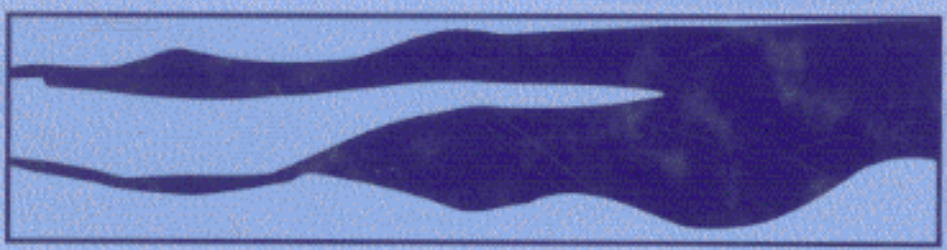
Applied Contaminant Transport Modeling

Second Edition

Chunmiao Zheng
Gordon D. Bennett



CONTENTS

Preface xvii

Preface to the First Edition xix

1 INTRODUCTION 1

1.1 Solute Transport and the Role of Simulation 1

1.2 A Historical Perspective 5

1.2.1 Pre-1960s Era 5

1.2.2 Post-1960s Era 6

1.3 About This Book 8

1.4 A Note on Computer Software 10

PART 1 CONCEPTS AND TECHNIQUES 11

2 DARCY'S LAW AND ADVECTIVE TRANSPORT 13

2.1 Average Particle Velocity and Time of Travel 13

2.2 Generalization of Darcy's Law and Equation of Groundwater Flow 17

2.3 Advective Transport 20

2.3.1 Mass-Balance Considerations and the Eulerian Approach to Advective Transport 20

2.3.2 The Particle Tracking Approach to Advective Transport 29

Further Reading and Problems 32

3 DISPERSIVE TRANSPORT AND MASS TRANSFER **34**
3.1 Introduction 34
3.2 Microscopic Dispersive Processes 35
3.2.1 Mechanism of Hydrodynamic Dispersion 35
3.2.2 The Analogy between Dispersive Transport and Molecular Diffusion 41
3.2.3 Dispersive Flux and Dispersion Coefficient in Two Dimensions 44
3.2.4 Dispersive Flux and Dispersion Coefficient in Three Dimensions 53
3.2.5 Porosity in Solute Transport Calculation 56
3.3 Macroscopic Dispersion 57
3.4 Development of the Advection–Dispersion Equation 65
3.5 Advective–Diffusive Systems 71
Further Reading and Problems 76

4 TRANSPORT WITH CHEMICAL REACTIONS **78**
4.1 Introduction 78
4.2 Equilibrium-Controlled Sorption 80
4.2.1 Sorption Isotherms and the Representation of Sorption in Transport Equations 80
4.2.2 Sorption of Organic Compounds 87
4.2.3 Ion Exchange 88
4.3 Kinetic Sorption 91
4.4 First-Order Irreversible Reactions 92
4.5 Monod Kinetic Reactions 95
4.6 Multispecies Kinetic Reactions 97
4.6.1 Instantaneous Reactions 98
4.6.2 Multiple Monod Kinetics 100
4.6.3 First-Order Parent–Daughter Chain Reactions 101
4.7 Reactions in a Dual-Domain System 103
Further Reading and Problems 105

5 MATHEMATICAL MODEL AND ANALYTICAL SOLUTIONS **107**
5.1 Mathematical Model of Solute Transport 107
5.1.1 Governing Equations 107
5.1.2 Initial Conditions 110
5.1.3 Boundary Conditions 110
5.1.4 Solution of the Mathematical Model 114
5.2 Analytical Solutions 114
Further Reading and Problems 119

6 SIMULATION OF ADVECTIVE TRANSPORT **123**
6.1 Introduction 123
6.2 Particle Tracking Method 124
6.2.1 Velocity Interpolation 125
6.2.2 Tracking Schemes 139
6.2.3 Effect of Spatial Discretization 150
6.3 Capture Zone Delineation 156
6.3.1 Two-Dimensional Steady-State Flows 156
6.3.2 Three-Dimensional Steady-State Flows 158
6.3.3 Transient Flows 159
6.4 Evaluation of Travel Times 161
6.4.1 Contaminant Arrival/Breakthrough Distribution 162
6.4.2 Cleanup Times 164
6.4.3 Residence Times and Geochemical Evolution 166
6.5 General Particle Tracking Codes 166
Further Reading and Problems 167

