

HANDBOOK OF SHOCK WAVES

EDITORS

Gabi Ben-Dor
Ozer Igra
Tov Elperin

VOLUME

1

Theoretical, Experimental, and
Numerical Techniques

CONTENTS

Preface	xvii
Contributors	xxi
Volume Contents	xxvii

1 History of Shock Waves

by P. Krehl

1.1	Introduction	2
1.2	Shock Waves: Definition and Scope	2
1.3	Early Percussion Research	4
1.4	Evolution of Shock Waves	6
1.4.1	Natural Supersonic Phenomena and Early Speculations	6
1.4.2	Shock Waves in Gases	8
1.4.3	Shock Waves in Liquids	12
1.4.4	Shock Waves in Solids	14
1.5	Evolution of Detonation Physics	17
1.6	Milestones in Early High Speed Diagnostics	20
1.7	Further Reading	22
1.8	Chronology of Milestones	25
1.9	Notes	122

2 General Laws for Propagation of Shock Waves through Matter

by L.F. Henderson

2.1	Introduction	144
2.2	The Riemann Problem	145
2.3	Length and Time Scales	145
2.4	The Conservation Laws for a Single Shock	147
2.4.1	Laboratory Frame Coordinates	147
2.4.2	Shock Fixed Coordinates	149
2.5	The Hugoniot Adiabatic	150
2.5.1	The Hugoniot Equation	150
2.5.2	The Rayleigh Equations	150
2.5.3	Solution of a Simple Shock Riemann Problem	151
2.6	Thermodynamic Properties of Materials	152
2.7	Thermodynamic Constraints on the EOS	157
2.8	Non-Thermodynamic Constraints on the EOS	159
2.8.1	Convexity	159
2.8.2	Shock Wave Stability Constraints	160
2.8.3	Other Monotonicity Constraints	163
2.9	The Bethe-Weyl (B-W) Theorem	166
2.10	Shock Wave Interactions	171
2.10.1	Dimensions of the Interactions	171
2.10.2	Two-Dimensional Shock Wave Interactions	171
2.10.3	Three-Dimensional Shock Wave Interactions	172
2.11	The Triple-Shock Theory and Related Theorems	173
2.11.1	The Theorems	173
2.11.2	Application to Shock Wave Interactions	174
2.12	Crocco's Theorem	177
2.13	The Refraction Law	178
2.14	Conclusions	180
	References	181

3 Theory of Shock Waves

3.1 Shock Waves in Gases

by G. Emanuel

3.1.1	Introduction	186
3.1.2	Jump Conditions	187
3.1.2.1	Steady Normal Shock Waves	187
3.1.2.2	Mach Number	188
3.1.2.3	Jump Direction	189

	3.1.2.4	Unsteady Normal Shock Waves	190
	3.1.2.5	Oblique Shock Waves	191
3.1.3		Shock Wave Configurations	193
	3.1.3.1	Local Versus Global Analysis	193
	3.1.3.2	Single Shock System	193
	3.1.3.3	Multiple Shock System	198
3.1.4		Interactions	201
	3.1.4.1	Shock Impingement	202
	3.1.4.2	Shock-Expansion and Expansion-Shock Interactions	202
	3.1.4.3	Boundary-Layer Interaction	204
3.1.5		Real Gas Phenomena	204
	3.1.5.1	Low Temperature Phenomena	205
	3.1.5.2	High Temperature Phenomena	211
3.1.6		Perfect Gas Shock Waves	227
	3.1.6.1	Steady Shock Waves	228
	3.1.6.2	Unsteady Shock Waves	232
	3.1.6.3	Characteristic Theory	239
	3.1.6.4	Shock Formation	242
	3.1.6.5	Steady, Two-Dimensional Axisymmetric Shock waves	245
	3.1.6.6	General Theory	259
		References	259
3.2		Shock Waves in Liquids	
		<i>by S. Itoh</i>	
3.2.1		Fundamental Properties of Liquid	264
	3.2.1.1	Density of Liquid	264
	3.2.1.2	Compressibility of Liquid	264
	3.2.1.3	Viscosity of Liquid	267
3.2.2		Wave Motion in Liquids and Equation of State	268
	3.2.2.1	Pressure Wave in Liquids	268
	3.2.2.2	Equation of State for Liquids	270
	3.2.2.3	Plane Shock Relation for Water	273
3.2.3		Shock Waves in Water Due to Underwater Explosion of High Explosives	274
	3.2.3.1	Observational Investigation	274
	3.2.3.2	Numerical Procedure	275
	3.2.3.3	Experiments of Underwater Shock Waves	277
3.2.4		Von Neumann Reflection of Underwater Shock Wave	290

