

HANDBOOK OF POLYELECTROLYTES AND THEIR APPLICATIONS

2

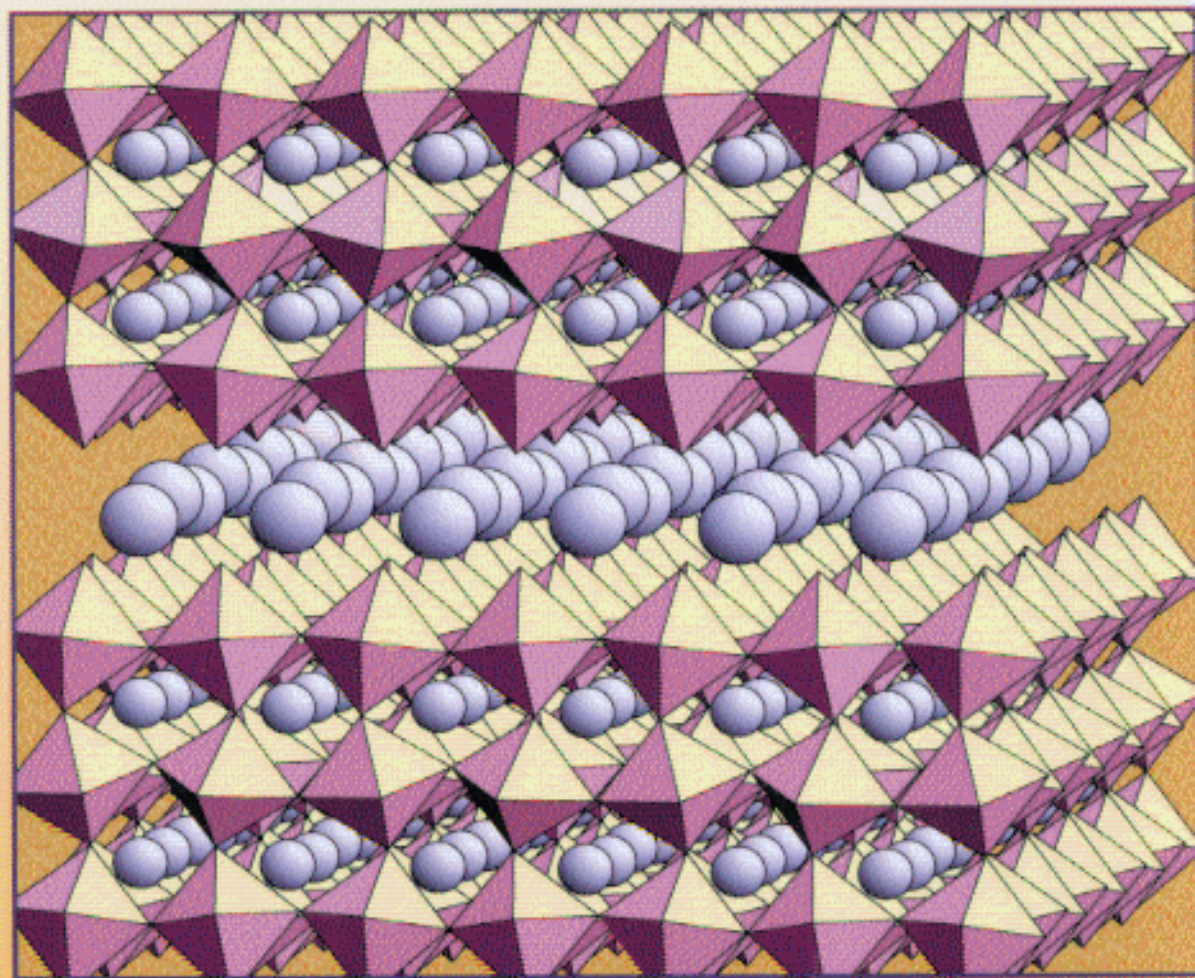

Edited by

Sukant K. Tripathy, Jayant Kumar and Hari Singh Nalwa

Foreword by

Alan G. MacDiarmid, Nobel Laureate

Polyelectrolytes, Their Characterization and Polyelectrolyte Solutions

About the Editors	xxix

Chapter 1. AMPHIPHILIC POLYELECTROLYTES

Akihito Hashidzume, Yotaro Morishima, Krzysztof Szczubiatka

1. Introduction	2
2. General Considerations	2
3. Synthesis	3
3.1. Synthesis of Amphiphilic Block Polyelectrolytes	3
3.2. Synthesis of Random or Alternating Amphiphilic Polyelectrolytes	6
4. Characterization Methods	8
4.1. Methods with Long Dimensional Range	8
4.2. Methods with Intermediate Dimensional Range	9
4.3. Methods with Short Dimensional Range	10
5. Block Amphiphilic Polyelectrolytes	12
5.1. General Aspects of Association in Block Amphiphilic Polyelectrolytes	12
5.2. Self-Associative Behavior of Block Polyelectrolytes	13
5.3. Attachment of Block Polyelectrolytes to Surfaces	18
5.4. Some Characteristics of Block Polyelectrolyte Micelles	20
5.5. Applications of Block Polyelectrolytes	24
6. Random and Alternating Amphiphilic Polyelectrolytes	25
6.1. General Aspects of Self-Association of Random and Alternating Amphiphilic Polyelectrolytes	25
6.2. Examples of Amphiphilic Polyanions	26
6.3. Examples of Amphiphilic Polycations	51
6.4. Examples of Amphiphilic Polyampholytes	56
7. Concluding Remarks	56
Abbreviations	57
References	57

Chapter 2. FORMATION AND ELECTRONIC PROPERTIES OF POLYANILINE-BASED POLYELECTROLYTES

O. P. Dimitriev

1. Introduction	65
2. Electronic Properties of Emeraldine Salts	66
2.1. Insulator-to-Metal Transition in an Ideal One-Dimensional Polyaniline Chain	66
2.2. A Real Polymer Molecule: Conformational Changes	67
2.3. Intramolecular Electronic Transitions	69
2.4. Charge Transport in the Bulk Material	70
3. Formation of Emeraldine-Based Polyelectrolyte Chains	73
3.1. Protonic Acid Doping	73
3.2. Effect of Solvent	74
3.3. Pseudoprotonation	77
3.4. Charge-Transfer Interactions	78
3.5. Interactions with Transition and Heavy Metals	79
4. Formation of the Bulk Material	80
4.1. Morphology of Polyaniline	80
4.2. Correlation Between Morphology and Electrical Conductivity	81
