Preface xiii

part one

Introduction 1

Chapter 1

Overview of Genetics 1

1.1 A Look Ahead 2

1.2 The Language of Genetics 5

Levels of Genetics: From
DNA to Populations 5

A Case Study: Inherited
Sensitivity to Benzene
Exposure 7

Genes Do Not Usually
Function Alone 7

Geneticists Use Statistics to
Represent Risks 8

1.3 Applications of Genetics 9

Establishing Identity—From
Forensics to Rewriting
History 9

Health Care—Genetic
Diseases Differ from Other
Diseases 10

*In Their Own Words: Living
with Hemophilia 11*

Agriculture 12

*Bioethics: From Iceland to
GATTACA 13*

Chapter 2

Cells 17

2.1 The Components of Cells 18

Chemical Constituents of
Cells 18

Organelles 19

*Reading 2.1: Inherited
Illnesses at the Chemical
Level 20*

The Cell Membrane 25

The Cytoskeleton 26

*Reading 2.2: Inherited
Diseases Caused by Faulty
Ion Channels 27*

2.2 Cell Division and Death 29

The Cell Cycle 29

Apoptosis 32

2.3 Cell-Cell Interactions 34

Signal Transduction 34

Cell Adhesion 34

2.4 Stem Cells and Cell
Specialization 35

2.5 Viruses and Prions—Not
Cells, But Infectious 36

A Prion—One Protein that
Takes Two Forms 37

Chapter 3

Development 41

- 3.1 The Reproductive System 42
 - The Male 42
 - The Female 42
- 3.2 Meiosis 44
- 3.3 Gamete Maturation 49
 - Sperm Development 49
 - Oocyte Development 51
- 3.4 Prenatal Development 52
 - Fertilization 52
 - Early Events—Cleavage and Implantation 52
 - The Embryo Forms 54
 - Supportive Structures 54
 - On the Matter of Multiples 54
 - The Embryo Develops 55
 - The Fetus 56
- 3.5 Birth Defects 58
 - The Critical Period 58
 - Teratogens 59
- 3.6 Maturation and Aging 60
 - Adult-Onset Inherited Disorders 61
 - Accelerated Aging Disorders 61
 - Is Longevity Inherited? 61
 - Bioethics: Considering Cloning 62*

part two

Transmission Genetics 67

Chapter 4

Mendelian Inheritance 67

- 4.1 Following the Inheritance of One Gene—Segregation 68

Mendel's Laws Apply to Humans, Too 68
Mendel's Experiments 69
Chromosome Behavior in Meiosis Explains Mendel's Law of Segregation 69
Representing Mendel's Law of Segregation 70

4.2 Mendelian Inheritance in Humans 72

Modes of Inheritance 72

Reading 4.1: It's All in the Genes 74

On the Meaning of Dominance and Recessiveness 75

4.3 Following the Inheritance of Two Genes—Independent Assortment 76

4.4 Pedigree Analysis 78

Pedigrees Then and Now 78
Pedigrees Display Mendel's Laws 79

Chapter 5

Extensions and Exceptions to Mendel's Laws 85

5.1 When Gene Expression Appears to Alter Mendelian Ratios 86

Lethal Allele
Combinations 86
Multiple Alleles 86
Different Dominance Relationships 88
Epistasis—When One Gene Affects Expression of Another 89
Penetrance and Expressivity 90
Pleiotropy—One Gene, Many Effects 91

Phenocopies—When It's Not in the Genes 91

Genetic Heterogeneity—More than One Way to Inherit a Trait 92

5.2 Maternal Inheritance and Mitochondrial Genes 93

Mitochondrial Disorders 93
Heteroplasmy Complicates Mitochondrial Inheritance 94

5.3 Linkage 95

Linkage was Discovered in Pea Plants 95
Linkage Maps 96
Examples of Linked Genes in Humans 97
The Evolution of Gene Mapping 98

Chapter 6

Matters of Sex 103

6.1 Sexual Development 104

Sex Chromosomes 104
The Phenotype Forms 105
Gender Identity—Is Homosexuality Inherited? 106

6.2 Traits Inherited on Sex Chromosomes 108

X-Linked Recessive Inheritance 108

Reading 6.1: Of Preserved Eyeballs and Duplicated Genes—Color Blindness 110

X-Linked Dominant Inheritance 113

6.3 X Inactivation Evens Out the Sexes 114

6.4 Gender Effects on
Phenotype 116

- Sex-limited Traits 116
- Sex-influenced Traits 116
- Genomic Imprinting 116

Chapter 7

Multifactorial and Behavioral Traits 123

7.1 Genes and the Environment
Mold Many Traits 124

- Polygenic Traits Are
Continuously
Varying 124
- Fingerprint Patterns, Height,
and Eye Color 124
- A Closer Look at Skin
Color 126

7.2 Methods Used to Investigate
Multifactorial Traits 127

- Empiric Risk 127
- Heritability—The Genetic
Contribution to a
Multifactorial Trait 128
- Adopted Individuals 129
- Twins 129