7 SIMULATION OF ADVECTIVE–DISPERSIVE TRANSPORT **171**
7.1 Introduction 171
7.2 Eulerian Methods 173
7.2.1 Finite-Difference Method 173
7.2.2 Finite-Element Method 195
7.2.3 Finite Element versus Finite Difference 202
7.3 Lagrangian Methods 203
7.3.1 Random-Walk Method 203
7.4 Mixed Eulerian–Lagrangian Methods 209
7.4.1 Method of Characteristics (MOC) 211
7.4.2 Modified Method of Characteristics (MMOC) 219
7.4.3 Hybrid Method of Characteristics 221
7.4.4 General Mixed Eulerian–Lagrangian Codes 222
7.5 Total-Variation-Diminishing (TVD) Methods 223
7.5.1 The ULTIMATE Scheme 223
Further Reading and Problems 231

8 SIMULATION OF NONEQUILIBRIUM PROCESSES AND REACTIVE TRANSPORT **235**
8.1 Introduction 235
8.2 Nonequilibrium Sorption 236
8.3 Dual-Domain Mass Transfer 238

8.4 Multispecies Kinetic Reactions 240
8.4.1 Simultaneous Solution 240
8.4.2 Operator Splitting 242
8.5 Coupled Transport and Geochemical Modeling 243
8.6 General Reactive Transport Codes 245
8.7 A Case Study: Modeling Natural Attenuation 247
8.7.1 Site Description 247
8.7.2 Modeling Approach 248
8.7.3 Numerical Model 252
8.7.4 Discussion of Results 253
Further Reading and Problems 255

PART 2 FIELD APPLICATIONS 259

9 A FRAMEWORK FOR MODEL APPLICATIONS 261
9.1 The Model Application Process 261
9.2 Defining Goals 262
9.3 Data Collection and Conceptual Model Development 263
9.4 Selection of a Computer Code 264
9.5 Building a Contaminant Transport Model 267
9.6 Model Calibration and Sensitivity Analysis 267
9.7 Prediction and Uncertainty 268
9.8 Keys to Successful Model Applications 269
Further Reading and Problems 270

10 BUILDING A CONTAMINANT TRANSPORT MODEL 271
10.1 Getting Started 271
10.1.1 Present Understanding of the Flow System 271
10.1.2 Dimensions of Analysis 272
10.1.3 Domains of Simulation 272
10.2 Spatial Discretizations 273
10.2.1 Horizontal Nodal Spacing 273
10.2.2 Vertical Discretization 276
10.3 Temporal Discretizations 279
10.4 Initial Conditions 282
10.5 Boundary Conditions 283
10.5.1 Use of the Specified-Concentration Condition 283
10.5.2 Use of the Specified-Mass-Flux Condition 284
10.5.3 Role of Flow Model Boundary Conditions in Solute Transport 284

10.5.4 Comparison between Flow and Transport Boundary Conditions 285
10.5.5 A Note on Scale Difference in Flow and Transport Simulation 286
10.6 Sources and Sinks 287
10.6.1 Types of Sources and Sinks 287
10.6.2 Concentrations of Sources and Sinks 288
10.7 Data Management 290
10.7.1 Preprocessing and Postprocessing 290
10.7.2 Geographic Information System (GIS) 292
Further Reading and Problems 293

11 MODEL INPUT PARAMETERS 294
11.1 Data Needs in Transport Modeling 294
11.2 Flow Parameters 295
11.2.1 Hydraulic Conductivity 295
11.2.2 Storage Coefficient and Specific Yield 298
11.3 Transport Parameters 300
11.3.1 Porosity 300
11.3.2 Dispersity 302
11.4 Chemical Parameters 306
11.4.1 Sorption Constants 306
11.4.2 Kinetic Reaction Rates 313

12 MODEL CALIBRATION AND SENSITIVITY ANALYSIS 316
12.1 Basic Concepts of Model Calibration 316
12.1.1 The Calibration Process 316
12.1.2 Calibration, Verification, and Validation 317
12.1.3 The Nonuniqueness Problem 318
12.2 Assessment of Model Calibration 318
12.2.1 Statistical Measures of Goodness of Fit 318
12.2.2 Other Considerations in Assessing Model Calibration 320
12.2.3 Presentation of Calibration Results 321
12.3 Calibration by Trial and Error 321
12.3.1 Procedure and Limitation 321
12.3.2 Case Studies 326
12.4 "Automated" Calibration 328
12.4.1 Can Calibration Be Automated? 328
12.4.2 Techniques for Automated Parameter Identification 331
12.4.3 A Case Study 338

12.5 Sensitivity Analysis 343
12.5.1 Sensitivity Coefficients 343
12.5.2 Procedure for Sensitivity Analysis 345
Further Reading and Problems 348

