CRC PRESS

Contents

Background Prerequisites *1*

Introduction 3

- Wastewater 3
- Physical–Chemical Treatment of Water and Wastewater 3
- Unit Operations and Unit Processes 4
- Coverage 6
- Clean Water Act 6
  - Regulatory Requirements 12
  - Federal Financial Assistance 13
  - Permits and Enforcement 14
  - Federal and State Relationships 16
- Safe Drinking Water Act 16
  - Highlights of the Safe Drinking Water Act 20
  - Development of MCLs and MCLGs 21
  - Drinking Water Regulations under the Act 22
  - Federal Financial Assistance 23
  - Federal and State Relationships 23
- Relationship of This Book to the Acts 23
- Glossary 24

Background Chemistry and Fluid Mechanics 25

- Units Used in Calculation 25
- General Chemistry 29
  - Equivalents and Equivalent Masses 29
  - Methods of Expressing Concentrations 35
  - Activity and Active Concentration 41
  - Equilibrium and Solubility Product Constants 41
  - Acids and Bases 51
- Fluid Mechanics 56
  - Integration Symbols 56
  - Vectors 57
  - Gauss–Green Divergence Theorem 58
  - Partial versus Total Derivative 60
  - Reynolds Transport Theorem 61
- Glossary 69
- Problems 70
- Bibliography 72

PART I
Characteristics of Water and Wastewater 73

Chapter 1 Quantity of Water and Wastewater 75

1.1 Probability Distribution Analysis 75
1.1.1 Addition and Multiplication Rules of Probability 75
1.1.2 Values Equaled or Exceeded 79
1.1.3 Derivation of Probability from Recorded Observation 79
1.1.4 Values Equaled or Not Exceeded 82
1.2 Quantity of Water 84
1.2.1 Design Period 86
1.3 Types of Wastewater 88
1.4 Sources and Quantities of Wastewater 90
1.4.1 Residential 90
1.4.2 Commercial 91
1.4.3 Institutional 92
1.4.4 Recreational 92
1.4.5 Industrial 92
1.5 Population Projection 93
1.5.1 Arithmetic Method 94
1.5.2 Geometric Method 94
1.5.3 Declining-Rate-of-Increase Method 95
1.5.4 Logistic Method 96
1.5.5 Graphical Comparison Method 98
1.6 Derivation of Design Flows of Wastewaters 99
1.6.1 Design Flows 99
1.7 Deriving Design Flows of Wastewaters from Field Survey 101
1.7.1 Average Daily Flow Rate 103
1.7.2 Peak Hourly Flow Rate 104
1.7.3 Maximum Daily Flow Rate 106
1.7.4 Minimum Hourly Flow Rate and Minimum Daily Flow Rate 107
1.7.5 Sustained Peak Flow Rate and Sustained Minimum Flow Rate 110
1.7.6 Infiltration–Inflow 112
1.7.7 Summary Comments for Deriving Flow Rates by the Probability Distribution Analysis 115
Glossary 116
Symbols 118
Problems 118
Bibliography 123

Chapter 2 Constituents of Water and Wastewater 125

2.1 Physical and Chemical Characteristics 125
2.1.1 Turbidity 125
2.1.2 Color 126
2.1.3 Taste 126
2.1.4 Odor 127
2.1.5 Temperature 128
2.1.6 Chlorides 128
2.1.7 Fluorides 128
2.1.8 Iron and Manganese 128
2.1.9 Lead and Copper 129
2.1.10 Nitrate 129
2.1.11 Sodium 129
2.1.12 Sulfate 129
2.1.13 Zinc 129
2.1.14 Biochemical Oxygen Demand 130
2.1.15 Nitrification in the BOD Test 132
2.1.16 Mathematical Analysis of BOD Laboratory Data 134
2.1.17 Solids 137
2.1.18 pH 139
2.1.19 Chemical Oxygen Demand 140
2.1.20 Total Organic Carbon 141
2.1.21 Nitrogen 141
2.1.22 Phosphorus 142
2.1.23 Acidity and Alkalinity 143
2.1.24 Fats, Oils, Waxes, and Grease 144
2.1.25 Surfactants 145
2.1.26 Priority Pollutants 146
2.1.27 Volatile Organic Compounds 146
2.1.28 Toxic Metal and Nonmetal Ions 146
2.2 Normal Constituents of Domestic Wastewater 147
2.3 Microbiological Characteristics 147
2.3.1 Bacteria 148
2.3.2 Test for the Coliform Group 150
2.3.3 The Poisson Distribution 153
2.3.4 Estimation of Coliform Densities by the MPN Method 155
2.3.5 Interpolation or Extrapolation of the MPN Table 158
2.3.6 Viruses 161
2.3.7 Protozoa 161
Glossary 170
Symbols 174
Problems 175
Bibliography 176