7.3 Some Multifactorial
Traits 131

- Heart Health 131
- Body Weight 133
- Intelligence 135
- Sleep 136
- Schizophrenia 136
- Alcoholism 138
- Searching for Genes that
Affect Behavior 138

*Bioethics: Blaming
Genes 139*

part three

DNA and Chromosomes 143

Chapter 8

DNA Structure and Replication 143

8.1 Experiments Identify
and Describe the Genetic
Material 144

- DNA Is the Hereditary
Molecule 144
- DNA Is the Hereditary
Molecule—And Protein Is
Not 144
- Deciphering the Structure of
DNA 145

8.2 DNA Structure 147

8.3 DNA Replication—
Maintaining Genetic
Information 151

- Replication is
Semiconservative 151
- Steps and Participants in
DNA Replication 152

8.4 PCR—Directing DNA
Replication 154

*Reading 8.1: DNA Makes
History 156*

8.5 DNA Repair 157

- Three Types of DNA
Repair 157
- DNA Repair Disorders 158

Chapter 9

Gene Action 163

9.1 Control of Transcription Is
Complex 164

9.2 Transcription—The Link
Between Gene and Protein 164

- RNA Structure 164
- The Events of
Transcription 166
- Processing RNA 168

9.3 Translation—Expressing
Genetic Information 169

*Reading 9.1: RNA—
Possibly the Most Important
Molecule in Life 170*

- Deciphering the Genetic
Code 172
- Building a Protein 174
- Protein Folding 176

Chapter 10

Gene Mutation 181

10.1 Mutations Can Alter
Proteins—Three Examples 182

- The Beta Globin Gene 182
- Disorders of Orderly
Collagen 184
- A Mutation that Causes Early-
Onset Alzheimer Disease 185

10.2 Causes of Mutation 186

- Spontaneous Mutation 186
- Induced Mutations 188
- Natural Exposure to
Mutagens 189

10.3 Types of Mutations 190

- Point Mutations 190
- Deletions and Insertions Can
Cause Frameshifts 191
- Pseudogenes Are Remnants
of Genes Past 192
- Movable Genes 192
- Triplet Repeats and
Expanding Genes 192

*Reading 10.1: Fragile X
Syndrome—The First of the
Triplet Repeat Disorders 194*

10.4 The Importance of a Mutation's Position in the Gene 196

Globin Variants 196
Inherited Susceptibility to Prion Disorders 196

10.5 Factors that Lessen the Effects of Mutation 197

Chapter 11

Chromosomes 201

11.1 Portrait of a Chromosome 202

11.2 Visualizing Chromosomes 203

Obtaining Cells for Chromosome Study 203
Preparing Cells for Chromosome Observation 206

11.3 Abnormal Chromosome Number 209

Polyploidy 209
Aneuploidy 209

Reading 11.1: HACs—Human Artificial Chromosomes 210

11.4 Abnormal Chromosome Structure 215

In Their Own Words: A Personal Look at Klinefelter Syndrome 215

Deletions and Duplications 216
Translocations 217

In Their Own Words: Ashley's Message of Hope 217

Inversions 219
Isochromosomes and Ring Chromosomes 220

11.5 Uniparental Disomy—Two Genetic Contributions from One Parent 221

part four

Population Genetics 227

Chapter 12

When Allele Frequencies Stay Constant 227

12.1 The Importance of Knowing Allele Frequencies 228

12.2 When Allele Frequencies Stay Constant—Hardy-Weinberg Equilibrium 228

12.3 Practical Applications of Hardy-Weinberg Equilibrium 231

12.4 DNA Fingerprinting—A Practical Test of Hardy-Weinberg Assumptions 232

DNA Patterns Distinguish Individuals 232

Reading 12.1 DNA Fingerprinting Relies on Molecular Genetics and Population Genetics 234

Population Statistics Are Used to Interpret DNA Fingerprints 236

Chapter 13

Changing Allele Frequencies 241

13.1 Nonrandom Mating 242

13.2 Migration 243

Historical Clues 243
Geographical and Linguistic Clues 244

13.3 Genetic Drift 244

The Founder Effect 244
Population Bottlenecks 246

13.4 Mutation 247

13.5 Natural Selection 248

Reading 13.1 Antibiotic Resistance—Stemming a Biological Arms Race 248

Tuberculosis Ups and Downs—and Ups 249

Evolving HIV 250
Balanced Polymorphism 250

13.2 Dogs and Cats: Products of Artificial Selection 255

13.6 Gene Genealogy 256

PKU Revisited 256
CF Revisited 257

Chapter 14

Human Origins and Evolution 261

14.1 Human Origins 262

The Australopithecines 263
Homo 264
Modern Humans 265

14.2 Molecular Evolution 266

Comparing Genomes 266
Comparing Chromosomes 266
Comparing Protein Sequences 266
Comparing DNA Sequences 268

