Contents

Acknowledgements	viii
Preface	x
Abbreviations	xiii
1 Human genetic disease	1
1.1 Introduction	1
1.2 Single-gene defects	2
1.3 Multifactorial or complex disorders and traits	13
1.4 Chromosomal mutations	14
1.5 Mitochondrial mutations	17
1.6 The Human Genome Project	22
1.7 Summary	23
Further reading	25
2 An introduction to the structure of the human genome	27
2.1 Introduction	27
2.2 Sequence architecture of the human genome	28
2.3 Structure of chromosomes	42
2.4 Summary	47
Further reading	49
3 Mapping the human genome	52
3.1 Introduction	52
3.2 Sequence tagged sites	55
3.3 Genetic maps	58
3.4 Physical maps	67
3.5 An integrated physical and genetic map of the human genome	81
3.6 Genome mapping is big science	83
3.7 Summary	84
Further reading	85

4	The sequence of the human genome	87
4.1	Introduction	87
4.2	Basic technology for sequencing the human genome	89
4.3	The IHGSC clone-by-clone sequencing strategy	94
4.4	The Celera shotgun sequencing	98
4.5	Single nucleotide polymorphisms	100
4.6	Accessing the data	101
4.7	Model organisms	103
4.8	Analysis of the human genome sequence	104
4.9	Exploiting the human genome sequence	122
4.10	Summary	135
	Further reading	137
5	Single-gene disorders	140
5.1	Introduction	140
5.2	Cloning disease genes	141
5.3	Cystic fibrosis	147
5.4	Duchenne muscular dystrophy	152
5.5	Trinucleotide repeat expansion mutations	154
5.6	Haemoglobinopathies	159
5.7	Inherited predisposition to cancer	164
5.8	Summary	175
	Further reading	177
6	The genetic components of complex diseases	180
6.1	Introduction	180
6.2	Evidence for a genetic component in complex disorders and phenotypic traits	182
6.3	The genetic architecture of complex diseases	185
6.4	Identifying genes involved in complex disease	193
6.5	Conclusions: complex diseases are complex	220
6.6	Summary	220
	Further reading	222
7	Gene therapy	225
7.1	Introduction	225
7.2	Types of gene therapy	226
7.3	Methods of transferring transgenes into target cells	230
7.4	Gene therapy for cystic fibrosis	237
7.5	Gene therapy for Duchenne muscular dystrophy	239
7.6	Gene therapy for bleeding disorders	240
7.7	Gene therapy for Severe Combined Immunodeficiency Syndrome	241
7.8	Gene therapy for non-heritable disorders	241
7.9	Summary	245
	Further reading	247

8 Genetic testing	249
8.1 Introduction	249
8.2 Testing for known mutations	255
8.3 Scanning genes for unknown mutations	261
8.4 Summary	268
Further reading	270
9 Human population genetics and evolution	271
9.1 Introduction	271
9.2 Basic principles in human population genetics	273
9.3 Polymorphism in protein encoding genes	281
9.4 Mitochondrial DNA polymorphisms	285
9.5 Y chromosome variation	290
9.6 Single nucleotide polymorphisms	293
9.7 Disease frequencies in different populations	295
9.8 Summary	298
Further reading	301
10 DNA fingerprinting	304
10.1 Introduction	304
10.2 Use of minisatellites for DNA fingerprinting	305
10.3 Single-locus probes	307
10.4 DNA profiling based on STRs	308
10.5 Summary	310
Further reading	311
11 Human genetics and society	312
11.1 Introduction	312
11.2 Genetic testing	315
11.3 Human rights	322
11.4 Patents	325
11.5 Gene therapy	328
11.6 Genetic determinism	329
11.7 Summary	330
Further reading	332
Glossary	334
Index	356

Further information for use with this book can be accessed via a link in the catalogue entry for *Human Molecular Genetics* on the publisher's website at <http://www.pearsoneduc.com/biology>. The aim of this facility is to provide updates and news of major advances in human genetics since publication. It also includes study guides for chapters, and cites additional website addresses that provide information of interest to human genetics. We would encourage readers to use the website regularly.