PART II
Unit Operations of Water and Wastewater Treatment..... 179

Chapter 3 Flow Measurements and Flow and Quality Equalizations 181

3.1 Flow Meters 181
3.1.1 Rectangular Weirs 181
3.1.2 Triangular Weirs 186
3.1.3 Trapezoidal Weirs 189
3.1.4 Venturi Meters 189
3.1.5 Parshall Flumes 192
3.2 Miscellaneous Flow Meters 196
3.3 Liquid Level Indicators 197
3.4 Flow and Quality Equalizations 198
Glossary 205
Symbols 206
Problems 207
Bibliography 209

Chapter 4 Pumping 211

4.1 Pumping Stations and Types of Pumps 211
4.2 Pumping Station Heads 215
4.2.1 Total Developed Head 216
4.2.2 Inlet and Outlet Manometric Heads; Inlet and Outlet Dynamic Heads 218
4.3 Pump Characteristics and Best Operating Efficiency 221
4.4 Pump Scaling Laws 225
4.5 Pump Specific Speed 229
4.6 Net Positive Suction Head and Deep-Well Pumps 231
4.7 Pumping Station Head Analysis 233
Glossary 236
Symbols 238
Problems 239
Bibliography 241

Chapter 5 Screening, Settling, and Flotation 243

5.1 Screening 243
5.1.1 Head Losses in Screens and Bar Racks 245
5.1.2 Head Loss in Microstrainers 247
5.2 Settling 248
5.2.1 Flow-Through Velocity and Overflow Rate of Settling Basins 251

5.2.2 Discrete Settling 253
5.2.3 Outlet Control of Grit Channels 259
5.2.4 Flocculent Settling 264
5.2.5 Primary Settling and Water-Treatment Sedimentation Basins 266
5.2.6 Zone Settling 271
5.2.7 Secondary Clarification and Thickening 273
5.3 Flotation 278
5.3.1 Laboratory Determination of Design Parameters 280
Glossary 283
Symbols 284
Problems 286
Bibliography 290

Chapter 6 Mixing and Flocculation 293

6.1 Rotational Mixers 293
6.1.1 Types of Impellers 293
6.1.2 Prevention of Swirling Flow 296
6.1.3 Power Dissipation in Rotational Mixers 297
6.2 Criteria for Effective Mixing 301
6.3 Pneumatic Mixers 303
6.3.1 Prediction of Number of Bubbles and Rise Velocity 303
6.3.2 Power Dissipation in Pneumatic Mixers 305
6.4 Hydraulic Mixers 307
6.4.1 Power Dissipation in Hydraulic Mixers 308
6.4.2 Mixing Power for Hydraulic Jumps 308
6.4.3 Volume and Detention Times of Hydraulic-Jump Mixers 309
6.4.4 Mixing Power for Weir Mixers 311
6.5 Flocculators 312
Glossary 318
Symbols 319
Problems 321
Bibliography 325

Chapter 7 Conventional Filtration 327

7.1 Types of Filters 327
7.2 Medium Specification for Granular Filters 335
7.3 Linear Momentum Equation Applied to Filters 337
7.4 Head Losses in Grain Filters 339
7.4.1 Clean-Filter Head Loss 339
7.4.2 Head Losses Due to Deposited Materials 343
7.5 Backwashing Head Loss in Granular Filters 352
7.6 Cake Filtration 355
7.6.1 Determination of $\bar{\alpha}$ 357