14.3 Molecular Clocks 270

Neanderthals Revisited 270
Choosing Clues 271

14.4 Eugenics 274

Eugenics Early in the Twentieth Century 274

- Eugenics in the 1990s 275
- Reading 14.1: Two Views of Neural Tube Defects* 276
- Bioethics: Beryllium Sensitivity Screening* 277

part five

Immunity and Cancer 281

Chapter 15

Genetics of Immunity 281

- 15.1 The Importance of Cell Surfaces 282
 - Blood Groups 282
 - The Human Leukocyte Antigens 284
- 15.2 The Immune System 285
 - Physical Barriers and the Innate Immune Response 285
 - The Acquired Immune Response 287
- 15.3 Abnormal Immunity 292
 - Inherited Immune Deficiencies 292
 - Acquired Immune Deficiency Syndrome 292
 - Autoimmunity 294
 - Allergies 294
- 15.4 Altering Immune Function 295
 - Vaccines 295
 - Immunotherapy 297
 - Transplantation 297
 - Bioethics: Pig Parts* 300

Chapter 16

The Genetics of Cancer 305

- 16.1 Cancer as a Genetic

- Disorder 306

- Cancer—A Loss of Cell Cycle Control 307
- Inherited versus Sporadic Cancer 308

- 16.2 Characteristics of Cancer Cells 308

- 16.3 Genes that Cause Cancer 310

- Oncogenes 311
- Tumor Suppressors 313

- Reading 16.1: Retinoblastoma—The Two-Hit Hypothesis* 314

- 16.4 A Series of Genetic Changes Causes Some Cancers 317

- A Rapidly Growing Brain Tumor 317
- Colon Cancer 318

- 16.5 Cancer Prevention and Treatment 319

- Diet-Cancer Associations 319
- Treating Cancer 320

- Reading 16.2: Cancer Death Rates in Different U.S. Locales* 320

part six

Genetic Technology 325

Chapter 17

Genetic Engineering 325

- 17.1 Recombinant DNA Technology 326
 - Constructing Recombinant DNA Molecules 327
 - Selecting Recombinant DNA Molecules 329

- Isolating the Gene of Interest 330
- Applications of Recombinant DNA Technology 331

- 17.2 Transgenic Organisms 332

- Delivering DNA 332
- Transgenic Pharming from Milk and Semen 333

- 17.3 Gene Targeting 336

- Gene-Targeted Mice as Models 337

- Bioethics: The Ethics of Using a Recombinant Drug: EPO* 338

- When Knockouts Are Normal 339

Chapter 18

Gene Therapy and Genetic Counseling 343

- 18.1 Gene Therapy Successes and Setbacks 344

- Adenosine Deaminase Deficiency—Early Success 344
- Ornithine Transcarbamylase Deficiency—A Setback 345

- 18.2 The Mechanics of Gene Therapy 346

- Treating the Phenotype 346
- Germline Versus Somatic Gene Therapy 347
- Sites of Somatic Gene Therapy 347

- In Their Own Words: The Good News Genetic Disease: Hereditary Hemochromatosis* 349

- Gene Delivery 350

18.3 A Closer Look: Treating Sickle Cell Disease 352

18.4 Genetic Screening and Genetic Counseling 354

Genetic Counselors Provide Diverse Services 354
Scene from a Sickle Cell Disease Clinic 355
Genetic Counseling Quandaries and Challenges 356
Perspective: A Slow Start, But Great Promise 356

Bioethics: Gene Therapy Fatalities 357

Chapter 19

Agricultural Biotechnology 361

19.1 Traditional Breeding Compared to Biotechnology 363

Similar Steps, Different Degree of Precision 363
Government Regulation of Crops 363
Biotechnology Provides Different Routes to Solving a Problem 363

19.2 Types of Plant Manipulations 365

Altering Plants at the Gene Level 365
Altering Plants at the Cellular Level 368

19.3 Release of Genetically Modified Organisms to the Environment 369

Microcosm Experiments 369
Field Tests 370
Bioremediation 370

19.4 Economic, Ecological, and Evolutionary Concerns 371

Bioethics: The Butterfly that Roared 373

Chapter 20

Reproductive Technologies 377

20.1 New Ways to Make Babies 378

Grandmother and Mother at the Same Time 378
Midlife Motherhood 378
A Five-Year Wait 378

20.2 Infertility 379

Male Infertility 379
Female Infertility 380

Reading 20.1: Scrutinizing Sperm 380

Infertility Tests 383

20.3 Assisted Reproductive Technologies 384

Donated Sperm—Artificial Insemination 384
A Donated Uterus—Surrogate Motherhood 384
In Vitro Fertilization 386
Gamete Intrafallopian Transfer 387
Oocyte Banking and Donation 387
Preimplantation Genetic Screening 388

Bioethics: Technology Too Soon? The Case of ICSI 390

Chapter 21

Genomics 393

21.1 Technology Fuels Genome Sequencing and Genomics 394

Reading 21.1: The Needle-in-a-Haystack Search for the Huntington Disease Gene 396

The Sanger Method of DNA Sequencing 398
Computers Coax Meaning from Genes 399

21.2 The History of the Human Genome Project 400

21.3 Using Human Genome Information 402

DNA Microarrays Will Revolutionize Medicine 402
Pharmacogenomics 402

21.4 Genome Information Answers and Raises Questions 403

The Definition of a Gene 403
Nonhuman Genome Projects 404

Epilogue: Genome Information Will Affect You 405

In Their Own Words: Genomics: The New Paradigm 406
