

Ove Sten-Knudsen

Biological Membranes

Theory of transport,
potentials and electric impulses

CAMBRIDGE

Contents

<i>Foreword</i>	<i>page</i> xix
<i>Preface</i>	xxi
1 Mathematical prelude	1
1.1 Introduction	1
1.2 Basic concepts of differential calculus	2
1.2.1 Limits	2
1.2.2 Functions	2
1.2.3 The derivative	3
1.2.3.1 A few derived functions	6
1.2.4 Approximate value of the increment Δy	6
1.2.5 Differential	8
1.2.5.1 The chain rule	9
1.2.5.2 The derivative of the inverse function	10
1.3 Basic concepts of integral calculus	11
1.3.1 Definite and indefinite integral	12
1.3.2 The fundamental law	14
1.3.3 Evaluation of a definite integral	15
1.3.4 The mean value theorem	17
1.4 The natural logarithm	18
1.4.1 Definition of the natural logarithm	18
1.4.2 Elementary properties of the logarithm	19
1.4.2.1 Logarithm of a product	20
1.4.2.2 Logarithm of a quotient	21
1.4.2.3 Logarithm of an exponential	22
1.5 The exponential function	22
1.5.1 Definition of the exponential function	22
1.5.2 Derivative and integral	25

1.6	Taylor's theorem	26
1.6.1	Taylor and Maclaurin series	26
1.6.1.1	Expansion of a polynomial	26
1.6.1.2	Expansion of an arbitrary function	27
1.6.1.3	The binomial series	28
1.6.2	Series of the logarithmic and exponential functions	30
1.6.2.1	The logarithm	30
1.6.2.2	The exponential function	31
1.6.3	Approximate expressions of functions	32
1.6.4	Evaluation of an undetermined expression $0/0$	33
1.7	Basic techniques of integration	34
1.7.1	The method of substitution	34
1.7.2	Partial integration	36
1.8	Functions of several variables	38
1.8.1	Geometrical representation	40
1.8.2	Partial derivatives	40
1.8.3	Total differential	43
1.8.4	The chain rule once more	45
1.9	Some ordinary differential equations	49
1.9.1	Four first-order differential equations	50
1.9.1.1	The equation $y' + \alpha y = 0$	51
1.9.1.2	The equation $y' + \alpha y = K$	52
1.9.1.3	The equation $y' + \alpha y = Q(x)$	53
1.9.1.4	The equation $y' + P(x)y = Q(x)$	53
1.9.2	Two second-order differential equations	55
1.9.2.1	The equation $y'' - \kappa^2 y = 0$	55
1.9.2.2	The equation $y'' - \kappa^2 y = 0$	56
1.10	A note on partial differential equations	57
2	Migration and diffusion	62
2.1	Introduction	62
2.2	Flux	65
2.3	Types of passive transport	65
2.4	Migration	66
2.4.1	Friction coefficient and mobility	66
2.4.2	Migration flux	68
2.5	Diffusion	70
2.5.1	Phenomenological description	70
2.5.2	Diffusion flux (Fick's law)	73
2.5.2.1	The diffusion coefficient	74
2.5.2.2	A simple application of Fick's law	75

2.5.3	The diffusion equation	76
2.5.3.1	Diffusion with mass conservation	77
2.5.3.2	Diffusion with concurrent mass production	79
2.5.3.3	Classification of diffusion processes	79
2.5.4	Stationary diffusion processes	80
2.5.4.1	One-dimensional diffusion	81
(i)	Diffusion through a plate	81
(ii)	Diffusion through two adjoining, different media	84
(iii)	Unstirred layers	87
(iv)	Plate covered on one side by a membrane of permeability P	89
(v)	Diffusion with mass consumption	91
2.5.4.2	Diffusion in a cylinder with radial symmetry	99
(i)	The diffusion equation	100
(ii)	Diffusion through a cylindrical shell	103
(iii)	Diffusion in a cylinder with mass consumption	105
(iv)	Diffusion from a cylinder into the surrounding medium with mass consumption (Krogh's cylinder)	108
2.5.4.3	Diffusion with radial symmetry in a sphere	111
(i)	The diffusion equation	111
(ii)	Diffusion through a spherical shell	114
(iii)	Sphere covered by a thin membrane, mass consumption in the interior	115
2.5.5	Time-dependent diffusion processes	117
2.5.5.1	An extended initial distribution (Boltzmann's trick)	117
2.5.5.2	Diffusion from a region with constant concentration	123
2.5.5.3	Duhamel's integral	124
2.5.5.4	An instantaneous surface distribution	127
2.5.5.5	Green's function	130
(i)	A varying initial distribution in space	130
(ii)	Initial uniform distribution in the infinite half-space	133
(iii)	The effect of an impermeable barrier	133
(iv)	The effect of a matter-absorbing wall	135
(v)	A variable flux into one half-space	137
2.5.6	Molecular description of diffusion	139
2.5.6.1	Brownian motion	140