7.6.2 Design Cake Filtration Equation 359
7.6.3 Determination of Cake Filtration Parameters 360
Glossary 363
Symbols 364
Problems 365
Bibliography 371

Chapter 8 Advanced Filtration and Carbon Adsorption 373

8.1 Electrodialysis Membranes 373
8.1.1 Power Requirement of Electrodialysis Units 374
8.2 Pressure Membranes 376
8.2.1 Membrane Module Designs 380
8.2.2 Factors Affecting Solute Rejection and Breakthrough 380
8.2.3 Solute-Water Separation Theory 381
8.2.4 Types of Membranes 382
8.2.5 Membrane Performance Characterization 385
8.3 Carbon Adsorption 391
8.3.1 Activation Techniques 392
8.3.2 Adsorption Capacity 393
8.3.3 Determination of the Freundlich Constants 395
8.3.4 Determination of the Langmuir Constants 396
8.3.5 Bed Adsorption and Active Zone 399
8.3.6 Relative Velocities in Bed Adsorption 404
8.3.7 Head Losses in Bed Adsorption 405
Glossary 406
Symbols 407
Problems 408
Bibliography 414

Chapter 9 Aeration, Absorption, and Stripping 419

9.1 Mass Transfer Units 420
9.2 Interface for Mass Transfer, and Gas and Liquid Boundary Layers 424
9.3 Mathematics of Mass Transfer 426
9.4 Dimensions of the Overall Mass Transfer Coefficients 429
9.5 Mechanics of Aeration 429
9.5.1 Equipment Specification 430
9.5.2 Determination of Aeration Parameters 432
9.5.3 Calculation of Actual Oxygen Requirement, the AOR 439
9.5.4 Time of Contact 443
9.5.5 Sizing of Aeration Basins and Relationship to Contact Time 443
9.5.6 Contact for Bubble Aerators 444
9.6 Absorption and Stripping 446
9.6.1 Sizing of Absorption and Stripping Towers 446
9.6.2 Operating Line 446

9.6.3 Tower Height 447
9.6.4 Ammonia Stripping (or Absorption) 450
Glossary 453
Symbols 454
Problems 456
Bibliography 463

PART III
Unit Processes of Water and Wastewater Treatment 465

Chapter 10 Water Softening 467

10.1 Hard Waters 467
10.2 Types of Hardness 467
10.3 Plant Types for Hardness Removal 468
10.4 The Equivalent $CaCO_3$ Concentration 468
10.5 Softening of Calcium Hardness 472
10.6 Softening of Magnesium Hardness 473
10.7 Lime–Soda Process 474
10.7.1 Calculation of Stoichiometric Lime Required in the Lime–Soda Process 475
10.7.2 Key to Understanding Subscripts 476
10.7.3 Calculation of Stoichiometric Soda Ash Required 478
10.7.4 Calculation of Solids Produced 479
10.8 Order of Removal 481
10.9 Role of CO_2 in Removal 481
10.10 Excess Lime Treatment and Optimum Operational pH 482
10.11 Summary of Chemical Requirements and Solids Produced 484
10.12 Sludge Volume Production 485
10.13 Chemical Species in the Treated Water 485
10.13.1 Limits of Technology 485
10.13.2 Concentration of Ca^{2+} 486
10.13.3 Concentration of Mg^{2+} 487
10.13.4 Concentration of HCO_3^- 488
10.13.5 Concentration of CO_3^{2-} 490
10.13.6 Concentration of Na^+ 490
10.14 Relationships of the Fractional Removals 490
10.15 Notes on Equivalent Masses 492
10.16 Typical Design Parameters and Criteria 499
10.17 Split Treatment 499
10.18 Use of Alkalinity in Water Softening Calculations 505
Glossary 506

