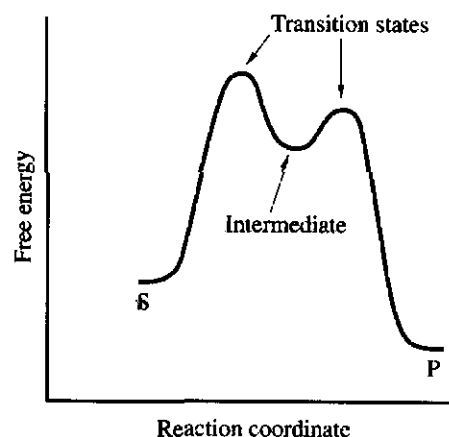

- 5.1 The Six Classes of Enzymes 131
- 5.2 Kinetic Experiments Reveal Enzyme Properties 133
 - A. Chemical Kinetics 133
 - B. Enzyme Kinetics 134
- 5.3 The Michaelis-Menten Equation 135
 - A. Derivation of the Michaelis-Menten Equation 137
 - B. The Meanings of K_m 138
- 5.4 Kinetic Constants Indicate Enzyme Activity and Specificity 139
- 5.5 Measurement of K_m and V_{max} 140
- 5.6 Kinetics of Multisubstrate Reactions 141
- 5.7 Reversible Enzyme Inhibition 142
 - A. Competitive Inhibition 143
 - B. Uncompetitive Inhibition 145
 - C. Noncompetitive Inhibition 146
 - D. Uses of Enzyme Inhibition 146
- 5.8 Irreversible Enzyme Inhibition 147
- 5.9 Site-Directed Mutagenesis Modifies Enzymes 148
- 5.10 Regulation of Enzyme Activity 148
 - A. Phosphofructokinase Is an Allosteric Enzyme 149
 - B. General Properties of Allosteric Enzymes 150
 - C. Two Theories of Allosteric Regulation 152
 - D. Regulation by Covalent Modification 154

- 5.11 Multienzyme Complexes and Multifunctional Enzymes 155
 Summary 156
 Problems 156
 Selected Readings 159

6 Mechanisms of Enzymes 162

- 6.1 The Terminology of Mechanistic Chemistry 162
 6.2 Catalysts Stabilize Transition States 164
 6.3 Chemical Modes of Enzymatic Catalysis 166
 A. Polar Amino Acid Residues in Active Sites 166
 B. Acid-Base Catalysis 167
 C. Covalent Catalysis 168
 D. pH Affects Enzymatic Rates 169
 6.4 Diffusion-Controlled Reactions 170
 A. Triose Phosphate Isomerase 171
 B. Superoxide Dismutase 173
 6.5 Binding Modes of Enzymatic Catalysis 174
 A. The Proximity Effect 175
 B. Weak Binding of Substrates to Enzymes 177
 C. Transition-State Stabilization 178
 6.6 Induced Fit 180
 6.7 Lysozyme Binds an Ionic Intermediate Tightly 182
Box 6.1 Proposed Transition State for a Bimolecular Reaction 185
 6.8 Properties of Serine Proteases 185
 A. Zymogens Are Inactive Enzyme Precursors 186
 B. Substrate Specificity of Serine Proteases 187
 C. Serine Proteases Use Both the Chemical and the Binding Modes of Catalysis 188
 Summary 192
 Problems 193
 Selected Readings 195

7 Coenzymes and Vitamins 197

- 7.1 Many Enzymes Require Inorganic Cations 198
 7.2 Coenzyme Classification 199
 A. Metabolite Coenzymes 199
Box 7.1 Nucleosides and Nucleotides 200
 B. Vitamin-Derived Coenzymes and Nutrition 202
Box 7.2 Vitamin C: A Vitamin but Not a Coenzyme 202
 7.3 NAD^+ and NADP^+ 203
Box 7.3 NAD Binding to Dehydrogenases 206
 7.4 FAD and FMN 207
Box 7.4 An FAD-Requiring Hydroxylase That Has a Unique Test for Its Proper Substrate 208
 7.5 Coenzyme A 209
 7.6 Thiamine Pyrophosphate 211
 7.7 Pyridoxal Phosphate 212
 7.8 Biotin 215

