Preface	xiii
1. Introduction to Fluid Mechanics	1
Chapter Overview and Goals	1
1. Introduction	1
2. Definition of a Fluid	2
3. The Continuum Hypothesis	5
4. Systems of Units	6
a. British gravitational system of units	6
b. SI system of units	7
5. Stress and Pressure	10
6. Fluid Properties	13
a. Mass and weight densities	13
b. Bulk modulus and coefficient of compressibility	14
c. Vapor pressure	16
d. Surface tension	18
e. No-slip condition	25
f. Absolute viscosity	26
g. Kinematic viscosity	27
7. Non-Newtonian Fluids	28
8. Problem-solving Approach	31
Suggestions for Further Reading	33
Problems for Chapter 1	34
2. Hydrostatics and Rigid-Body Motions	41
Chapter Overview and Goals	41
1. The Hydrostatic Equation	41
2. Manometers	50
3. Rise of Liquids Due to Surface Tension	55
4. Forces on Surfaces	61
a. Plane surfaces	63
b. Forces on circular cylindrical surfaces	67
c. Buoyancy forces	70
d. Stability of submerged and floating bodies	73

5. Rigid-Body Acceleration	78
6. Rigid-Body Rotation	80
Suggestions for Further Reading	83
Problems for Chapter 2	84
3. Fluid Dynamics	109
Chapter Overview and Goals	109
1. Flow Properties and Characteristics	109
2. Acceleration and the Material Derivative	120
3. Control Volume and Control Surface Concepts	123
4. Conservation of Mass—the Continuity Equation	126
5. Newton's Law—the Linear Momentum Equation	130
6. Balance of Energy Equation	133
7. The Entropy Inequality	137
8. Applications	138
a. Applications for flow measurement	138
b. Fans, propellers, windmills, and wind turbines	143
c. Forces on vanes	148
d. Miscellaneous applications	151
9. Unsteady Flows and Translating Control Volumes	156
a. Unsteady flows	157
b. Approximately unsteady flows	159
10. Conservation of Moment-of-Momentum and Rotating Control Volumes	163
a. Moment-of-momentum equations for stationary control volumes	163
b. Moment-of-momentum equations for rotating control volumes	163
11. Path Coordinates—the Euler and Bernoulli Equations	168
a. Application—pitot tubes	170
Suggestions for Further Reading	171
Problems for Chapter 3	171
4. Differential Analysis	193
Chapter Overview and Goals	193
1. The Local Continuity Equation	193
2. The Stream Function	197
a. Two-dimensional flows—Lagrange's stream function	197
b. Three-dimensional flows	201
3. Equations Governing Inviscid Flows	204
4. Vorticity and Circulation	209
5. Irrotational Flows and the Velocity Potential	215
a. Intersection of velocity potential lines and streamlines	218
b. Simple two-dimensional irrotational flows	219
c. Hele-Shaw flows	227
d. Simple three-dimensional irrotational flows	228
e. Superposition and the method of images	229

6. Rates of Deformation	240
7. Stress	243
8. Constitutive Relations	246
9. Equations for Newtonian Fluids	250
10. Boundary Conditions	251
11. Some Solutions to the Navier-Stokes Equations When Convective Acceleration Is Absent	253
a. Stokes' first problem—impulsive motion of a plate	253
b. Stokes' second problem—oscillation of a plate	256
Suggestions for Further Reading	259
Problems for Chapter 4	260
5. Dimensional Analysis	265
Chapter Overview and Goals	265
1. Introduction	265
2. Buckingham's Pi Theorem	266
3. Introductory Example	268
4. Algebraic Approach for the Formulation of Dimensionless Parameters	270
5. Interpretation of Dimensionless Parameters as Force Ratios	274
6. Summary of Steps Involved in Forming Dimensionless Parameters	275
7. Some Common Dimensionless Parameters	276
8. Examples of the Use of Dimensionless Parameters	278
9. Model Studies—Similitude	281
10. Experimental Facilities	284
a. Froude number facilities	284
b. Mach number facilities	285
c. Cavitation number facilities	285
Suggestions for Further Reading	287
Problems for Chapter 5	288
6. Laminar Viscous Flow	295
Chapter Overview and Goals	295
1. Flow between Parallel Plates	296
a. Solid plates at both boundaries	299
b. Solid plate plus a free surface	301
2. Lubrication	303
3. Flow in a Circular Tube or Annulus	308
a. Circular tube	310
b. Circular annulus	313
4. Stability of Tube Flow	317
5. Boundary Layer Theory	319
6. Flow Separation	331
Suggestions for Further Reading	336
Problems for Chapter 6	336

