

Woodhead Publishing in Food Science and Technology

# *Antioxidants in food*

Practical applications

Edited by

Jan Pokorny, Nedyalka Yanishlieva and Michael Gordon

WOODHEAD PUBLISHING LIMITED

# Contents

List of contributors	xi
1 Introduction	1
<i>Professor Jan Pokorný, Prague Institute of Chemical Technology</i>	
<b>Part 1 Antioxidants and food stability</b>	
2 The development of oxidative rancidity in foods	7
<i>Dr Michael H. Gordon, The University of Reading</i>	
2.1 Introduction	7
2.2 Types and effects of rancidity	9
2.3 Mechanism of autoxidation	10
2.4 Photo-oxidation	15
2.5 Ketonic rancidity	16
2.6 Metal-catalysed lipid oxidation	16
2.7 Antioxidant effects	17
2.8 Other relevant reactions	17
2.9 Mechanism of lipoxygenase-catalysed oxidation	18
2.10 Future trends	20
2.11 Sources of further information and advice	20
2.12 References	20
3 Inhibiting oxidation	22
<i>Professor N. V. Yanishlieva-Maslarova, Bulgarian Academy of Sciences, Sofia</i>	
3.1 Critical points of oxidation	22

3.2	Inhibiting oxidation	29
3.3	Types of inhibitors	32
3.4	Types of antioxidants	42
3.5	Key influences on antioxidant activity	51
3.6	Future trends	55
3.7	Sources of further information and advice	56
3.8	References	57
4	Measuring antioxidant activity	71
	<i>Dr Michael H. Gordon, The University of Reading</i>	
4.1	Introduction	71
4.2	Radical-scavenging methods	72
4.3	Methods for measuring the current state of an oil or food sample	73
4.4	Methods to monitor changes in oxidation	80
4.5	Predictive methods	81
4.6	Applications to particular foods	82
4.7	Future trends	83
4.8	Sources of further information and advice	83
4.9	References	84

## Part 2. Antioxidants and health

5	Cardiovascular disease and nutritional phenolics	87
	<i>Dr F. Virgili and Dr C. Scaccini, National Institute for Food and Nutrition Research, Rome, and Professor L. Packer and Dr G. Rimbach, University of California, Berkeley</i>	
5.1	Introduction	87
5.2	LDL oxidation and atherogenesis	88
5.3	Polyphenols and cell response	89
5.4	Polyphenols and activated NF- $\kappa$ B	90
5.5	Other aspects of polyphenols as modulators of signal transduction	91
5.6	Indirect evidence for polyphenol activity in atherogenesis	94
5.7	Conclusions and future trends	95
5.8	List of abbreviations	96
5.9	References	96
6	Antioxidants and antitumour properties	100
	<i>Professor I. T. Johnson, Institute of Food Research, Norwich</i>	
6.1	Introduction	100
6.2	The nature of tumour growth	102
6.3	Models of carcinogenesis	105

6.4	Diet and gene interactions	105
6.5	Mechanisms of action: nutrients	107
6.6	Mechanisms of action: phytochemicals	113
6.7	Conclusion: the role of functional foods	117
6.8	Future trends	118
6.9	Sources of further information and advice	118
6.10	References	119
7	Predicting the bioavailability of antioxidants in food: the case of carotenoids	124
	<i>Professor Susan Southon and Dr Richard Faulks, Institute of Food Research, Norwich</i>	
7.1	Introduction	124
7.2	Metabolism	126
7.3	Systems for predicting carotenoid absorption	130
7.4	Maximising the bioavailability of carotenoids	136
7.5	Future trends	139
7.6	Sources of further information and advice	139
7.7	References	140
 <b>Part 3 Natural antioxidants</b>		
8	Introducing natural antioxidants	147
	<i>Dr Honglian Shi, Cornell University Medical College, and Dr Noriko Noguchi and Professor Etsuo Niki, The University of Tokyo</i>	
8.1	Introduction	147
8.2	Categorising natural antioxidants	148
8.3	Potency of natural antioxidants	149
8.4	Future trends	155
8.5	Sources of further information	155
8.6	References	155
9	Sources of natural antioxidants: oilseeds, nuts, cereals, legumes, animal products and microbial sources	159
	<i>Professor Clifford Hall III, North Dakota State University</i>	
9.1	Introduction	159
9.2	Characteristics of natural antioxidants	160
9.3	Antioxidants from legumes, nuts and oilseeds	167
9.4	Antioxidants from cereals	180
9.5	Antioxidants from animal products	189
9.6	Antioxidants from microbial sources	190
9.7	Antioxidants as preserving agents	195