4.3. Crystallinity of Polyaniline	82
4.4. Formation of Polyaniline Thin Films	84

5. Conclusions	87
Acknowledgments	88
References	88

Chapter 3. DETERMINATION OF MOLAR MASSES OF POLYELECTROLYTES

Peter M. Budd

1. Introduction	92
1.1. Molar Mass, Molar Mass Distributions, and Average Molar Masses	92
1.2. Other Measures of Molecular Size	93
1.3. Polyelectrolyte Behavior	93
1.4. Solution Preparation	94
2. Colligative Properties	95
2.1. Principles of Membrane Osmometry	95
2.2. Membrane Osmometry of Polyelectrolytes	95
3. Light Scattering	95
3.1. Principles of Static Light Scattering	95
3.2. Static Light Scattering of Polyelectrolytes	97
3.3. Principles of Dynamic Light Scattering	98
3.4. Dynamic Light Scattering of Polyelectrolytes	100
4. Analytical Ultracentrifugation	100
4.1. Principles of Analytical Ultracentrifugation	100
4.2. Theory of Centrifugation	101
4.3. Analytical Ultracentrifugation of Polyelectrolytes	103
5. Hydrodynamic Properties	104
5.1. Principles of Dilute Solution Viscometry	104
5.2. Principles of Diffusion Measurements	105
5.3. Molar Masses and Hydrodynamic Radii from Hydrodynamic Properties	106
5.4. Dilute Solution Viscometry of Polyelectrolytes	107
5.5. Sedimentation and Diffusion of Polyelectrolytes	107
6. Gel Permeation Chromatography	109
6.1. Principles of Gel Permeation Chromatography	109
6.2. Gel Permeation Chromatography of Polyelectrolytes	110
7. Field-Flow Fractionation	110
7.1. Principles of Field-Flow Fractionation	110
7.2. Field-Flow Fractionation of Polyelectrolytes	111
8. Electrophoresis	111
8.1. Principles of Electrophoresis	111
8.2. Electrophoresis of Polyelectrolytes	111
9. Mass Spectrometry	111
9.1. Principles of Mass Spectrometry	111
9.2. Mass Spectrometry of Polyelectrolytes	112
10. End Group Analysis	112
References	112

Chapter 4. CHARACTERIZATION OF POLYELECTROLYTES BY DYNAMIC LASER LIGHT SCATTERING

H. B. Bohidar

1. Introduction	117
2. Theory of Light Scattering	119
2.1. Time Fluctuation and Correlation Functions	120
2.2. Light Scattering in the Limit $K\xi/2\pi \ll 1$	121
2.3. Light Scattering in the Limit $K\xi/2\pi \gg 1$	122
2.4. Principle of Operation of Correlator	122
2.5. Signal-to-Noise Behavior	123
2.6. Data Analysis	124

