## MOLECULAR MODELLING AND BONDING

*Elaine Moore*

|          |                                                                          |           |
|----------|--------------------------------------------------------------------------|-----------|
| <b>1</b> | <b>INTRODUCTION</b>                                                      | <b>9</b>  |
| <b>2</b> | <b>MOLECULAR MECHANICS</b>                                               | <b>11</b> |
| 2.1      | Ionic solids                                                             | 11        |
| 2.1.1    | Crystal defects in silver chloride                                       | 12        |
| 2.1.2    | Zeolites                                                                 | 14        |
| 2.2      | Modelling organic molecules                                              | 16        |
| 2.3      | Summary of Section 2                                                     | 19        |
| <b>3</b> | <b>QUANTUM CHEMISTRY OF ATOMS</b>                                        | <b>20</b> |
| 3.1      | Atomic orbitals                                                          | 23        |
| 3.1.1    | Orbitals of atoms other than hydrogen                                    | 28        |
| 3.1.2    | Summary of Section 3.1                                                   | 32        |
| 3.2      | Calculating atomic orbitals                                              | 33        |
| 3.3      | Hybrid orbitals                                                          | 34        |
| 3.3.1    | Summary of Section 3.3                                                   | 37        |
| <b>4</b> | <b>MOLECULAR ORBITALS</b>                                                | <b>38</b> |
| 4.1      | Orbitals in diatomic molecules                                           | 38        |
| 4.1.1    | Bonding and antibonding orbitals                                         | 41        |
| 4.1.2    | Summary of Section 4.1.1                                                 | 42        |
| 4.1.3    | Molecular orbitals from s orbitals                                       | 43        |
| 4.1.4    | Molecular orbitals from p orbitals                                       | 47        |
| 4.1.5    | Summary of Sections 4.1.3 and 4.1.4                                      | 53        |
| 4.2      | Homonuclear molecules of the first and second rows of the Periodic Table | 54        |
| 4.2.1    | The molecule $C_2$                                                       | 56        |
| 4.2.2    | Summary of Section 4.2                                                   | 58        |
| 4.3      | Homonuclear diatomic molecules of later rows                             | 58        |
| 4.4      | Heteronuclear diatomic molecules                                         | 60        |
| 4.5      | Summary of Section 4.4                                                   | 66        |

|          |                                                     |            |
|----------|-----------------------------------------------------|------------|