3.2.4.1	Introduction	290
3.2.4.2	Experimental Method	292
3.2.4.3	Wave Configuration of Oblique Interaction of Underwater Shock Waves	296
3.2.5	Application of Underwater Shock Waves	297
3.2.5.1	Shock Compaction of Powders	297
3.2.5.2	Explosive Forming by Underwater Shock Waves	305
	References	313
3.3	Shock Waves in Solids	
	by K. Nagayama	
3.3.1	Introduction	315
3.3.2	Basics	318
3.3.2.1	Shock Jump Conditions	318
3.3.2.2	Weak Shock Formulas	319
3.3.3	Experimental Method	320
3.3.3.1	Procedure of Shock Wave Generation	320
3.3.3.2	Measurement Methods	322
3.3.4	Shock Hugoniot Curve and High-Pressure Equation of State for Solids	325
3.3.4.1	Empirical Linear Relation	325
3.3.4.2	Reflection and Transmission of Shock Waves at the Material Interface	327
3.3.5	Shock Thermodynamics	329
3.3.5.1	Grüneisen Equation of State for Condensed Media	329
3.3.5.2	Irreversibility of Shock Compression Process	331
3.3.5.3	Temperature Calculation	332
3.3.6	Topics of Applications	334
3.3.6.1	Elastic-Plastic Shock Waves	334
3.3.6.2	Wave Splitting by Elastic-Plastic Transition or High-Pressure Phase	335
	References	337
3.4	Rarefaction Shocks	
	by A. Kluwick	
3.4.1	Introduction	339
3.4.2	Shock Adiabats	344

3.4.3	Shock Admissibility	353
3.4.4	Shock Structure	362
3.4.5	Weak Shocks	375
3.4.6	Shock Dynamics	389
3.4.7	Concluding Remarks	403
	References	405
3.5	Stability of Shock Waves	
	<i>by N.M. Kuznetsov</i>	
3.5.1	Introduction	414
3.5.2	Hydrodynamic Conditions of Shock-Wave Stability	415
3.5.2.1	"One-Dimensional" Conditions of Shock-Wave Instability	415
3.5.2.2	Corrugation Stability of Shock Waves	418
3.5.2.3	Nonuniqueness of Shock Front Representation	420
3.5.2.4	Regions Where a Shock-Wave Discontinuity is Unstable and Where its Representation is Nonunique	422
3.5.2.5	On the Physical Meaning of the Solutions with Steady-State Corrugation Perturbations of a Shock Wave and with Acoustic Waves Emanated by the Shock Front	425
3.5.2.6	Resonance Reflection of a Sound Wave and Shock-Wave Stability	433
3.5.2.7	General Characteristics and a Simple Example of Relation between Instability and Nonuniqueness of Steady-State Regimes	435
3.5.2.8	Stability of Shock Waves Pertaining to the Lower and Upper Branches of the Z-Shaped Segment of the Shock Wave Hugoniot Curve. Splitting of an Unstable Shock Wave	437
3.5.2.9	Simple Interpretation of the Instability Mechanisms and Criteria for Instability	439

3.5.2.10	Feasibility of Experimental Observation of Hydrodynamic Instability of Shock Waves	442
3.5.2.11	Stability of a Shock Wave Supported by a Piston	444
3.5.3	Stability of the Structure of Shock and Detonation Waves	445
3.5.3.1	The Experimental Data on Structural Instability of Shock Waves	445
3.5.3.2	The Structure of Shock Waves and Stability of Viscous Compression Discontinuities	446
3.5.3.3	On the Hydrodynamic Approach to Flows with Structurally Unstable Shock Waves	447
3.5.3.4	On the Mechanisms of Structural Instability of Shock and Detonation Waves	448
3.5.3.5	Two-Fronts Model of a Shock (or Detonation) Wave with Instantaneous Heat Release	448
3.5.3.6	Two-Fronts Model of Shock and Detonation Waves with Non-Instantaneous Relaxation	449
	References	452
3.6	Shock Waves in Space	
	<i>by M. Gedalin</i>	
3.6.1	Introduction	455
3.6.2	Magnetohydrodynamic (MHD) Shocks	456
3.6.3	Shock Morphology	459
3.6.4	Bow Shock Observations	460
3.6.5	Collisionless Shock Theory	468
3.6.5.1	Field Structure	468
3.6.5.2	Nonlinear Waves and Ramp Width	468
3.6.5.3	Noncoplanar Magnetic Field	469
3.6.5.4	Ion Motion	470
3.6.5.5	Electron Heating	473
3.6.6	Shock Particle Acceleration	475
3.6.6.1	Shock Drift Acceleration	475
3.6.6.2	Diffusive Acceleration	476
3.6.6.3	Electron Acceleration	478

