

EDITOR: DAN B. MARGHITU

MECHANICAL ENGINEER'S HANDBOOK

Table of Contents

Preface	xiii
Contributors	xv
Statics	
<i>Dan B. Marghitu, Cristian I. Diaconescu, and Bogdan O. Ciocirlan</i>	
1. Vector Algebra	2
1.1 Terminology and Notation	2
1.2 Equality	4
1.3 Product of a Vector and a Scalar	4
1.4 Zero Vectors	4
1.5 Unit Vectors	4
1.6 Vector Addition	5
1.7 Resolution of Vectors and Components	6
1.8 Angle between Two Vectors	7
1.9 Scalar (Dot) Product of Vectors	9
1.10 Vector (Cross) Product of Vectors	9
1.11 Scalar Triple Product of Three Vectors	11
1.12 Vector Triple Product of Three Vectors	11
1.13 Derivative of a Vector	12
2. Centroids and Surface Properties	12
2.1 Position Vector	12
2.2 First Moment	13
2.3 Centroid of a Set of Points	13
2.4 Centroid of a Curve, Surface, or Solid	15
2.5 Mass Center of a Set of Particles	16
2.6 Mass Center of a Curve, Surface, or Solid	16
2.7 First Moment of an Area	17
2.8 Theorems of Guldinus–Pappus	21
2.9 Second Moments and the Product of Area	24
2.10 Transfer Theorem or Parallel-Axis Theorems	25
2.11 Polar Moment of Area	27
2.12 Principal Axes	28
3. Moments and Couples	30
3.1 Moment of a Bound Vector about a Point	30
3.2 Moment of a Bound Vector about a Line	31
3.3 Moments of a System of Bound Vectors	32
3.4 Couples	34

3.5	Equivalence	35
3.6	Representing Systems by Equivalent Systems	36
4.	Equilibrium	40
4.1	Equilibrium Equations	40
4.2	Supports	42
4.3	Free-Body Diagrams	44
5.	Dry Friction	46
5.1	Static Coefficient of Friction	47
5.2	Kinetic Coefficient of Friction	47
5.3	Angles of Friction	48
	References	49

Dynamics

Dan B. Marghitu, Bogdan O. Ciocirlan, and Cristian I. Diaconescu

1.	Fundamentals	52
1.1	Space and Time	52
1.2	Numbers	52
1.3	Angular Units	53
2.	Kinematics of a Point	54
2.1	Position, Velocity, and Acceleration of a Point	54
2.2	Angular Motion of a Line	55
2.3	Rotating Unit Vector	56
2.4	Straight Line Motion	57
2.5	Curvilinear Motion	58
2.6	Normal and Tangential Components	59
2.7	Relative Motion	73
3.	Dynamics of a Particle	74
3.1	Newton's Second Law	74
3.2	Newtonian Gravitation	75
3.3	Inertial Reference Frames	75
3.4	Cartesian Coordinates	76
3.5	Normal and Tangential Components	77
3.6	Polar and Cylindrical Coordinates	78
3.7	Principle of Work and Energy	80
3.8	Work and Power	81
3.9	Conservation of Energy	84
3.10	Conservative Forces	85
3.11	Principle of Impulse and Momentum	87
3.12	Conservation of Linear Momentum	89
3.13	Impact	90
3.14	Principle of Angular Impulse and Momentum	94
4.	Planar Kinematics of a Rigid Body	95
4.1	Types of Motion	95
4.2	Rotation about a Fixed Axis	96
4.3	Relative Velocity of Two Points of the Rigid Body	97
4.4	Angular Velocity Vector of a Rigid Body	98
4.5	Instantaneous Center	100
4.6	Relative Acceleration of Two Points of the Rigid Body	102

4.7	Motion of a Point That Moves Relative to a Rigid Body	103
5.	Dynamics of a Rigid Body	111
5.1	Equation of Motion for the Center of Mass.	111
5.2	Angular Momentum Principle for a System of Particles.	113
5.3	Equation of Motion for General Planar Motion	115
5.4	D'Alembert's Principle	117
	References	117