- 7.9 Tetrahydrofolate 216
- 7.10 Cobalamin 218
- 7.11 Lipoamide 219
- 7.12 Lipid Vitamins 220
 - A. Vitamin A 220
 - B. Vitamin D 221
 - C. Vitamin E 221
 - D. Vitamin K 222
- 7.13 Ubiquinone 222
- 7.14 Protein Coenzymes 223
- 7.15 Cytochromes 224
- Summary 226
- Problems 227
- Selected Readings 230

8 Carbohydrates 231

- 8.1 Most Monosaccharides Are Chiral Compounds 232
- 8.2 Cyclization of Aldoses and Ketoses 236
- 8.3 Conformations of Monosaccharides 238
- 8.4 Derivatives of Monosaccharides 240
 - A. Sugar Phosphates 240
 - B. Deoxy Sugars 240
 - C. Amino Sugars 240
 - D. Sugar Alcohols 242
 - E. Sugar Acids 242
 - F. Ascorbic Acid 243
- 8.5 Disaccharides and Other Glycosides 243
 - A. Structures of Disaccharides 243
 - B. Reducing and Nonreducing Sugars 245
 - C. Nucleosides and Other Glycosides 245
- 8.5.1 Nodulation Factors Are Lipo-oligosaccharides 246
- 8.6 Polysaccharides 246
 - A. Starch and Glycogen 247
 - B. Cellulose and Chitin 249
- 8.7 Glycoconjugates 251
 - A. Proteoglycans 251
 - 8.7.1 Decorin and Collagen 253
 - B. Peptidoglycans 253
 - C. Glycoproteins 254
- Summary 258
- Problems 259
- Selected Readings 261

9 Lipids and Membranes 264

- 9.1 Structural and Functional Diversity of Lipids 264
- 9.2 Fatty Acids 265
 - 9.2.1 *Trans* Fatty Acids and Margarine 268
- 9.3 Triacylglycerols 269

- 9.4 Glycerophospholipids 270
- 9.5 Sphingolipids 272
- 9.6 Steroids 274
- 9.7 Other Biologically Important Lipids 276
- Box 9.2* Special Nonaqueous Techniques Must Be Used to Study Lipids 278
- 9.8 Biological Membranes Are Composed of Lipid Bilayers and Proteins 279
 - A. Lipid Bilayers 280
 - B. Fluid Mosaic Model of Biological Membranes 281
- 9.9 Lipid Bilayers and Membranes Are Dynamic Structures 282
- 9.10 Three Classes of Membrane Proteins 285
- 9.11 Membrane Transport 287
 - A. Pores and Channels 288
 - B. Passive Transport 289
 - C. Active Transport 290
 - D. Endocytosis and Exocytosis 291
- Box 9.3* The Hot Spice of Chili Peppers 292
- 9.12 Transduction of Extracellular Signals 293
 - A. G Proteins Are Signal Transducers 294
 - B. The Adenylyl Cyclase Signaling Pathway 295
 - C. The Inositol-Phospholipid Signaling Pathway 297
- Box 9.4* Bacterial Toxins and G Proteins 298
- D. Receptor Tyrosine Kinases 300
- Summary 301
- Problems 302
- Selected Readings 303

