
Cell–Cell Interactions

Second Edition

Edited by

Tom P. Fleming

PRACTICAL APPROACH

Contents

Preface *page v*
Protocol list *xiii*

1 Cadherin adhesion regulation in keratinocytes *1*
Vania Braga

1 Introduction *1*
2 Keratinocytes and cadherins *1*
Background *1*
Model *3*
Advantages of the model *4*
Disadvantages of the model *4*
Keratinocyte cultures *5*
3 Microinjection *7*
Tools to modulate the activity of the small GTPases *7*
Methodology *8*
Strategy *8*
Preparation of material to inject *10*
Microinjection procedure to study keratinocyte junctions *11*
Analysis of microinjection experiments *13*
4 Immunostaining and confocal analysis *14*
Detergent extraction *14*
Immunolabelling *16*
Confocal microscocopy *19*
5 Cadherin functional assays *20*
Inhibition by antibodies against E- and P-cadherin *20*
Clustering cadherin receptors *21*
6 Biochemical analysis of cadherin complexes *24*
Cadherin and catenins *24*
Protein extracts *26*
Immunoprecipitation and Western blotting *27*
7 Phosphorylation of cadherin complexes *30*
Orthophosphate labelling *30*
Isolation of phosphorylated proteins *31*
Phosphopeptide mapping *33*
Determination of the type of phosphorylated amino acid *34*

2 Analysis of intercellular adhesion molecules in endothelial cells *37*
Gianfranco Bazzoni, Maria G. Lampugnani, Ofelia M. Martinez-Estrada, and Elisabetta Dejana

1 Introduction *37*
2 Endothelial cell culture *38*
Human umbilical vein endothelial cells (HUVECs) *38*
3 Vascular permeability and morphological changes associated with increased permeability *40*
Vascular permeability *42*
Immunofluorescence microscopy analysis of ECs *43*
Acknowledgements *44*

3 Gap junction-mediated interactions between cells *47*
David Becker and Colin Green

1 Introduction *47*
2 Establishing the pattern and extent of communication between cells *47*
Dye transfer *48*
3 Gap junction density and connexin isoform expression *54*
Immunohistochemistry: connexin-specific antibodies *54*
Quantification of connexin plaque size and number *58*
Expression analysis of mRNA by quantitative RT-PCR *59*
Whole-mount *in situ* hybridization for connexins using digoxigenin *61*
4 Manipulating gap junctional communication *63*
Pharmacological agents *64*
Antibody blockers *64*
Extracellular loop peptides *65*
Manipulation of gap junction gene expression *66*

4 Functional analysis of the tight junction *71*
Marcellino Cereijido, Liora Shoshani, and Ruben G. Contreras

1 Introduction *71*
2 Model systems *72*
Monolayers of epithelial cells *72*
Co-cultures *74*
3 Electron microscopy *77*
Electron-dense tracers *78*
Freeze-fracture *80*
4 Information derived from the physical properties of permeating molecules *82*
Solute size and charge assay for paracellular transport *82*
5 The tight junction also functions as a fence *85*
6 Analysis of second messenger regulation of tight junction sealing and activity *87*
Ca^{2+} signalling *87*
Changes in phosphorylation of TJ-associated molecules *87*
Acknowledgements *89*

5 Leukocyte cell adhesion interactions *93*

Carl G. Gahmberg, Leena Valmu, Tiina J. Hilden, Evelina Ihanus, Li Tian, Henrietta Nyman, Ulla Lehto, Asko Uppala, Tanja-Maria Ranta, and Erkki Koivunen

1 Introduction *93*
- General *93*
- The leukocyte β_2-integrins *94*
- The ICAMs *94*
- The selectins *96*
- Other leukocyte adhesion molecules *96*

2 Activation of leukocyte adhesion *97*
- Methods to activate integrins *97*

3 Identification and preliminary characterization of leukocyte adhesion molecules *98*

4 Phosphorylation of adhesion molecules *101*

5 Isolation of active β_2-integrins *104*

6 Preparation of I-domains *105*

7 Construction and purification of Fc chimeric proteins *108*

8 Cell adhesion assay *111*

9 Detection of ICAMs *112*

10 Use of phage display libraries for isolation of peptide ligands to β_2-integrins *113*

Acknowledgements *117*

6 Studying cell interactions during development of the nervous system in *Drosophila* *119*

David Shepherd, Louise Block, James Folwell, and Darren Williams

1 Introduction *119*
- Why study *Drosophila*? *119*
- For the absolute beginner *120*

2 Preparing tissues for study *120*
- Equipment required *121*
- Handling tissues *121*
- Dissections *121*

3 Revealing neurons and glia *123*
- Reporter genes *123*
- Dye injections *126*
- Using antibodies to reveal specific neurons *130*
- Lineage tracing and birthdating of cells *135*