3.6.7	Conclusions	479
	References	479

3.7 Geometrical Shock Dynamics

by Z.-Y. Han and X.-Z. Yin

3.7.1	Shock Wave Propagation through Quiescent Gases—Fundamental Concepts and Theoretical Basis	486
3.7.1.1	Chester–Chisnell–Whitham Relation	486
3.7.1.2	Free-Propagation Assumption	487
3.7.1.3	Orthogonal Curvilinear Coordinate System	488
3.7.1.4	Two-Dimensional Shock Diffraction	489
3.7.1.5	Three-Dimensional Shock Wave Diffraction	506
3.7.1.6	Diffraction of Shock Waves Propagating into Nonuniform Quiescent Gases	517
3.7.2	Shock Waves Propagation through Moving Gases	520
3.7.2.1	Shock Waves Propagation through Uniform Flow Fields	520
3.7.2.2	Shock Wave Propagation through Nonuniform Flow Fields	531
	References	550

4 Shock Tubes and Tunnels: Facilities, Instrumentation and Techniques

4.1 Shock Tubes

by M. Nishida

4.1.1	Introduction	553
4.1.2	Shock Jump Relation	554
4.1.3	One-Dimensional Propagation of a Small Disturbance	560
4.1.4	Shock Tube Theory	563
4.1.4.1	General Description of a Shock Tube	563
4.1.4.2	Relations between Regions (1) and (2)	565
4.1.4.3	Relations between Regions (2) and (3)	566
4.1.4.4	Relations between Regions (3) and (4)	567
4.1.4.5	Reflection of a Shock Wave from the Shock Tube End Wall	570

4.1.4.6	Interaction between the Reflected Shock Wave and the Contact Surface	573
4.1.5	Techniques for Shock Tube Operation	581
4.1.5.1	Diaphragm	581
4.1.5.2	Variable Cross-Section Shock Tube	582
4.1.5.3	Shock Tube for Generating Strong Shock Waves	583
	References	584
4.2	Free Piston-Driven Reflected Shock Tunnels	
	<i>by R. Morgan</i>	
4.2.1	Introduction	587
4.2.2	Driver-Heating Mechanism	593
4.2.3	Conclusions	599
	References	600
4.3	Free-Piston Driven Expansion Tubes	
	<i>by R. Morgan</i>	
4.3.1	Introduction	603
4.3.2	Application of a Free-Piston Driver	609
4.3.2.1	Super-Orbital Configurations	611
4.3.2.2	Super-Orbital Applications	611
4.3.2.3	Super-Orbital Expansion Tube Operation	615
4.3.3	Development of Larger Facilities	616
4.3.4	Test Times	619
4.3.5	Conclusions	620
	References	620
4.4	Blast Tubes	
	<i>by R. Robey</i>	
4.4.1	General Description	624
4.4.2	Experimental Design Specification	624
4.4.3	Experimental Design Configurations	626
4.4.3.1	Centered Explosive Design	626
4.4.3.2	Explosive at the End of the Blast Tube	630
4.4.3.3	Explosive Outside the Blast Tube	632
4.4.4	Driver Design	633
4.4.5	Detonable Gas Driver	635
4.4.6	Simulation Scaling	635

4.4.7	Simulation Envelope	636
4.4.8	Instrumentation	637
4.4.9	Applications	639
4.4.9.1	Non-Ideal Blast Wave Simulations	640
4.4.9.2	Model Studies	644
4.4.9.3	Civil Defense Studies	646
4.4.9.4	Detonation Studies	646
4.4.10	Conclusions	648
	References	649
4.5	Supersonic and Hypersonic Wind Tunnels	
	<i>by B. Chanetz and A. Chpoun</i>	
4.5.1	Introduction	652
4.5.2	The Nozzle	654
4.5.3	The Diffuser	656
4.5.4	Start-Up Process	657
4.5.5	Supersonic and Hypersonic Continuous Wind Tunnels	658
4.5.5.1	Return-Circuit Continuous Wind Tunnels	658
4.5.5.2	Open-Circuit Continuous Wind Tunnels	660
4.5.6	Blow-Down Wind Tunnels	664
4.5.6.1	Preliminary Remarks	664
4.5.6.2	Description of a Classical Cold Blow-Down Wind Tunnel	666
4.5.6.3	Induction Blow-Down Wind Tunnel	673
4.5.6.4	Description of a Hot Blow-Down Wind Tunnel	673
4.5.7	Experimental Techniques	676
4.5.7.1	Pitot Probe Technique	676
4.5.7.2	Multihole Pressure Probes	677
4.5.7.3	Electron Beam Fluorescence Technique (EBFT)	677
4.5.7.4	Heat Flux Measurement by Surface Measurement Techniques	678
4.5.7.5	Infrared Thermography Technique	679
4.5.7.6	Laser Doppler Velocimetry (LDV)	680
4.5.8	Summary	681
	References	681

