List of contributors xiii
Introduction xvii
Jean Clobert, Jerry O. Wolff, James D. Nichols, Etienne Danchin, and André A. Dhondt

Part I. Measures of dispersal: genetic and demographic approaches

1. Methods for estimating dispersal probabilities and related parameters using marked animals 3
Robert E. Bennetts, James D. Nichols, Jean-Dominique Lebreton, Roger Pradel, James E. Hines, and Wiley M. Kitchens
2. Genetic approaches to the estimation of dispersal rates 18
François Rousset
3. How to measure dispersal: the genetic approach. The example of fire ants 29
Kenneth G. Ross
4. Dispersal in pikas (*Ochotona princeps*): combining genetic and demographic approaches to reveal spatial and temporal patterns 43
Mary M. Peacock and Chris Ray
5. Invasion fitness and adaptive dynamics in spatial population models 57
Régis Ferrière and Jean-François Le Galliard

Part II. Why disperse? Habitat variability, intraspecific interactions, multi-determinism, and interspecific interactions

6. On the relationship between the ideal free distribution and the evolution of dispersal 83
Robert D. Holt and Michael Barfield
7. The landscape context of dispersal 96
John A. Wiens
8. Dispersal, intraspecific competition, kin competition and kin facilitation: a review of the empirical evidence 110
Xavier Lambin, Jon Aars, and Stuart B. Piertney
9. Inbreeding, kinship, and the evolution of natal dispersal 123
Nicolas Perrin and Jérôme Goudet
10. Inbreeding versus outbreeding in captive and wild populations of naked mole-rats 143
M. Justin O'Riain and Stanton Braude

11. Multiple causes of the evolution of dispersal 155
Sylvain Gandon and Yannis Michalakis
12. Parasitism and predation as causes of dispersal 168
Wolfgang W. Weisser, Karen D. McCoy, and Thierry Boulinier
12a. Dispersal and parasitism 169
Thierry Boulinier, Karen D. McCoy, and Gabriele Sorci
12b. The effects of predation on dispersal 180
Wolfgang W. Weisser

Part III. Mechanisms of dispersal: genetically based dispersal, condition-dependent dispersal, and dispersal cues

13. The genetic basis of dispersal and migration, and its consequences for the evolution of correlated traits 191
Derek A. Roff and Daphne J. Fairbairn
14. Condition-dependent dispersal 203
Rolf A. Ims and Dag Ø. Hjermann
15. Proximate mechanisms of natal dispersal: the role of body condition and hormones 217
Alfred M. Dufty, Jr. and James R. Belthoff
16. Habitat selection by dispersers: integrating proximate and ultimate approaches 230
Judy A. Stamps
17. Public information and breeding habitat selection 243
Etienne Danchin, Dik Heg, and Blandine Doligez

Part IV. Dispersal from the individual to the ecosystem level: individuals, populations, species, and communities

18. Dispersal, individual phenotype, and phenotypic plasticity 261
Courtney J. Murren, Romain Julliard, Carl D. Schlichting, and Jean Clobert
19. Dispersal and the genetic properties of metapopulations 273
Michael C. Whitlock
20. Population dynamic consequences of dispersal in local populations and in metapopulations 283
Ilkka Hanski
21. Dispersal in antagonistic interactions 299
Minus van Baalen and Michael E. Hochberg
22. The properties of competitive communities with coupled local and regional dynamics 311
Nicolas Mouquet, Gerard S.E.E. Mulder, Vincent A.A. Jansen, and Michel Loreau

Part V. Perspectives

23. The evolutionary consequences of gene flow and local adaptation: future approaches 329
Nick H. Barton

24. Perspectives on the study of dispersal evolution 341
Ophélie Ronce, Isabelle Olivieri, Jean Clobert, and Etienne Danchin

25. Dispersal in theory and practice: consequences for conservation biology 358
David W. Macdonald and Dominic D.P. Johnson