Symbols 506
Problems 508
Bibliography 511

Chapter 11 Water Stabilization 513

11.1 Carbonate Equilibria 513
11.1.1 Ionic Strength 514
11.1.2 Equilibrium Constant as a Function of Temperature 516
11.1.3 ΔH^{o}_{298}'s for Pertinent Chemical Reactions of the Carbonate Equilibria 518
11.2 Criteria for Water Stability at Normal Conditions 520
11.2.1 Saturation pH and the Langelier Index 520
11.2.2 Determination of $\{Ca^{2+}\}$ 526
11.2.3 Total Alkalinity as Calcium Carbonate 530
11.2.4 Precipitation Potential 531
11.2.5 Determination of Percent Blocking Potential of Pipes 533
11.3 Recarbonation of Softened Water 534
Glossary 536
Symbols 537
Problems 538
Bibliography 541

Chapter 12 Coagulation 545

12.1 Colloid Behavior 545
12.2 Zeta Potential 546
12.3 Colloid Destabilization 548
12.4 Coagulation Process 551
12.4.1 Coagulants for the Coagulation Process 551
12.4.2 Coagulant Aids 552
12.4.3 Rapid Mix for Complete Coagulation 552
12.4.4 The Jar Test 553
12.5 Chemical Reactions of Alum 553
12.5.1 Determination of the Optimum pH 555
12.6 Chemical Reactions of the Ferrous Ion 560
12.6.1 Determination of the Optimum pH 560
12.7 Chemical Reactions of the Ferric Ion 561
12.7.1 Determination of the Optimum pH 562
12.8 Jar Tests for Optimum pH Determination 567
12.9 Chemical Requirements 567
12.9.1 Chemical Requirements in Alum Coagulation Treatment 568
12.9.2 Key to Understanding Subscripts 570
12.9.3 Chemical Requirements in Ferrous Coagulation Treatment 571
12.9.4 Chemical Requirements in Ferric Coagulation Treatment 574
12.10 Chemical Requirements for pH Adjustments 577

12.11 Alkalinity and Acidity Expressed as $CaCO_3$ 578
12.12 Sludge Production 579
Glossary 581
Symbols 583
Problems 586
Bibliography 591

Chapter 13 Removal of Iron and Manganese by Chemical Precipitation 593

13.1 Natural Occurrences of Iron and Manganese 594
13.2 Modes of Removal of Iron and Manganese 595
13.3 Chemical Reactions of the Ferrous and the Ferric Ions 595
13.3.1 Practical Optimum pH Range for the Removal of Ferrous and Ferric 598
13.4 Chemical Reactions of the Manganous Ion [Mn(II)] 601
13.4.1 Determination of the Optimum pH 601
13.4.2 Practical Optimum pH Range for the Removal of Manganese 604
13.5 Oxidation of Iron and Manganese to Reduce Precipitation pH 604
13.6 Unit Operations for Iron and Manganese Removal 606
13.6.1 High pH Range 607
13.6.2 Low pH Range 607
13.7 Chemical Requirements 608
13.7.1 Requirements in the Ferrous Reactions 608
13.7.2 Requirements in the Manganous Reactions 609
13.8 Alkalinity Expressed in OH^- and Acidity Expressed in H^+ 613
13.9 Chemical Requirements for pH Adjustments 613
13.10 Sludge Production 617
Glossary 619
Symbols 619
Problems 621
Bibliography 624

Chapter 14 Removal of Phosphorus by Chemical Precipitation 627

14.1 Natural Occurrence of Phosphorus 627
14.2 Modes of Phosphorus Removal 629
14.3 Chemical Reaction of the Phosphate Ion with Alum 630
14.3.1 Determination of the Optimum pH Range 633
14.4 Chemical Reaction of the Phosphate Ion with Lime 633
14.4.1 Determination of the Optimum pH and the Optimum pH Range 637
14.5 Chemical Reaction of the Phosphate Ion with the Ferric Salts 639
14.5.1 Determination of the Optimum pH and the Optimum pH Range 641

14.6 Comments on the Optimum pH Ranges 642
14.7 Effect of the K_{sp}'s on the Precipitation of Phosphorus 643
14.8 Unit Operations for Phosphorus Removal 643
14.9 Chemical Requirements 643
14.10 Sludge Production 648
Glossary 650
Symbols 651
Problems 652
Bibliography 657