9.8	Concluding remarks – future trends and sources of further information	197
9.9	References	198
10	Sources of natural antioxidants: vegetables, fruits, herbs, spices and teas	210
	<i>Professor N. V. Yanishlieva-Maslarova, Bulgarian Academy of Sciences, Sofia, and Professor I. M. Heinonen, University of Helsinki</i>	
10.1	Introduction	210
10.2	Antioxidants from vegetables	210
10.3	Antioxidants from fruits and berries	215
10.4	Antioxidants from herbs, spices and teas	224
10.5	Future trends	247
10.6	Sources of further information and advice	248
10.7	References	249
 <b>Part 4 Practical applications</b>		
11	The regulation of antioxidants in food	267
	<i>Professor Kamila Miková, Prague Institute of Chemical Technology</i>	
11.1	Introduction	267
11.2	Toxicological aspects	268
11.3	The <i>Codex Alimentarius</i>	270
11.4	The regulation of antioxidants in the European Union (EU)	271
11.5	The regulation of antioxidants in the United States	276
11.6	The regulation of antioxidants in Australia	277
11.7	The regulation of antioxidants in Japan	280
11.8	Future trends	282
11.9	Sources of further information and advice	283
11.10	References	283
12	The use of natural antioxidants in food products of animal origin	285
	<i>Professor Susan L. Cuppett, University of Nebraska-Lincoln</i>	
12.1	Introduction	285
12.2	Control of lipid oxidation in meat products	286
12.3	Dairy products	297
12.4	Eggs and egg products	302
12.5	Cholesterol	303

12.6	Summary and future trends	304
12.7	Sources of further information	305
12.8	References	305
13	Preparation of natural antioxidants <i>Professor Jan Pokorný, Prague Institute of Chemical Technology, and Professor Józef Korczak, University of Agriculture, Poznań</i>	311
13.1	Introduction	311
13.2	Direct application of active food ingredients	312
13.3	Preparation of antioxidants by extraction of food ingredients	313
13.4	Commercial production of tocopherols from natural sources	321
13.5	Preparation and application of amino acids as antioxidants	322
13.6	Preparation and application of phospholipids as antioxidants	323
13.7	Organic polyvalent carboxylic acids as food antioxidants	324
13.8	Chelating agents as substances improving the stability of lipids against oxidation	325
13.9	Future trends	326
13.10	References	327
14	Natural antioxidant functionality during food processing <i>Professor Jan Pokorný, Prague Institute of Chemical Technology, and Professor Štefan Schmidt, Slovak Technical University, Bratislava</i>	331
14.1	Introduction	331
14.2	Types of changes in antioxidants during food processing and storage	331
14.3	Changes under heating when water is the heat transfer medium	333
14.4	Changes in functionality of antioxidants during processes when hot air is the medium of heat transfer	337
14.5	Processes where the energy is transferred as waves	340
14.6	Changes during processes where oil is the heat transfer medium	341
14.7	Changes during processes not requiring heat application	345
14.8	Future trends	350
14.9	References	351

15	The use of natural antioxidants in food products of plant origin	355
	<i>Professor Jan Pokorný and Dr Ludmila Trojáková, Prague Institute of Chemical Technology, and Dr Mária Takácsová, Slovak Technical University, Bratislava</i>	
15.1	Introduction	355
15.2	Application of antioxidants in edible oils	356
15.3	Application of emulsified fat products	359
15.4	Stabilisation of frying oils and fried foods	361
15.5	Application in products from nuts and oilseeds	363
15.6	Application in cereal products	364
15.7	Application in fruits and vegetables	366
15.8	Application in flavouring agents, spices and essential oils	366
15.9	Application in eco (bio) agrotechnology products	367
15.10	Future trends	367
15.11	References	368