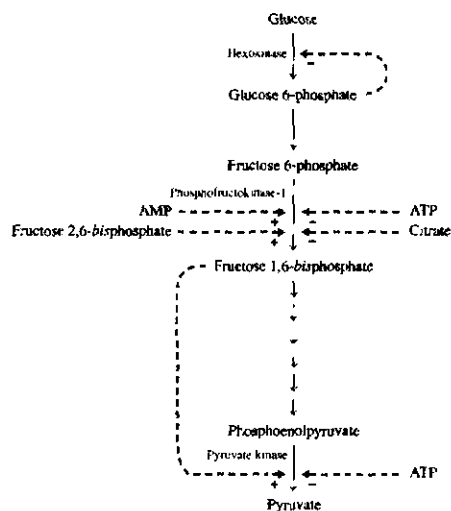

PART THREE

Metabolism and Bioenergetics

10 Introduction to Metabolism 309

- 10.1 Metabolism Is the Sum of Cellular Reactions 309
 - A. Metabolic Pathways Are Sequences of Reactions 311
 - B. Metabolism Proceeds by Discrete Steps 312
- 10.2 Metabolic Pathways Are Regulated 313
- 10.3 Major Pathways in Cells 315
- 10.4 Compartmentation and Interorgan Metabolism 317
- 10.5 Thermodynamics and Metabolism 318
 - Box 10.1* Metabolic Pathways Are in a Steady State 319
 - A. Free-Energy Change 319
 - B. Equilibrium Constants and Standard Free-Energy Changes 320
 - C. Actual Free-Energy Change, Not Standard Free-Energy Change, Determines the Spontaneity of Cellular Reactions 321
- 10.6 The Free Energy of ATP 322
- 10.7 The Metabolic Roles of ATP 326
 - A. Phosphoryl-Group Transfer 327
 - B. Production of ATP by Phosphoryl-Group Transfer 327
 - C. Nucleotidyl-Group Transfer 328
- 10.8 Thioesters Have High Free Energies of Hydrolysis 329

- 10.9 Reduced Coenzymes Conserve Energy from Biological Oxidations 330
 - A. Free-Energy Change Is Related to Reduction Potential 331
 - B. Electron Transfer from NADH Provides Free Energy 333
- Box 10.2 NAD⁺ and NADH Differ in Their Ultraviolet Absorption Spectra 333
- 10.10 Experimental Methods for Studying Metabolism 335
 - Summary 336
 - Problems 336
 - Selected Readings 337

11 Glycolysis 340

- 11.1 Glycolysis Is a Ubiquitous Pathway 341
 - Box 11.1 Elucidation of the Glycolytic Pathway 344
- 11.2 Glycolysis Has 10 Enzyme-Catalyzed Steps 345
 - Box 11.2 Arsenate Poisoning 351
- 11.3 The Fate of Pyruvate 354
 - A. Metabolism of Pyruvate to Ethanol 355
 - B. Reduction of Pyruvate to Lactate 355
- 11.4 Free-Energy Changes in Glycolysis 356
- 11.5 Regulation of Glycolysis 357
 - A. Regulation of Hexose Transporters 357
 - B. Regulation of Hexokinase 359
- Box 11.3 Glucose 6-Phosphate Has a Pivotal Metabolic Role in Liver 359
- C. Regulation of Phosphofructokinase-1 360
- D. Regulation of Pyruvate Kinase 361
- E. The Pasteur Effect 363
- 11.6 Other Sugars Can Enter Glycolysis 363
 - A. Fructose Is Converted to Glyceraldehyde 3-Phosphate 363
 - B. Galactose Is Converted to Glucose 1-Phosphate 364
 - C. Mannose Is Converted to Fructose 6-Phosphate 365
- 11.7 Formation of 2,3-Bisphosphoglycerate in Red Blood Cells 365
 - Summary 366
 - Problems 367
 - Selected Readings 368