Chapter 15 Removal of Nitrogen by Nitrification–Denitrification 659

15.1 Natural Occurrence of Nitrogen 659
15.2 To Remove or Not to Remove Nitrogen 660
15.3 Microbial Thermodynamics 661
15.3.1 Enthalpy and Entropy 661
15.3.2 Free Energy 663
15.4 Oxidation-Reduction Reactions of Nitrogen Foods 664
15.4.1 Criterion for Spontaneous Process 667
15.5 Modes of Nitrogen Removal 668
15.6 Chemical Reactions in Nitrogen Removal 668
15.6.1 Nitrification: *Nitrosomonas* Stage 669
15.6.2 Nitrification: *Nitrobacter* Stage 670
15.6.3 Overall Nitrification 672
15.6.4 Denitrification: Heterotrophic Side Reaction Stage 672
15.6.5 Denitrification: Normal Anoxic Stage 674
15.6.6 Denitrification: NO_2-Reduction Side Reaction Stage 675
15.7 Total Effluent Nitrogen 677
15.7.1 Units of Cell Yields 680
15.8 Carbon Requirements for Denitrification 683
15.9 Alkalinity Production and Associated Carbon Requirement 686
15.10 Reaction Kinetics 690
15.10.1 Kinetics of Growth and Food Utilization 690
15.10.2 Material Balance around the Activated Sludge Process 691
15.10.3 Nitrification Kinetics 694
15.10.4 Denitrification Kinetics 696
15.10.5 Carbon Kinetics 697
15.10.6 Reactor Sizing 698
15.10.7 Determination of Kinetic Constants 701
Glossary 706
Symbols 708
Problems 711
Bibliography 716

Chapter 16 Ion Exchange 719

16.1 Ion Exchange Reactions 719
16.2 Unit Operations of Ion Exchange 720
16.3 Sodium, Hydrogen Cycle, and Regeneration 721
16.4 Production of "Pure Water" 722
16.5 Active or Exchange Zone 726
16.6 Design of Ion Exchangers 728
16.6.1 Quantity of Exchange Materials 728
16.6.2 Quantity of Regenerant 730
16.6.3 Wastewater Production 731
16.7 Head Losses in Ion Exchangers 733
Glossary 733
Symbols 733
Problems 735
Bibliography 737

Chapter 17 Disinfection 739

17.1 Methods of Disinfection and Disinfectant Agents Used 739
17.2 Factors Affecting Disinfection 740
17.2.1 Time of Contact and Intensity of Disinfectant 740
17.2.2 Age of the Microorganism 743
17.2.3 Nature of the Suspending Fluid 744
17.2.4 Effect of Temperature 744
17.3 Other Disinfection Formulas 746
17.4 Chlorine Disinfectants 746
17.4.1 Chlorine Chemistry 747
17.4.2 Design of Chlorination Unit Operations Facilities 764
17.5 Dechlorination 771
17.5.1 Chemical Reactions Using Sulfur Dechlorinating Agents 772
17.5.2 Chemical Reactions Using Activated Carbon 772
17.5.3 Effect of Dechlorinated Effluents on Dissolved Oxygen of Receiving Streams 774
17.5.4 Unit Operations in Dechlorination 775
17.6 Disinfection Using Ozone 775
17.6.1 Unit Operations in Ozonation 777
17.7 Disinfection Using Ultraviolet Light 777
17.7.1 Unit Operations in UV Disinfection 779
Glossary 780
Symbols 781
Problems 781
Bibliography 785

Appendices and Index *789*

Appendix 1 Density and Viscosity of Water 791

Appendix 2 Atomic Masses of the Elements Based on C-12 793

Appendix 3 Saturation Values of Dissolved Oxygen Exposed to Saturated Atmosphere at One Atmosphere Pressure at Given Temperatures 797

Appendix 4 SDWA Acronyms 799

Appendix 5 Sample Drinking Water VOCs 801

Appendix 6 Sample Drinking Water SOCs and IOCs 803

Appendix 7 Secondary MCLs for a Number of Substances 805

Appendix 8 Some Primary Drinking-Water Criteria 807

Appendix 9 Some Secondary Drinking-Water Criteria 809

Appendix 10 Physical Constants 811

Appendix 11 Conversion Factors 813

Index 815