3. Polyelectrolytes in Solution	126
3.1. Electrostatic Interactions and Screening	127
3.2. Electrophoretic Mobility	128
3.3. Dynamics of Polyelectrolytes in Solutions	128
4. Specific Examples	131
4.1. Persistence Length and Viscosity of Vinylic Polyelectrolytes	131
4.2. Poly(dimethyldiallylammonium Chloride)	132
4.3. Poly(methacrylic acid)	135
4.4. Gelatin	136
4.5. Poly(vinyl alcohol)	138
4.6. Poly(vinylpyrrolidone)	138
4.7. Poly(ethylene oxide)	139
4.8. Poly(styrenesulfonate)	140
4.9. Other Systems	142
5. Conclusion	143
References	144

Chapter 5. STUDY OF POLYION COUNTERION INTERACTION BY ELECTROCHEMICAL METHODS

Christine Wandrey, David Hunkeler

1. Introduction	147
2. Theoretical Aspects	148
2.1. Definitions, Relevant Parameters, and General Characteristics	148
2.2. Polyelectrolyte Models	149
2.3. Concentration Ranges	150
2.4. Equilibrium Properties	151
2.5. Transport Properties	152
3. Experimental Aspects	155
3.1. Potentiometry	155
3.2. Conductometry	156
3.3. Transference Numbers	157
3.4. Preparation of Polyelectrolyte Solutions and Their Handling	157
4. Applications of Electrochemical Methods to Study Polyelectrolytes in Solution	157
4.1. Potentiometric Titration	157
4.2. Direct Potentiometry	159
4.3. Electrolytic Conductivity	162
4.4. Transference Numbers	167
5. Concluding Remarks and Outlook	168
List of Symbols	169
Acknowledgments	169
References	170

Chapter 6. DETERMINATION OF EFFECTIVE SIZE AND CHARGE OF POLYELECTROLYTES BY DIFFUSION AND ELECTROPHORESIS NUCLEAR MAGNETIC RESONANCE (NMR)

Ulrich Scheler

1. Introduction	173
2. Nuclear Magnetic Resonance (NMR)	174
3. Spatial Information in NMR	176
4. Pulsed Field Gradient NMR	177
5. Electrophoretic NMR	178
6. Dedicated Data Processing	180

7. Ionic Strength, Polymer Conformation, and Self-Diffusion	183
8. Counterion Condensation and Effective Charge	184
9. Outlook	186
Acknowledgments	187
References	187

Chapter 7. CONTROLLABLE ASSOCIATION OF ION-CONTAINING POLYMERS IN DILUTE SOLUTION

Shufu Peng, Chi Wu

1. Introduction	190
1.1. Overview of Polyelectrolyte Studies	190
1.2. Polyelectrolyte Complex Formation	190
1.3. Aggregation Process of Polyelectrolytes	191
1.4. Main Goals	191
2. Temperature-Induced Swelling and Shrinkage of Polyelectrolytes	191
2.1. Coil-to-Globule Transition of Linear Poly(<i>N</i> -Isopropylacrylamide) Ionomers	191
2.2. Swelling and Shrinking Behavior of Linear P(VCL- <i>co</i> -NaA) Chains and Microgels	194
3. Salt-Induced Thermoreversible and Controllable Complexation	195
3.1. Ca ²⁺ -Induced Complexation of P(VCL- <i>co</i> -NaA)	195
3.2. Cation-Induced Complexation of P(VCL- <i>co</i> -NaA) Microgels	197
4. Association of a Zwitterionic Polycarboxybetaine	200
5. Surfactant Effect on pH and Temperature Sensitivities of Microgels	203
6. Complexation Between P(VCL- <i>co</i> -NaA) Microgels and Gelatin	206
7. Controllable Aggregation of Linear Chains and Spherical Microgels	208
7.1. Formation and Structure of HPAM/Ca ²⁺ Complexes	208
7.2. Comparison Between P(VCL- <i>co</i> -NaA) Microgels and Linear Chains	212
8. Formation and Stabilization of Hydrophilic Modified Polystyrene	217
8.1. Polystyrene Nanoparticles Formed in Microphase Inversion	217
8.2. CPS Chains with Different Lengths and Amounts of Hydrophilic Groups	219
8.3. Self-Assembly of CSEBS Triblock Copolymer Chains	221
Acknowledgments	223
References	223