7. Turbulent Viscous Flow	347
Chapter Overview and Goals	347
1. Reynolds Stresses	348
2. Eddy Viscosity and Mixing Length Concepts	350
3. Turbulent Pipe Flow	351
a. Minor losses	363
b. Multiple pipe circuits	366
c. Hydraulic and energy grade lines	369
4. Turbulent Boundary Layer Flows	369
a. Fully established turbulent flow in a smooth pipe.	369
b. Momentum integral formulation	373
c. Turbulent flow past smooth flat plates with zero pressure gradient	375
d. Rough walls	379
5. Drag and Lift Forces	381
a. Vehicle drag	385
b. Lift forces—the Magnus effect	387
c. Airfoils	389
References and Suggestions for Further Reading	392
Problems for Chapter 7	393
8. Open Channel Flows	403
Chapter Overview and Goals	403
1. Introduction	403
2. Forces on Spillways	404
3. Forces on Gates	406
4. Flow Over a Small Bump in a Channel	408
5. Small-Amplitude Standing Gravity Waves	412
6. Hydraulic Jumps	414
7. Unsteady Flows—Moving Waves—Bores	418
8. Channel Cross Section Shape Effects in Open Channel Flow	421
a. Uniform flow	422
9. Channels with Optimum Shape	423
10. Channels with Gradual Slope	428
11. Dams	433
Suggestions for Further Reading	437
Problems for Chapter 8	438
9. Compressible Flows	447
Chapter Overview and Goals	447
1. The Speed of Sound	448
2. Effects of Gas Entrainment on Bulk Modulus and Sonic Speed	452
3. Water Hammer	454
a. Pipe closed-ended	457

b. Pipe constrained from changing length	457
c. Pipe open-ended	458
4. Ideal Gas Thermodynamics	459
5. Isentropic Flow of an Ideal Gas	462
6. Normal Shock Waves	471
7. Flow in a Nozzle	479
8. Oblique and Curved Shock Waves	483
9. Adiabatic Pipe Flow with Friction	487
10. Frictionless Pipe Flow with Heat Transfer	492
Suggestions for Further Reading	495
Problems for Chapter 9	495
10. Measurement of Flow and Fluid Properties	501
Chapter Overview	501
1. Velocity-measuring Devices	501
a. Pitot tubes	501
b. Hot-wire and hot-film anemometers	503
c. Laser Doppler velocimeter	504
2. Volume Rate-measuring Devices	507
a. Venturi meter	507
b. Orifice plate	509
c. Nozzles	509
d. Elbow meter	510
e. Positive displacement meter	511
f. Rotameter	512
g. Turbine meter	513
h. Doppler-acoustic flow meter	514
i. Vortex-shedding flow meter	514
j. Magnetic flow meter	515
k. Weirs	515
l. Integration of velocity measurements	517
3. Mass Rate-measuring Devices	518
a. Hastings mass flow meter	518
b. Coriolis force mass flow meter	519
4. Pressure-measuring Devices	520
a. Bourdon-type gage	520
b. Strain gage and capacitance gage pressure cells	521
c. Piezoelectric crystals and semiconductors	522
5. Viscosity-measuring Devices	522
a. Rotating cylinder viscometer	523
b. Oswald-Cannon-Fenske viscometer	523
c. Saybolt viscometer	524
d. Falling-body viscometer	525
6. Surface-Tension-measuring Device	526

7. Calibration	527
Suggestions for Further Reading	529
Problems for Chapter 10	530
11. Hydraulic Machinery	533
Chapter Overview and Goals	533
1. Pump Classification and Selection	533
a. Positive displacement pumps	533
b. Turbomachine pumps	534
2. Centrifugal Machines	535
3. Centrifugal Pumps	538
4. Positive Displacement Pumps	546
5. Axial Flow Fans and Pumps	547
6. Other Pumps	552
7. Hydraulic Turbines	555
a. Impulse Turbines	556
b. Reaction turbines	559
Suggestions for Further Reading	561
Problems for Chapter 11	563
12. Conclusion	567
References for Further Study	572
Appendix A. Conversion of Units and Useful Constants	577
Classified list of units	577
SI base units	581
Supplementary SI units	581
British derived units	581
SI derived units	582
CGS units and their SI equivalents	582
Abbreviations	583
Prefixes	583
Useful constants	583
Appendix B. Fluid Properties	585
Surface tensions for various fluids	585
Surface tensions of water and alcohol	585
Absolute viscosity vs. temperature (SI units)	586
Kinematic viscosity vs. temperature (SI units)	587
Absolute viscosity vs. temperature (British units)	588
Kinematic viscosity vs. temperature (British units)	589
Contact angles for various fluids	590
Approximate physical properties of water	590

Approximate physical properties of some common liquids	590
SAE motor oil viscosity allowable ranges	591
Approximate physical properties of air	591
Approximate physical properties of some common gases	592
Properties of the U.S. Standard Atmosphere	592
References	593
Appendix C. Mathematical Aids	595
1. Solution of Algebraic Equations—Descartes' Rule of Signs	595
2. Cubic Equations	595
3. Newton's Method for Finding the Roots of an Algebraic Equation	597
4. Numerical Integration of Ordinary Differential Equations	599
5. The Navier-Stokes Equations in Curvilinear Coordinates	601
a. Cylindrical polar coordinates	603
b. Spherical polar coordinates	604
Appendix D. Compressible Flow Table for Air ($k = 1.4$)	607
Appendix E. A Brief History of Fluid Mechanics	613
References on the History of Fluid Mechanics	626
Appendix F. Design of a Pump System	629
1. System Diagrams	629
2. Arrangement Drawings	632
3. System Pressure Loss Calculations	633
Appendix G. Some Suggestions for Design Problems	635
Glossary	641
Answers to Even Numbered Problems	649
Index	657
