

TBM TUNNELLING IN JOINTED AND FAULTED ROCK

Nick Barton

Contents

PREFACE	VII
---------	-----

ACKNOWLEDGEMENTS	IX
------------------	----

PART 1

BASIC INTERACTIONS BETWEEN THE ROCK MASS AND THE TBM

1. Introduction	3
2. Some basic TBM designs	4
3. Summary of common geotechnical problems	7
4. The TBM excavation disturbed zone	9
5. Basic factors affecting penetration rate	12
6. Penetration rate and thrust per cutter	19
7. The possible influence of stress and strength ratios	23
8. Basic mechanism of chip formation with roller cutters	26
9. Tensile strength and its anisotropy	28
10. Penetration rate and fabric anisotropy	30
11. Penetration rate, joint spacing and joint character	33

PART 2

Q , Q_{TBM} AND ROCK MASS VARIABILITY

12. TBM performance and rock mass classification	39
13. TBM performance and Q -system parameters	45
14. TBM performance and the initial requirements for ' Q_{TBM} '	49
15. The law of decelerating advance rates	51
16. Utilisation and its decay with time	56
17. Unexpected events and their Q -values	57
18. Water inflows in TBM driven tunnels	63
19. Consequences of limited stand-up time in TBM tunnels	65
20. The relationship between PR, AR and Q_{TBM}	70

VI Contents

21. Rock mass variability and its effect on predicted performance	74
22. Fine-tuning Q_{TBM} for anisotropy	77
23. Cutter wear and its effect on PR and AR	81
24. Effect of porosity and quartz content on gradient m and PR	86
25. Tunnel size effects	88
26. Boring in exceptionally tough, high-stress conditions	91
27. Revisiting cutter force effects	95
28. Predicting advance rates in faulted rock	99

PART 3

LOGGING, TUNNEL SUPPORT, PROBING AND DESIGN VERIFICATION

29. TBM Q -logging and tunnel scale effects	107
30. Rock support methods commonly used in TBM tunnels	114
31. Some support design details for TBM tunnels	118
32. Probing and convergence measurement	123
33. Probing and seismic or sonic logging	129
34. Verifying TBM support classes with numerical models	133
35. Logging rock quality and support needs	138
36. TBM or drill-and-blast excavation?	142
37. Conclusions	147

APPENDIX

A1 Q -method of rock mass classification	151
A2 Q_{TBM} – the final version of Figure 44	154
A3 Input data summary for estimating PR and AR using Q_{TBM}	154
A4 Worked example	156