12 The Citric Acid Cycle 372

- 12.1 Entry of Pyruvate into the Mitochondrion 373
- 12.2 Conversion of Pyruvate to Acetyl CoA 373
- 12.3 The Citric Acid Cycle Oxidizes Acetyl CoA 377
- 12.4 The Citric Acid Cycle Can Be a Multistep Catalyst 379
 - Box 12.1 Three-Point Attachment of Prochiral Substrates to Enzymes 383
- 12.5 Reduced Coenzymes Fuel the Production of ATP 387
- 12.6 Regulation of the Citric Acid Cycle 388
- 12.7 Entry and Exit of Metabolites 391
- 12.8 The Glyoxylate Cycle 393
 - Summary 396
 - Problems 397
 - Selected Readings 398

13 Additional Pathways in Carbohydrate Metabolism 399

- 13.1 Glycogen Degradation 400
 - A. Glycogen Phosphorylase 400
 - B. Metabolism of Glucose 1-Phosphate 402
- 13.2 Glycogen Synthesis 402
 - Box 13.1* Glycogen Storage Diseases 403
- 13.3 Regulation of Glycogen Metabolism 404
 - A. Hormones Regulate Glycogen Metabolism 404
 - B. Reciprocal Regulation of Glycogen Phosphorylase and Glycogen Synthase 405
 - C. Intracellular Regulation of Glycogen Metabolism Involves Interconvertible Enzymes 406
- 13.4 Gluconeogenesis 408
- 13.5 Precursors for Gluconeogenesis 412
 - A. Lactate 412
 - B. Amino Acids 412
 - C. Glycerol 413
 - D. Propionate and Lactate 413
- 13.6 Subcellular Locations of Gluconeogenic Enzymes 414
- 13.7 Regulation of Gluconeogenesis 415
 - Box 13.2* Glucose Is Sometimes Converted to Sorbitol 417
- 13.8 The Pentose Phosphate Pathway 417
- 13.9 Interconversions Catalyzed by Transketolase and Transaldolase 421
- 13.10 Maintenance of Glucose Levels in Mammals 424
 - Summary 426
 - Problems 427
 - Selected Readings 428

14 Electron Transport and Oxidative Phosphorylation 429

- 14.1 Superoxide Anions 430
- 14.2 Cytochrome P450 431
- 14.3 Hydrogenase and Fumarate Reductase 431
- 14.4 Oxidative Phosphorylation in Mitochondria 432
- 14.5 The Mitochondrion 434
- 14.6 The Chemiosmotic Theory 435
 - Box 14.1* New Lipid Vesicles, or Liposomes 437
- 14.7 The Protonmotive Force 438
- 14.8 Overview of Electron Transport 440
 - A. Complexes I Through IV 440
 - B. Cofactors in Electron Transport 443
- 14.9 Complex I 443
- 14.10 Complex II 444
- 14.11 Complex III 445
- 14.12 Complex IV 447
- 14.13 Complex V: ATP Synthase 449

- 14.14 Active Transport of ATP, ADP, and P_i Across the Mitochondrial Membrane 452
- 14.15 The P/O Ratio 452
 - Box 14.2* Are Proton Leaks Functional? 453
- 14.16 Aerobic Oxidation of Cytosolic NADH 453
- 14.17 Regulation of Oxidative Phosphorylation 456
 - Summary 456
 - Problems 457
 - Selected Readings 458

15 Photosynthesis 462

- 15.1 Photosynthesis Consists of Two Major Processes 463
- 15.2 The Chloroplast 463
- 15.3 Chlorophyll and Other Pigments Capture Light 464
 - A. Light-Capturing Pigments 465
 - B. Photosystems 467
- 15.4 Electron Transport in Photosynthesis 467
 - A. Electron Transport from PSII through Cytochrome *bf* 470
 - B. PSI and Beyond 471
- 15.5 Photophosphorylation and Cyclic Electron Flow 473
- 15.6 The Dark Reactions 474
- 15.7 Ribulose 1,5-Bisphosphate Carboxylase-Oxygenase 474
- 15.8 The RPP Cycle 477
- 15.9 Oxygenation of Ribulose 1,5-Bisphosphate 479
- 15.10 Additional Carbon-Fixing Pathways 480
 - A. The C_4 Pathway Concentrates CO_2 480
 - B. Nocturnal CO_2 Fixation 480
- 15.11 Synthesis of Sucrose and Starch from RPP Metabolites 482
 - Summary 485
 - Problems 485
 - Selected Readings 487

