<i>List of Contributors</i>	xii
<i>Preface</i>	xiii
1 Introduction	1
1.1 The origins of sandwich technology	1
1.2 Principles of sandwich construction	2
1.3 Requirements for sandwich cladding panels	4
1.4 Wall panels	5
1.5 Panels for cold stores	6
1.6 Roof panels	7
1.7 Methods of manufacture	8
1.7.1 Manufacture of facings	8
1.7.2 Panels with bonded cores	8
1.7.3 Foamed cores	9
1.8 Design requirements for structural sandwich panels	10
1.9 Structural design of sandwich panels	11
1.10 Layout of this book	12
2 Materials	14
2.1 Introduction	14
2.2 Facing materials	14
2.2.1 Steel facings	15
2.2.2 Aluminium sheeting	20
2.2.3 Other metal face materials	22
2.2.4 Other facing materials	24
2.3 Core materials	26
2.3.1 Rigid plastic foam materials	28
2.3.2 Characteristic properties of rigid foams	33
2.3.3 Inorganic core material	36
2.3.4 Characteristic properties of mineral wools	38
2.4 Honeycomb cores	39
2.5 Adhesives and other components	40
2.5.1 Mechanical properties	41
2.6 Fasteners and other components	41
2.7 References	41
3 Thermal Performance and Water-Tightness	43
3.1 Introduction	43
3.2 Insulation theory	43
3.2.1 Factors influencing the thermal conductivity of a material	44
3.3 Thermal resistance	46

3.3.1	Total thermal resistance of a building element	47
3.4	Thermal transmittance coefficient (U-value)	47
3.4.1	Calculation method for profiled panels	48
3.5	Thermal capacity	49
3.6	Thermal bridges	50
3.7	Air-tightness	51
3.7.1	Test methods for air-tightness	53
3.8	Water-tightness	53
3.8.1	Test methods for water-tightness	54
3.9	Moisture	55
3.9.1	Surface condensation	57
3.9.2	Moisture transfer	57
3.10	Thermographic surveys	58
3.11	The advantage of sandwich construction in the context of thermal insulation	59
3.12	Energy saving	59
3.13	Reference	61
4	Acoustics	62
4.1	Introduction	62
4.2	What is sound?	62
4.2.1	Decibel arithmetic	64
4.3	Fundamental acoustic parameters	65
4.4	Sound insulation	66
4.4.1	Example 1	67
4.5	Weighted sound reduction index	67
4.6	Overall sound reduction index	68
4.6.1	Example 2	69
4.7	Flanking transmission	69
4.8	Sound reduction index for holes and slits	70
4.9	Sound reduction index for a sandwich panel	71
4.10	Sound in rooms	73
4.10.1	Sound absorption	73
4.10.2	Sound absorption for sandwich panels	74
4.11	Noise reduction in small industrial premises	75
4.11.1	Example 3	76
4.12	Noise reduction in large industrial premises	76
4.12.1	Reverberation time	76
4.12.2	Room classification	77
4.12.3	Sound propagation	78
4.12.4	General sound level reduction	78
4.12.5	Example 4	79
4.13	References	80
5	Fire	81
5.1	General aspects of fire behaviour	81
5.1.1	Introduction	81
5.1.2	Objectives of fire safety design	82

5.1.3	Phases of a fire	83
5.1.4	Assessment of the threat to life	86
5.1.5	Fire severity	88
5.1.6	Introduction to reaction to fire	92
5.1.7	Introduction to fire resistance	94
5.1.8	Fire safety legislation	97
5.1.9	Large-scale fire tests and experience of actual fires	98
5.2	Fire tests	99
5.2.1	Use of standard fire tests	99
5.2.2	Reaction-to-fire tests	99
5.2.3	Fire resistance tests	102
5.3	Material properties at elevated temperature	103
5.3.1	Face materials	103
5.3.2	Core materials	107
5.3.3	Adhesives	111
5.3.4	Mechanical fasteners	111
5.4	Design considerations	112
5.4.1	General	112
5.4.2	Design for fire safety	112
5.4.3	Fire regulations	113
5.4.4	Insurance requirements	114
5.4.5	Structural support for panel assemblies	114
5.4.6	Loading and restraint of the panel assembly	115
5.4.7	Spread of fire within the core	118
5.4.8	Fire stopping	118
5.4.9	Joints in the panel assembly	119
5.4.10	Sealants	120
5.4.11	Fire protection	121
5.4.12	Retention of panel facings	122
5.4.13	Fire load of panels	128
5.4.14	Choice of panel facings	129
5.4.15	Choice of core material	129
5.4.16	Choice of adhesives	130
5.4.17	Required behaviour for horizontal panels (both ceiling and roof panels)	130
5.4.18	Required behaviour for vertical panels (internal and external walls)	131
5.5	Engineering solutions	131
5.5.1	External walls	132
5.5.2	Internal walls	137
5.5.3	Roofs	138
5.5.4	Ceilings	139
5.6	Reparability after fire	141
5.7	Check list for designers	141
5.8	References	144
5.8.1	Additional references for wider reading	146