Mechanics of Materials

Dan B. Marghitu, Cristian I. Diaconescu, and Bogdan O. Ciocirlan

1.	Stress	120
1.1	Uniformly Distributed Stresses	120
1.2	Stress Components	120
1.3	Mohr's Circle	121
1.4	Triaxial Stress	125
1.5	Elastic Strain.	127
1.6	Equilibrium	128
1.7	Shear and Moment	131
1.8	Singularity Functions	132
1.9	Normal Stress in Flexure.	135
1.10	Beams with Asymmetrical Sections.	139
1.11	Shear Stresses in Beams	140
1.12	Shear Stresses in Rectangular Section Beams	142
1.13	Torsion	143
1.14	Contact Stresses	147
2.	Deflection and Stiffness.	149
2.1	Springs	150
2.2	Spring Rates for Tension, Compression, and Torsion	150
2.3	Deflection Analysis	152
2.4	Deflections Analysis Using Singularity Functions.	153
2.5	Impact Analysis.	157
2.6	Strain Energy	160
2.7	Castigliano's Theorem	163
2.8	Compression	165
2.9	Long Columns with Central Loading	165
2.10	Intermediate-Length Columns with Central Loading.	169
2.11	Columns with Eccentric Loading	170
2.12	Short Compression Members.	171
3.	Fatigue	173
3.1	Endurance Limit	173
3.2	Fluctuating Stresses	178
3.3	Constant Life Fatigue Diagram.	178
3.4	Fatigue Life for Randomly Varying Loads.	181
3.5	Criteria of Failure	183
	References	187

Theory of Mechanisms

Dan B. Marghitu

1. Fundamentals	190
1.1 Motions	190
1.2 Mobility	190
1.3 Kinematic Pairs	191
1.4 Number of Degrees of Freedom	199
1.5 Planar Mechanisms	200
2. Position Analysis	202
2.1 Cartesian Method	202
2.2 Vector Loop Method	208
3. Velocity and Acceleration Analysis	211
3.1 Driver Link	212
3.2 RRR Dyad	212
3.3 RRT Dyad	214
3.4 RTR Dyad	215
3.5 TRT Dyad	216
4. Kinetostatics	223
4.1 Moment of a Force about a Point	223
4.2 Inertia Force and Inertia Moment	224
4.3 Free-Body Diagrams	227
4.4 Reaction Forces	228
4.5 Contour Method	229
References	241

Machine Components

Dan B. Marghitu, Cristian I. Diaconescu, and Nicolae Craciunoiu

1. Screws	244
1.1 Screw Thread	244
1.2 Power Screws	247
2. Gears	253
2.1 Introduction	253
2.2 Geometry and Nomenclature	253
2.3 Interference and Contact Ratio	258
2.4 Ordinary Gear Trains	261
2.5 Epicyclic Gear Trains	262
2.6 Differential	267
2.7 Gear Force Analysis	270
2.8 Strength of Gear Teeth	275
3. Springs	283
3.1 Introduction	283
3.2 Material for Springs	283
3.3 Helical Extension Springs	284
3.4 Helical Compression Springs	284
3.5 Torsion Springs	290
3.6 Torsion Bar Springs	292
3.7 Multileaf Springs	293
3.8 Belleville Springs	296

4. <i>Rolling Bearings</i>	297
4.1 Generalities	297
4.2 Classification	298
4.3 Geometry	298
4.4 Static Loading	303
4.5 Standard Dimensions	304
4.6 Bearing Selection	308
5. <i>Lubrication and Sliding Bearings</i>	318
5.1 Viscosity	318
5.2 Petroff's Equation	323
5.3 Hydrodynamic Lubrication Theory	326
5.4 Design Charts	328
References	336

Theory of Vibration

Dan B. Marghitu, P. K. Raju, and Dumitru Mazilu

1. <i>Introduction</i>	340
2. <i>Linear Systems with One Degree of Freedom</i>	341
2.1 Equation of Motion	342
2.2 Free Undamped Vibrations	343
2.3 Free Damped Vibrations	345
2.4 Forced Undamped Vibrations	352
2.5 Forced Damped Vibrations	359
2.6 Mechanical Impedance	369
2.7 Vibration Isolation: Transmissibility	370
2.8 Energetic Aspect of Vibration with One DOF	374
2.9 Critical Speed of Rotating Shafts	380
3. <i>Linear Systems with Finite Numbers of Degrees of Freedom</i>	385
3.1 Mechanical Models	386
3.2 Mathematical Models	392
3.3 System Model	404
3.4 Analysis of System Model	405
3.5 Approximative Methods for Natural Frequencies	407
4. <i>Machine-Tool Vibrations</i>	416
4.1 The Machine Tool as a System	416
4.2 Actuator Subsystems	418
4.3 The Elastic Subsystem of a Machine Tool	419
4.4 Elastic System of Machine-Tool Structure	435
4.5 Subsystem of the Friction Process	437
4.6 Subsystem of Cutting Process	440
References	444

Principles of Heat Transfer

Alexandru Morega

1. <i>Heat Transfer Thermodynamics</i>	446
1.1 Physical Mechanisms of Heat Transfer: Conduction, Convection, and Radiation	451