16 Lipid Metabolism 490

- 16.1 Absorption and Mobilization of Fatty Acids 490
 - A. Absorption of Dietary Lipids 491
 - B. Lipoproteins 492
 - Box 16.1* Our High-Fat Diets 492
 - C. Storage and Mobilization of Fatty Acids 495
- 16.2 Fatty Acid Oxidation 496
 - A. Activation of Fatty Acids 496
 - B. Transport of Fatty Acyl CoA into Mitochondria 496
 - C. The Reactions of β -Oxidation 497
 - D. ATP Generation from Fatty Acid Oxidation 499
- 16.3 β -Oxidation of Odd-Chain and Unsaturated Fatty Acids 499
- 16.4 Ketone Bodies Are Fuel Molecules 502
 - A. Ketone Bodies Are Synthesized in the Liver 502
 - B. Ketone Bodies Are Oxidized in Mitochondria 503
 - Box 16.2* Altered Carbohydrate and Lipid Metabolism in Diabetes 504

- 16.5 Fatty Acid Synthesis 505
 - A. Transport of Acetyl CoA to the Cytosol 506
 - B. Carboxylation of Acetyl CoA 507
 - C. The Reactions of Fatty Acid Synthesis 507
- 16.6 Fatty Acid Elongation and Desaturation 511
- 16.7 Regulation of Fatty Acid Oxidation 512
- 16.8 Synthesis of Eicosanoids 513
- 16.9 Synthesis of Triacylglycerols and Glycerophospholipids 514
 - Box 16.1* Search for a Replacement for Aspirin 515
- 16.10 Synthesis of Ether Lipids 518
- 16.11 Synthesis of Sphingolipids 518
 - Box 16.2* Lysosomal Storage Diseases 521
- 16.12 Synthesis of Cholesterol 522
 - A. Stage 1: Acetyl CoA to Isopentenyl Pyrophosphate 522
 - B. Stage 2: Isopentenyl Pyrophosphate to Squalene 523
 - C. Stage 3: Squalene to Cholesterol 525
 - D. Other Products of Cholesterol Metabolism 525
- 16.13 Lipids Are Made at a Variety of Sites 526
 - Box 16.3* Acetyl CoA Is a Major Metabolite in Liver 526
 - Summary 527
 - Problems 528
 - Selected Readings 529

17 Amino Acid Metabolism 530

- 17.1 The Nitrogen Cycle and Nitrogen Fixation 531
- 17.2 Assimilation of Ammonia 533
 - A. Ammonia Is Incorporated into Glutamate 533
 - B. Glutamine Is a Nitrogen Carrier 534
 - C. Regulation of Glutamine Synthetase in *E. coli* 535
 - Box 17.1* How Some Enzymes Transfer Ammonia from Glutamine 535
- 17.3 Transamination Reactions 537
- 17.4 Synthesis of Nonessential Amino Acids 539
 - A. Alanine, Asparagine, Aspartate, Glutamate, and Glutamine 539
 - B. Serine, Glycine, and Cysteine 540
 - C. Proline and Arginine 542
 - D. Tyrosine 542
 - Box 17.2* Phenylketonuria, a Defect in Tyrosine Formation 543
- 17.5 Synthesis of Essential Amino Acids 544
 - A. Lysine, Methionine, Threonine, and the Branched-Chain Amino Acids 544
 - B. Histidine 545
 - C. Aromatic Amino Acids 546
- 17.6 Protein Turnover 549
- 17.7 Apoptosis—Programmed Cell Death 549
- 17.8 Amino Acid Catabolism 550
- 17.9 The Urea Cycle Converts Ammonia into Urea 550
 - A. The Reactions of the Urea Cycle 552
 - Box 17.3* The Liver Is Organized for Removing Toxic Ammonia 553
 - B. Ancillary Reactions of the Urea Cycle 554

