

Essential Developmental Biology

Jonathan Slack

Contents

Preface, v

Section 1: Groundwork, 1

1 The Excitement of Developmental Biology, 3

Where the subject came from, 3

Central position in biology, 3

Impact on society, 4

Future impact, 4

2 General Problems of Development, 6

Nuclear totipotency, cloning of animals, 7

3 Key Molecular Components, 10

Genes, 10

Signalling systems, 13

Cytoskeleton, 16

Cell adhesion molecules, 18

Appendix, 19

Transcription factor families, 19

Inducing factor families, 20

Cell adhesion molecules, 24

Extracellular matrix components, 25

4 Common Features of Development, 27

Gametogenesis, 27

Fertilization, 30

Early development, 30

Morphogenetic processes, 35

Evolution of developmental mechanisms, 41

5 Developmental Genetics, 48

Developmental mutants, 48

Screening for mutants, 53

Cloning of genes, 55

Transgenesis, 55

Limitations of developmental genetics, 57

6 Experimental Embryology, 60

Normal development, 60

Developmental commitment, 63

Acquisition of commitment, 66

Homeotic genes, 68

7 Techniques for the Study of Development, 73

Microscopy, 73

Study of gene expression by biochemical methods, 76

In situ methods, 79

Microinjection, 81

Cell-labelling methods, 83

Reporter genes, 84

Section 2: Major Model Organisms, 87

8 Model Organisms, 89

Availability and cost, 89

Access and micromanipulation, 90

Genetics and genome maps, 90

Relevance, 91

9 *Xenopus*, 93

Oogenesis, maturation, fertilization, 93

Embryonic development, 94

Experimental methods, 100

Regional specification, 103

Inductive interactions, 108

10 The Zebrafish, 116

Normal development, 116

Mutagenesis, 117

Regional specification, 120

- 11 The Chick, 122
 - Normal development, 123
 - Regional specification of the early embryo, 129
 - Description of organogenesis in the chick, 131
- 12 The Mouse, 140
 - Normal development, 140
 - Technology of mouse development, 149
 - Regional specification in development, 158
 - Other topics in mouse development, 162
- 13 *Drosophila*, 165
 - Insects, 165
 - Normal development, 166
 - Drosophila* developmental genetics, 169
 - Overview of the developmental program, 173
 - The dorsoventral pattern, 174
 - The anteroposterior system, 178
- 14 *Caenorhabditis elegans*, 191
 - Normal development, 191
 - Regional specification in the embryo, 193
 - Analysis of postembryonic development, 198
 - Programmed cell death, 200

Section 3: Organogenesis and Regeneration, 205

- 15 Tissues, 207
 - Epithelial tissues, 207
 - Connective tissues, 207
 - Muscle, 209
 - Neural tissues, 209
 - Blood and blood vessels, 209
- 16 Development of the Nervous System, 212
 - Overall structure and cell types, 212

- Anteroposterior patterning of the neural plate, 216
 - Dorsoventral patterning of the neural tube, 219
 - Neurogenesis and gliogenesis, 220
 - The neural crest, 224
 - Development of neuronal connectivity, 227
- 17 Development of Mesodermal Organs, 236
 - Somitogenesis, 236
 - The kidney, 242
 - Gonadal development, 245
 - Limb development, 250
- 18 *Drosophila* Imaginal Discs, 262
 - Metamorphosis, 262
 - Genetic study of larval development, 262
 - Mitotic recombination, 264
 - Disc development, 268
 - Regional patterning of the wing disc, 272
 - Regional patterning of the leg disc, 275
- 19 Stem Cells and Tissue Growth, 278
 - Size and proportion, 278
 - Renewal tissues, 279
 - Growth in stature, 288
 - Postnatal disorders of growth and differentiation, 291
 - Cancer, 291
- 20 Regeneration of Missing Parts, 296
 - Distribution of regenerative capacity, 296
 - Planarian regeneration, 297
 - Vertebrate limb regeneration, 300

Index, 313