1.2	Technical Problems of Heat Transfer	455
2.	Conduction Heat Transfer	456
2.1	The Heat Diffusion Equation	457
2.2	Thermal Conductivity	459
2.3	Initial, Boundary, and Interface Conditions	461
2.4	Thermal Resistance	463
2.5	Steady Conduction Heat Transfer	464
2.6	Heat Transfer from Extended Surfaces (Fins)	468
2.7	Unsteady Conduction Heat Transfer	472
3.	Convection Heat Transfer.	488
3.1	External Forced Convection	488
3.2	Internal Forced Convection	520
3.3	External Natural Convection.	535
3.4	Internal Natural Convection	549
	References	555

Fluid Dynamics

Nicolae Craciunoiu and Bogdan O. Ciocirlan

1.	Fluids Fundamentals	560
1.1	Definitions	560
1.2	Systems of Units	560
1.3	Specific Weight	560
1.4	Viscosity	561
1.5	Vapor Pressure	562
1.6	Surface Tension	562
1.7	Capillarity	562
1.8	Bulk Modulus of Elasticity	562
1.9	Statics	563
1.10	Hydrostatic Forces on Surfaces	564
1.11	Buoyancy and Flotation	565
1.12	Dimensional Analysis and Hydraulic Similitude	565
1.13	Fundamentals of Fluid Flow	568
2.	Hydraulics.	572
2.1	Absolute and Gage Pressure	572
2.2	Bernoulli's Theorem	573
2.3	Hydraulic Cylinders	575
2.4	Pressure Intensifiers	578
2.5	Pressure Gages	579
2.6	Pressure Controls	580
2.7	Flow-Limiting Controls	592
2.8	Hydraulic Pumps	595
2.9	Hydraulic Motors	598
2.10	Accumulators	601
2.11	Accumulator Sizing	603
2.12	Fluid Power Transmitted	604
2.13	Piston Acceleration and Deceleration	604
2.14	Standard Hydraulic Symbols	605
2.15	Filters	606

2.16 Representative Hydraulic System	607
References	610

Control

Mircea Ivanescu

1. Introduction	612
1.1 A Classic Example	613
2. Signals	614
3. Transfer Functions	616
3.1 Transfer Functions for Standard Elements	616
3.2 Transfer Functions for Classic Systems	617
4. Connection of Elements	618
5. Poles and Zeros	620
6. Steady-State Error	623
6.1 Input Variation Steady-State Error	623
6.2 Disturbance Signal Steady-State Error	624
7. Time-Domain Performance	628
8. Frequency-Domain Performances	631
8.1 The Polar Plot Representation	632
8.2 The Logarithmic Plot Representation	633
8.3 Bandwidth	637
9. Stability of Linear Feedback Systems	639
9.1 The Routh-Hurwitz Criterion	640
9.2 The Nyquist Criterion	641
9.3 Stability by Bode Diagrams	648
10. Design of Closed-Loop Control Systems by Pole-Zero Methods	649
10.1 Standard Controllers	650
10.2 P-Controller Performance	651
10.3 Effects of the Supplementary Zero	656
10.4 Effects of the Supplementary Pole	660
10.5 Effects of Supplementary Poles and Zeros	661
10.6 Design Example: Closed-Loop Control of a Robotic Arm	664
11. Design of Closed-Loop Control Systems by Frequential Methods	669
12. State Variable Models	672
13. Nonlinear Systems	678
13.1 Nonlinear Models: Examples	678
13.2 Phase Plane Analysis	681
13.3 Stability of Nonlinear Systems	685
13.4 Liapunov's First Method	688
13.5 Liapunov's Second Method	689
14. Nonlinear Controllers by Feedback Linearization	691
15. Sliding Control	695
15.1 Fundamentals of Sliding Control	695
15.2 Variable Structure Systems	700
A. Appendix	703
A.1 Differential Equations of Mechanical Systems	703

A.2	The Laplace Transform	707
A.3	Mapping Contours in the s -Plane	707
A.4	The Signal Flow Diagram	712
	References	714

Differential Equations and Systems of Differential Equations

Horatiu Barbulescu

1.	<i>Differential Equations</i>	716
1.1	Ordinary Differential Equations: Introduction	716
1.2	Integrable Types of Equations	726
1.3	On the Existence, Uniqueness, Continuous Dependence on a Parameter, and Differentiability of Solutions of Differential Equations	766
1.4	Linear Differential Equations	774
2.	<i>Systems of Differential Equations</i>	816
2.1	Fundamentals	816
2.2	<i>Integrating a System of Differential Equations by the Method of Elimination</i>	819
2.3	Finding Integrable Combinations	823
2.4	Systems of Linear Differential Equations.	825
2.5	Systems of Linear Differential Equations with Constant Coefficients.	835
	References	845
	Index	847