- 17.10 Catabolism of the Carbon Chains of Amino Acids 555
 - A. Alanine, Asparagine, Aspartate, Glutamate, and Glutamine 556
 - B. Arginine, Histidine, and Proline 556
 - C. Glycine and Serine 557
 - D. Threonine 558
 - E. The Branched-Chain Amino Acids 559
 - F. Methionine 560
 - G. Cysteine 561
 - H. Phenylalanine, Tryptophan, and Tyrosine 561
 - I. Lysine 562
 - Diseases of Amino Acid Metabolism 562
- 17.11 Renal Glutamine Metabolism Produces Bicarbonate 563
- 17.12 Synthesis of Nitric Oxide from Arginine 564
 - Summary 565
 - Problems 565
 - Selected Readings 567

18 Nucleotide Metabolism 568

- 18.1 Synthesis of Purine Nucleotides 569
- 18.2 Other Purine Nucleotides Are Synthesized from IMP 572
- 18.3 Synthesis of Pyrimidine Nucleotides 574
 - A. The Pathway for *De Novo* Pyrimidine Synthesis 574
 - B. Regulation of *De Novo* Pyrimidine Synthesis 576
- 18.4 CTP Is Synthesized from UMP 578
- 18.5 Reduction of Ribonucleotides to Deoxyribonucleotides 579
- 18.6 Methylation of dUMP Produces dTMP 580
 - Box 18-1 Free Radicals in the Reduction of Ribonucleotides 581
- 18.7 Salvage of Purines and Pyrimidines 584
- 18.8 Purine Catabolism 586
 - Box 18-2 Adenosine Has Hormone and Neurotransmitter Properties 587
- 18.9 The Purine Nucleotide Cycle in Muscle 589
- 18.10 Pyrimidine Catabolism 591
 - Summary 591
 - Problems 592
 - Selected Readings 593

PART FOUR Biological Information Flow

19 Nucleic Acids 599

- 19.1 Nucleotides Are the Building Blocks of Nucleic Acids 600
 - A. Ribose and Deoxyribose 600
 - B. Purines and Pyrimidines 601
 - C. Nucleosides 602
 - D. Nucleotides 604

- 19.2 DNA Is Double-Stranded 606
 - A. Nucleotides Are Joined by 3'–5' Phosphodiester Linkages 607
 - B. Two Antiparallel Strands Form a Double Helix 609
 - C. Weak Forces Stabilize the Double Helix 610
 - D. Conformations of Double-Stranded DNA 613
- 19.3 DNA Can Be Supercoiled 614
- 19.4 Cells Contain Several Kinds of RNA 615
- 19.5 DNA Is Packaged in Chromatin in Eukaryotic Cells 616
 - A. Nucleosomes 617
 - Histones Can Be Acetylated and Deacetylated 619
 - B. Higher Levels of Chromatin Structure 619
 - C. Bacterial DNA Packaging 620
- 19.6 Nucleases and Hydrolysis of Nucleic Acids 621
 - A. Alkaline Hydrolysis of RNA 621
 - B. Ribonuclease-Catalyzed Hydrolysis of RNA 623
 - C. Restriction Endonucleases 623
 - D. *EcoRI* Binds Tightly to DNA 626
- 19.7 Uses of Restriction Endonucleases 627
 - Summary 629
 - Problems 629
 - Selected Readings 631