4 Manipulation of cells *137*
- Methods of ectopic gene activation *137*
- The GAL4 enhancer-trap technique *139*
- Laser gene activation in single cells *140*
- Mosaic analysis *143*
- Methods of targeted cellular ablation *148*

Acknowledgements *149*

7 Tight junction protein expression in early *Xenopus* development and protein interaction studies *153*
Sandra Citi, Fabio D'Atri, Michelangelo Cordenonsi, and Pietro Cardellini

1 Introduction *153*
2 Tight junction formation during *Xenopus laevis* early development *153*
Preparation of *Xenopus laevis* eggs and embryos *154*
Whole-mount immunolocalization of tight junction proteins in *Xenopus laevis* eggs and early embryos *156*
Scanning electron microscopic analysis of junctions in *Xenopus* embryos *159*
Biochemical analysis of *Xenopus* eggs and embryos *160*
Microinjection of *Xenopus* oocytes, eggs, and embryos *162*
3 Assays to study protein–protein interactions *in vitro* *164*
Bacterial and insect cell expression of recombinant proteins *165*
Preparation of vertebrate cell lysates containing tight junction proteins *168*
GST pull-down *169*
Determination of the dissociation constant for protein–protein interaction (K_d) *171*
Immunoprecipitation *173*
Websites for specialized suppliers *175*
Acknowledgements *175*

8 Oocyte–granulosa cell interactions *177*
Barbara C. Vanderhyden

1 Introduction *177*
2 Mammalian oocyte growth and development *in vivo* *177*
3 Isolation and culture of pre-antral follicles and oocyte–granulosa cell complexes *179*
Overview *179*
Isolation and culture of rodent pre-antral follicles *180*
Growth of pre-antral follicles from commercially important species *182*
Growth of primate pre-antral follicles *183*
Parameters indicative of successful follicle development *183*
4 *In vitro* maturation techniques *183*
Meiotic (nuclear) and cytoplasmic maturation of oocytes *183*
Factors to consider when designing oocyte maturation experiments *184*
In vitro maturation of rodent oocytes *185*
In vitro maturation of oocytes from domestic species *186*
In vitro maturation of primate oocytes *187*
Evaluation of *in vitro* maturation *187*
5 Evaluating granulosa cell effects on oocyte development *188*
6 Evaluating oocyte effects on granulosa cell development *188*
Isolation and culture of cumulus granulosa cells *189*
Isolation and culture of mural granulosa cells *192*
Granulosa cell differentiation in culture *192*
7 Analysis of oocyte–granulosa cell gap junctional communication *193*
8 Antisense and other strategies for interfering with oocyte–granulosa cell interactions *194*
Manipulation of gene expression in oocytes *194*
Manipulation of gene expression in granulosa cells *198*

9 *In vivo* experimental systems for studying oocyte–granulosa interactions *198*
Acknowledgements *198*

9 Cell–cell interactions in early mammalian development *203*
Tom P. Fleming, Judith J. Eckert, Wing Yee Kwong, Fay C. Thomas, Daniel J. Miller, Irina Fesenko, Andrew Mears, and Bhav Sheth

1 Introduction *203*
Cell–cell interactions in blastocyst morphogenesis *203*
2 Generation of synchronous embryos and cell clusters *206*
3 Analyses of gene and protein expression *210*
Gene expression analysis *210*
Protein localization at cell contact sites in pre-implantation embryos *214*
4 Analysis of cell lineage segregation *218*
Acknowledgements *227*

10 Model systems for the investigation of implantation *229*
John D. Aplin, Carlos Simón, Susan J. Kimber, Melanie J. Blissett, Helen Lacey, Chie-Pein Chen, and Carolyn J. P. Jones

1 Embryo–endometrial interactions *229*
Co-culture of human embryos with human endometrial epithelial cells as a model for implantation studies *229*
Murine uterine epithelial cell cultures *235*
2 Human placental development *243*
Introduction: placental cell lineages *243*
Cell culture methods *243*
Extravillous trophoblast *244*
Isolation and culture of placental fibroblasts *253*

A1 *List of suppliers* *259*

Index *265*