5 Measurement Techniques and Diagnostics

5.1 Flow Visualization

by H. Kleine

5.1.1	Density-Sensitive Flow Visualization	685
5.1.2	The Shadow Technique	693
5.1.3	Schlieren Methods	696
5.1.4	Color Schlieren Techniques	703
5.1.5	Direction-Indicating Color Schlieren Method	708
5.1.6	Interferometry	713
5.1.7	Shearing Interferometry	714
5.1.8	Holographic Interferometry	719
5.1.9	Light Sources and Recording Materials	734
5.1.10	Time Evolution Visualization and Animation	735
	References	738

5.2 Spectroscopic Diagnostics

by D.F. Davidson & R.K. Hanson

5.2.1	Introduction	742
5.2.2	Absorption Theory and Line Shapes	743
5.2.3	Ultraviolet and Visible Laser Absorption Techniques	747
5.2.3.1	Visible and Near-Ultraviolet Transitions Available without Frequency Doubling: CN, SiH, CH, NCO, C ₂ , SiH ₂ , NH ₂ , TiN	752
5.2.3.2	Ultraviolet Transitions Available with Frequency Doubling: OH, NH	754
5.2.3.3	Ultraviolet Transitions Available Using BBO Frequency Doubling: CH ₃ , NO, O ₂ , HO ₂	755
5.2.3.4	Lamp Absorption: Working without Lasers	757
5.2.4	Frequency Modulation Methods	757
5.2.4.1	Theory and Experiment	759
5.2.4.2	NH ₂ and ¹ CH ₂	760
5.2.5	Infrared Laser Absorption and Emission Techniques	761
5.2.5.1	Room Temperature Diodes	761
5.2.5.2	Pb Salt Diode Lasers	763
5.2.5.3	CO Discharge Lasers	764

5.2.5.4	Emission Methods	765
5.2.6	Atomic Resonance Absorption Spectroscopy	766
5.2.6.1	Experimental Methods	767
5.2.6.2	Calibrations and Applications	769
5.2.6.3	Shock Tube Impurities	770
5.2.7	Planar Laser Induced Fluorescence	771
5.2.7.1	Theory	771
5.2.7.2	Measurement Strategies	772
	References	776

6 Numerical Methods

by P. Roe

6.1	Introduction	788
6.2	Analytical Background	789
6.2.1	Conservation	789
6.2.2	Weak Solutions	791
6.2.3	Physical Solutions: Entropy Conditions	792
6.2.4	Quasilinear Form, Jacobians	794
6.2.5	Wavespeeds, Hyperbolicity, Nonlinearity and Convexity	796
6.2.6	Characteristic Variables, Centered Waves	799
6.2.7	Riemann Problems	800
6.3	Numerical Background	802
6.3.1	Finite-Volume Methods: The Lax-Wendroff Theorem	802
6.3.2	Error and Accuracy	804
6.3.3	The Simplest Hyperbolic Problem	806
6.3.4	Time-Stepping, Flux Integration, Semi-Discretization	813
6.4	One-Dimensional Methods	815
6.4.1	The Godunov Scheme	816
6.4.2	A Linearized Riemann Solver	818
6.4.3	The Entropy Fix	822
6.4.4	Positivity	824
6.4.5	High-Resolution Schemes	828
6.4.6	Essentially Non-Oscillatory (ENO) Schemes	840
6.4.7	Avoiding the Riemann Problem	843
6.5	Source Terms	853
6.6	Multidimensional Application	855
6.6.1	Flux Calculation	855

6.7	Grid Generation and Adaptivity	857
6.8	Anomalous Solutions	859
6.9	<i>"Genuinely" Multidimensional Methods</i>	860
6.10	Further Reading	861
6.11	An Example	862
6.12	Concluding Remarks	864
	References	869
	Index	877