20 DNA Replication, Repair, and Recombination 632

- 20.1 Chromosomal DNA Replication Is Bidirectional 633
- 20.2 DNA Polymerase 635
 - A. Chain Elongation Is a Nucleotidyl-Group-Transfer Reaction 637
 - B. DNA Polymerase III Remains Bound to the Replication Fork 637
 - C. Proofreading Corrects Polymerization Errors 638
- 20.3 DNA Polymerase Synthesizes Two Strands Simultaneously 639
 - A. Lagging-Strand Synthesis Is Discontinuous 639
 - B. Each Okazaki Fragment Begins with an RNA Primer 640
 - C. Okazaki Fragments Are Joined by the Action of DNA Polymerase I and DNA Ligase 641
- 20.4 Model of the Replisome 644
- 20.5 Initiation and Termination of DNA Replication 646
- 20.6 Sequencing DNA Using Dideoxynucleotides 647
- 20.7 DNA Replication in Eukaryotes 649
- 20.8 Repair of Damaged DNA 650
 - A. Repair after Photodimerization: An Example of Direct Repair 651
 - B. Excision Repair 652
- 20.9 Homologous Recombination 655
 - A. The Holliday Model of General Recombination 655
 - B. Recombination in *E. coli* 657
 - C. Recombination Can Be a Form of Repair 658
 - Summary 660
 - Problems 661
 - Selected Readings 663

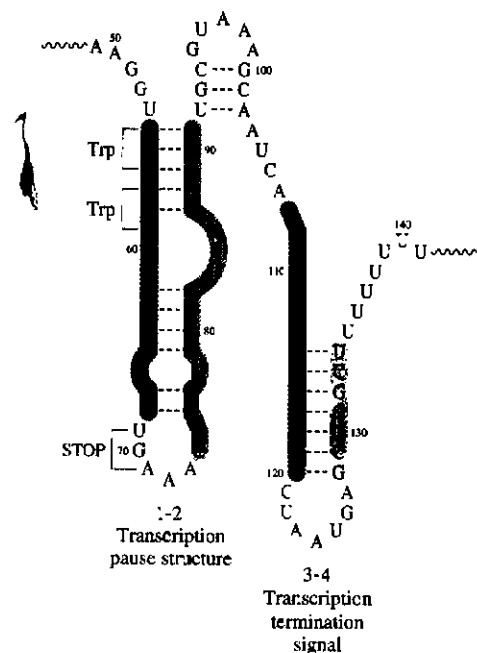

21 Transcription and RNA Processing 666

- 21.1 Types of RNA 667
- 21.2 RNA Polymerase 668
 - A. RNA Polymerase Is an Oligomeric Protein 668
 - B. The Chain Elongation Reaction 669
- 21.3 Transcription Initiation 670
 - A. Genes Have a 5' → 3' Orientation 671
 - B. The Transcription Complex Assembles at a Promoter 671
 - C. The σ Subunit Recognizes the Promoter 673
 - D. RNA Polymerase Changes Conformation 674
- 21.4 Transcription Termination 676
- 21.5 Transcription in Eukaryotes 678
 - A. Eukaryotic RNA Polymerases 678
 - B. Eukaryotic Transcription Factors 678
- 21.6 Transcription of Genes Is Regulated 681
- 21.7 The *lac* Operon, an Example of Negative and Positive Regulation 683
 - A. *lac* Repressor Blocks Transcription 683
 - B. The Structure of *lac* Repressor 684
 - C. cAMP Regulatory Protein Activates Transcription 686
- 21.8 Posttranscriptional Modification of RNA 689
 - A. Transfer RNA Processing 689
 - B. Ribosomal RNA Processing 689
- 21.9 Eukaryotic mRNA Processing 691
 - A. Eukaryotic mRNA Molecules Have Modified Ends 691
 - B. Some Eukaryotic mRNA Precursors Are Spliced 693
- Summary 698
- Problems 698
- Selected Readings 699