Chapter 8. POLYELECTROLYTE-SURFACTANT INTERACTIONS

Junichi Kurawaki, Katumitu Hayakawa

1. Introduction	227
2. Strength of the Interaction	228
3. Thermodynamics	228
3.1. Cooperative Binding Isotherms	228
3.2. Cooperative Interaction: Surfactant Clustering	230
4. Properties of Polyelectrolyte/Surfactant Complexes	231
4.1. Probing Studies	231
4.2. Aggregation Numbers	233
5. Applications	236
5.1. Solubilization	236
5.2. Spectra of Probes Solubilized in Polyion/Surfactant Complexes	238
5.3. Enhanced Energy Transfer Between Solubilized Probes	238
6. Conformation of Polypeptides in Aqueous Surfactant Solutions	239
6.1. Conformation of Homopolypeptides	240
6.2. Stepwise Conformational Change of Poly(L-lysine)	241
6.3. Conformational Change and Cooperative Surfactant Binding	242
6.4. Surfactant Binding of Copolypeptides	243
6.5. Conformation of Copolypeptides in Surfactant Solutions	244
References	246

Chapter 9. STRUCTURE AND DYNAMICS OF POLYELECTROLYTE SOLUTIONS

Redouane Borsali

1. Introduction	249
1.1. Viscosity	250
1.2. Scattering	252
2. Characterization by Scattering Techniques	253
2.1. Sample Preparation	253
2.2. Scattering Techniques	254
3. Polyelectrolyte Solutions	255
3.1. Flexible Polyelectrolyte: Sodium Polystyrene	255
3.2. Semi-rigid Polyelectrolytes	256
3.3. Rigid Polyelectrolytes	260
4. Effect of Shear on Polyelectrolyte Solutions	262
5. Conclusion	263
Acknowledgments	263
References	264

Chapter 10. DEPLETION INTERACTIONS PRODUCED BY NONADSORBING POLYELECTROLYTES

John Y. Walz, Martin Piech

1. Introduction	267
2. The Force-Balance Model of Walz and Sharma for Simple Polyelectrolytes	268
2.1. Spherical Macromolecules	268
2.2. Polydisperse Systems	270
2.3. Nonspherical Macromolecules	273
2.4. Analytical Approximations	274
3. Models for Flexible Polyelectrolytes	276
4. Direct Experimental Measurement of the Depletion Interaction	277
4.1. Single Particle Measurements with Total Internal Reflection Microscopy (TIRM)	277
4.2. Depletion Measurements with Other Techniques	280
5. Measurements of Dispersion Stability	281
6. Concluding Comments and Future Directions	283
Acknowledgments	284
References	284

Chapter 11. MULTIPORPHYRIN SELF-ASSEMBLED ARRAYS IN SOLUTIONS AND FILMS: THERMODYNAMICS, SPECTROSCOPY, AND PHOTOCHEMISTRY

Eduard I. Zenkevich, Christian von Borczyskowski

1. Introduction	286
1.1. Biological Aspects and Applications	286
1.2. Synthetic Strategies in the Formation of Multiporphyrin Assemblies	287
2. Structural, Thermodynamic, and Spectral Properties of Triads and Pentads	290
2.1. Extra Ligation and a "Keyhole" Principle	290
2.2. Complexation Properties of the Dimers upon Triad Formation	292
2.3. Complexation Properties of the Extra Ligands upon Triad Formation	295
2.4. Formation and Properties of Pentads	296
3. Deactivation of Excited States in Individual Chemical Dimers	297
3.1. Energy Transfer in Cyclodimers	297
3.2. Interchromophoric Interactions in $-\text{CH}_2-\text{CH}_2-$ Bridged Dimers	299
3.3. Steric Effects in Phenyl-Bridged Dimers	300
3.4. Extra-Ligation Influence on Photophysical Properties of Dimers	303

4. Dynamics, Pathways, and Mechanisms of Relaxation Processes in Multimolecular Arrays	305
4.1. Electron Transfer in Covalently Linked (ZnOEP) ₂ Ph-A Systems	306
4.2. Excited State Properties and Relaxation Dynamics in Triads without Covalently Linked Acceptors	310
4.3. Dynamics and Pathways of Relaxation Processes in Triads with Covalently Linked Electron Acceptors	318
5. Interaction of Multimolecular Systems with Molecular Oxygen in Liquid Solutions	323
5.1. Chemical Dimers of Zn-Porphyrins and Zn-Chlorins	324
5.2. Self-Assembled Triads and Pentads without Electron Acceptors	325
6. Conclusions	326
Acknowledgments	327
References	327