6	Durability	148
6.1	General aspects of durability	148
6.2	Prediction of the lifetime of a structure	150
6.3	Actions on sandwich panels which may cause degradation	151
6.3.1	Actions causing mechanical degradation	152
6.3.2	Actions causing physical degradation	152
6.4	Accelerated test methods	153
6.4.1	Durability of the panel	153
6.4.2	Effect of temperature variations and moisture on strength properties	157
6.4.3	Tests for durability	158
6.4.4	Durability of the adhesive	161
6.4.5	Durability of facing materials	164
6.5	Guidelines for the choice of materials and fasteners	166
6.5.1	Core material	166
6.5.2	Adhesives	166
6.5.3	Face material	166
6.5.4	Fasteners	167
6.6	References	167
7	Refrigerated Warehouses, Cold Stores and Chill Rooms	168
7.1	Introduction	168
7.1.1	Cold stores and chill rooms inside the building	170
7.2	Thermal insulation	171
7.3	Air-tightness	171
7.4	Moisture barriers	172
7.5	Fire	173
7.6	Details	173
7.7	Special considerations applying to sandwich panel outer walls	175
7.7.1	Allowing for reactions to mechanical and thermal loads	175
7.7.2	Thermal expansion/contraction and panel deformation	177
7.8	The engineering design of sandwich panels	177
7.8.1	Using panel supports having lateral degrees of freedom	178
7.8.2	Pre-flexed panel outer faces	180
7.9	Structural features requiring special attention	182
8	Special Architectural Applications	184
8.1	Introduction	184
8.2	Cladding details	184
8.3	Industrial and commercial buildings	184
8.3.1	Esso UK plc corporate headquarters, Leatherhead, UK	185
8.3.2	Manufacturing facility for Compaq Computer Corporation, Erskine, Scotland	185
8.4	High-technology architectural wall panels	185
8.4.1	Case study: Aspect Mark II	187
8.5	References	191

9 Principles of Structural Behaviour	193
9.1 Introduction	193
9.1.1 Types of panels	194
9.2 Analysis of panels with flat or lightly profiled faces	195
9.2.1 Case 1: Simply supported panel with a uniformly distributed load	197
9.2.2 Case 2: Simply supported panel with a point load	199
9.2.3 Case 3: Simply supported panel with a temperature difference	200
9.2.4 Solutions for two- and three-span panels	201
9.2.5 More general cases of loading and support conditions	202
9.3 Analysis of panels with profiled faces	204
9.3.1 Simply supported panel with a uniformly distributed load of q per unit length	206
9.3.2 Simply supported panel with a point load anywhere in the span	208
9.3.3 Simply supported panel with a temperature difference between the faces	209
9.3.4 Solutions for two- and three-span panels	210
9.4 Approximate solutions for some simple cases	210
9.5 Finite-element and other numerical methods	217
9.5.1 Force-deformation relationships	219
9.6 Axially loaded sandwich panels	223
9.7 Sandwich panels spanning in two directions (sandwich plates)	223
9.7.1 Simply supported panel with flat or quasi-flat faces	224
9.8 References	225
10 Load-bearing Capacity	227
10.1 Principles of the evaluation of resistance	227
10.2 Failure modes	229
10.2.1 Tensile and compressive failure of the faces	230
10.2.2 Failure of the core and face at the support with positive support reaction	237
10.2.3 Failure of the core and face at a support subject to negative support reaction	248
10.2.4 Shear failure of the core	252
10.2.5 Shear failure of a profiled face	254
10.2.6 Connections	254
10.2.7 Deflections	256
10.3 Derivation of the theoretical expressions for buckling stress	258
10.4 Derivation of expressions for the interaction at intermediate supports	262
10.5 Conclusions	266
10.6 References	267
11 Loads, Load and Material Factors and Design Procedure	269
11.1 Design equation	269
11.2 Loads on sandwich panels	271

11.3	Choice of the method of analysis	273
11.4	Safety factors	274
11.5	Load combinations	276
11.6	Permissible short-term and long-term deflections	280
11.7	Conclusions	281
11.8	References	282
12	Additional Structural Considerations	284
12.1	Introduction	284
12.2	Details of sandwich structures	284
12.2.1	Details for external walls	285
12.2.2	Details for external roofs	285
12.2.3	Details for internal walls	286
12.2.4	Details for ceilings	288
12.3	Connections between a sandwich panel and the supporting structure	288
12.4	Effect of openings	293
12.5	Flexibility of fasteners and supports	298
12.6	Lateral and rotational stiffness of fastenings	304
12.7	Capacity under axial load	307
12.8	Diaphragm action	311
12.9	Conclusions	313
12.10	References	313
13	Mechanical Testing	315
13.1	Introduction	315
13.2	Tests on core materials	316
13.3	Tests to determine the wrinkling stress	323
13.4	Tests to determine the interactions between bending moment and support force	324
13.5	Creep and long-term strength tests	325
13.6	Tests on fasteners	325
13.7	Tests used in quality control	325
13.8	Statistical interpretation of test data	327
13.9	Detailed test procedures	327
13.9.1	General	327
13.9.2	Test environment and conditioning of test specimens	328
13.9.3	Test procedures for material properties	328
13.9.4	Tests on complete panels	334
13.9.5	Tests on fasteners and connections	342
13.10	References	345
14	Examples of Calculation Procedures	346
14.1	General	346
14.2	Two-span wall panel	346
14.2.1	Actions (loads)	347
14.2.2	Cross-section of the panel	347
14.2.3	Design values for the panel	348

14.2.4	Load, material and combination factors	348
14.2.5	Ultimate limit state	348
14.2.6	Serviceability limit state	350
14.2.7	Comments on the calculations	356
14.3	Two-span roof panel	357
14.3.1	Actions (loads)	357
14.3.2	Cross-section of the panel	358
14.3.3	Design values for the panel	358
14.3.4	Load, material and combination factors	359
14.3.5	Calculation of the initial design parameters	359
14.3.6	Ultimate limit state	359
14.3.7	Serviceability limit state	363
14.3.8	Design of fasteners	367
14.3.9	Comments on the calculations	367
14.4	Reference	367