22 Protein Synthesis 700

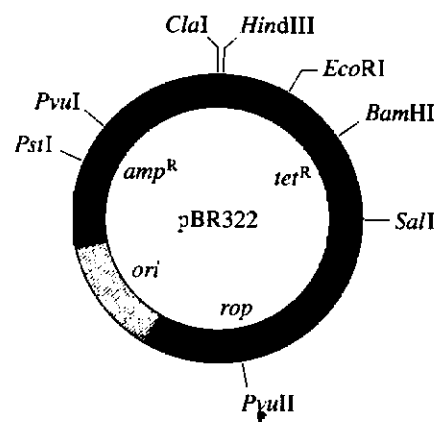

- 22.1 The Genetic Code 700
- 22.2 Transfer RNA 703
 - A. The Three-Dimensional Structure of tRNA 703
 - B. tRNA Anticodons Base-Pair with mRNA Codons 705
- 22.3 Aminoacyl-tRNA Synthetases 706
 - A. The Aminoacyl-tRNA Synthetase Reaction 706
 - B. Specificity of Aminoacyl-tRNA Synthetases 708
 - C. Proofreading Activity of Aminoacyl-tRNA Synthetases 709
- 22.4 Ribosomes 709
 - A. Ribosomes Are Composed of Both Ribosomal RNA and Protein 710
 - B. Ribosomes Contain Two Aminoacyl-tRNA Binding Sites 711
- 22.5 Initiation of Translation 712
 - A. Initiator tRNA 712
 - B. Initiation Complexes Assemble Only at Initiation Codons 712
 - C. Initiation Factors Help Form the Initiation Complex 713
 - D. Translation Initiation in Eukaryotes 715

- 22.6 Chain Elongation Is a Three-Step Microcycle 715
 - A. Elongation Factors Dock an Aminoacyl-tRNA in the A Site 716
 - B. Peptidyl Transferase Catalyzes Peptide Bond Formation 718
 - C. Translocation Moves the Ribosome by One Codon 720
- 22.7 Termination of Translation 720
- 22.8 Protein Synthesis Is Energetically Expensive 722
- 22.9 Regulation of Protein Synthesis 722
 - A. Ribosomal Protein Synthesis Is Coupled to Ribosome Assembly in *E. coli* 722
 - Some Antibiotics Inhibit Protein Synthesis 723
 - B. Globin Synthesis Depends on Heme Availability 724
 - C. The *E. coli trp* Operon Is Regulated by Repression and Attenuation 725
- 22.10 Posttranslational Processing 728
 - A. The Signal Hypothesis 728
 - B. Glycosylation of Proteins 732
- Summary 733
- Problems 733
- Selected Readings 734

23 Recombinant DNA Technology 735

- 23.1 Making Recombinant DNA 735
- 23.2 Cloning Vectors 737
 - A. Plasmid Vectors 739
 - B. Bacteriophage λ Vectors 739
 - C. Shuttle Vectors 741
 - D. Yeast Artificial Chromosomes as Vectors 741
- 23.3 Identification of Host Cells Containing Recombinant DNA 742
 - A. Selection Strategies Use Marker Genes 742
 - B. Selection in Eukaryotes 743
 - C. Visual Markers: Insertional Inactivation of the β -Galactosidase Gene 744
- 23.4 Genomic Libraries 744
 - Box 23.1* The Human Genome Project 745
- 23.5 cDNA Libraries Are Made from Messenger RNA 745
- 23.6 Screening a Library 747
- 23.7 Chromosome Walking 749
- 23.8 Expression of Proteins Using Recombinant DNA Technology 750
 - A. Prokaryotic Expression Vectors 750
 - B. Expression of Proteins in Eukaryotes 751
- 23.9 Applications of Recombinant DNA Technology 753
 - A. Genetic Engineering of Plants 753
 - B. Genetic Engineering in Prokaryotes 755
- 23.10 Applications to Human Diseases 755
- 23.11 The Polymerase Chain Reaction Amplifies Selected DNA Sequences 757
 - Medical Uses of PCR 759

23.12	Site-Directed Mutagenesis of Cloned DNA	760
	Summary	761
	Problems	761
	Selected Readings	763

Solutions	767