13 DEALING WITH UNCERTAINTY 349
13.1 Introduction 349
13.2 Types and Sources of Uncertainty 350
13.3 Methods for Evaluating Uncertainty 352
13.3.1 Sensitivity Analysis 352
13.3.2 Monte Carlo Method 353
13.3.3 First-Order Error Analysis 361
13.4 Managing Uncertainty 363
13.4.1 Reduction of Uncertainty 363
13.4.2 Decisionmaking under Uncertainty 363
Further Reading and Problems 366

14 CONTAMINANT TRANSPORT MODELING: CASE STUDIES 367
14.1 Modeling Contaminant Migration from a Landfill at the Borden Site in Canada 367
14.1.1 Site Description 367
14.1.2 Historical Perspective 369
14.1.3 Two-Dimensional Modeling 373
14.1.4 Three-Dimensional Modeling 383
14.2 Evaluating Remedial Alternatives at a Superfund Site in New Jersey 392
14.2.1 Site Description 392
14.2.2 Remedial Objectives 395
14.2.3 The Modeling Approach 395
14.2.4 Evaluation of Alternatives 404
14.3 Assessing Aquifer Susceptibility to Contamination at an Agricultural Field in Wisconsin 413
14.3.1 Site Description 414
14.3.2 Groundwater Flow Model 415
14.3.3 Particle Tracking and Assessment of Aquifer Susceptibility 417
14.3.4 Transport Modeling and Evaluation of Long-Term Impacts 418

14.4 Application of the Dual-Domain Mass Transfer Approach to the MADE Site in Mississippi 427
14.4.1 Site Description 427
14.4.2 The MADE-2 Tracer Test 429
14.4.3 Spatial Discretization and Boundary Conditions 430
14.4.4 Assignment of Hydraulic and Transport Properties 431
14.4.5 Simulation Results for the Kriged Hydraulic Conductivity Field 433
14.4.6 Simulation Results for the Fractal Hydraulic Conductivity Field 437
14.4.7 Comparison and Discussion 439
14.4.8 Sensitivity of Dual-Domain Model Parameters 440

PART 3 ADVANCED TOPICS 443

15 SIMULATION OF DENSITY-DEPENDENT FLOW AND TRANSPORT 445
15.1 Introduction 445
15.2 The Flow Equation for Variable-Density Conditions 447
15.3 The Relationship between Solute Concentration and Water Density 453
15.4 The Solute Transport Equation 453
15.5 General Solution Sequence 455
15.6 Sharp Interface Approach 458
15.7 General Variable-Density Codes 459
15.8 A Case Study: Seawater Intrusion Modeling 460
15.8.1 Background 460
15.8.2 Cross-Sectional Simulations 462
15.8.3 Three-Dimensional Simulation 465
Further Reading and Problems 471

16 SIMULATION OF FLOW AND TRANSPORT IN THE VADOSE ZONE 473
16.1 Introduction 473
16.2 Basic Concepts of Vadose Zone Hydrology 474
16.3 Flow Equation for Partially Saturated Conditions 478
16.4 Solute Transport under Partial Saturation 482
16.4.1 Basic Transport Equation 482

16.4.2 Implications of Partial Saturation for Dispersive Transport 483
16.4.3 Dual-Domain Systems 484
16.5 Extension to the Air Phase 485
16.5.1 Air–Water Partitioning 485
16.5.2 Air-Phase Transport 486
16.6 General Variably Saturated Codes 488
16.7 An Illustrative Example 489
Further Reading and Problems 493

17 OPTIMAL MANAGEMENT OF GROUNDWATER QUALITY 494
17.1 Introduction 494
17.2 The Simulation–Optimization Approach 495
17.3 Optimization Techniques 498
17.3.1 Linear Programming 499
17.3.2 Genetic Algorithms 503
17.3.3 Simulated Annealing 507
17.3.4 Tabu Search 511
17.4 Optimal Management Examples 513
17.4.1 A Hypothetical Example 513
17.4.2 A Field Example 520
Further Reading and Problems 528

APPENDIX A DARCY'S LAW AND THE VARIABLE-DENSITY FLOW EQUATION 529
A.1 Darcy's Law 529
A.2 The Variable-Density Flow Equation 534

APPENDIX B APPLICATION OF STREAM FUNCTIONS TO GROUNDWATER FLOWS 541
B.1 Introduction 541
B.2 Basic Concepts of Stream Functions 541
B.3 Analytical Solutions 545
B.4 Numerical Solutions 550
B.4.1 Governing Equation 550
B.4.2 Boundary Conditions 551
B.4.3 Sinks or Sources 552
B.4.4 Examples 553

B.5 Stream functions in Three-Dimensional Flows 554
B.6 Summary 556
Acknowledgement 556

APPENDIX C INFORMATION ON GROUNDWATER MODELING SOFTWARE 557
C.1 How to Obtain and Use the Companion Software 557
C.2 Groundwater Modeling Links 558