2.5.6.2	Diffusion from a statistical point of view	143
2.5.6.3	Random walk	145
(i)	The distribution function	146
(ii)	The mean displacement	153
(iii)	The mean displacement in one direction	154
(iv)	The root mean square displacement (the Einstein-Smoluchowski relation)	154
(α)	Two-dimensional random walk	157
(β)	Three-dimensional random walk	159
2.5.6.4	Random walk and Fick's law	161
(i)	Einstein's simplified treatment	161
(ii)	A more exact derivation of Fick's law	164
2.5.6.5	Random walk and the diffusion equation	169
2.5.6.6	Random walk over an energy barrier	175
2.6	Diffusion and migration superimposed	180
2.6.1	The Smoluchowski equation	180
2.6.1.1	An instantaneous plane source in infinite space	182
(i)	The concentration change with time at a fixed point in space	184
(ii)	Driving the swarm towards a reflecting barrier: a case of sedimentation	184
2.6.2	"Random walk" considerations	190
2.6.2.1	The flux equation	190
2.6.2.2	Random walk and the diffusion-migration equation	193
2.6.2.3	Migration over an energy barrier	195
2.6.3	Kramers' equation	199
2.6.4	Diffusion coefficient and mobility	201
2.6.4.1	The Einstein relation	202
2.6.4.2	Einstein-Stokes relation	203
2.6.4.3	The "driving force" behind the diffusion process	206
2.7	Diffusion through membranes	208
2.7.1	Permeability coefficient	209
2.7.2	Kinetics of exchange	210
2.7.2.1	Outer concentration kept at zero	211
2.7.2.2	Outer concentration kept constant: cell concentration initially zero	212
2.7.2.3	Both phases comparable in size	213
2.7.3	Compartment analysis	218

2.7.3.1	Transport with passive membrane permeabilities	218
(i)	A step change in outer concentration	219
(ii)	Outer concentration grows asymptotically	220
2.7.3.2	One-way transport	221
(i)	Unidirectional flux	221
(ii)	Unidirectional transfer	222
(iii)	Passive influx and unidirected efflux	224
2.7.4	Stationary diffusion with superimposed migration	224
2.7.4.1	Determination of the flux	225
2.7.4.2	Unidirectional fluxes and flux ratio	228
2.7.4.3	Concentration profile	229
2.8	Convective and osmotic water movement through membranes	230
2.8.1	Convective water movement	231
2.8.2	Osmotic water movement	233
2.8.2.1	Osmotic pressure	233
2.8.2.2	Colligative properties	235
2.8.2.3	The underlying mechanism of osmotic water movement	236
2.8.2.4	The equation for the osmotic pressure	237
2.8.2.5	Osmotic coefficient ν	242
2.8.2.6	A simple dynamic model of osmotic equilibrium	243
2.8.3	The freezing-point depression	250
2.8.3.1	The freezing-point depression and osmotic pressure	251
2.8.3.2	Osmolarity	252
2.8.3.3	Reflection coefficient	254
2.8.4	Water movement across cell membranes	255
3	Membrane potentials	259
3.1	Introduction	259
3.2	Electric field and potential	260
3.3	Transport of ions in solutions	265
3.3.1	Migration	266
3.3.2	Electrodiffusion (Nernst-Planck equations)	271
3.3.2.1	Equivalent forms	272
3.3.2.2	Poisson's equation	274
3.3.2.3	Electroneutrality	276
3.3.2.4	The constant field	277
3.4	The equilibrium potential	277

3.4.1	A qualitative description of the origin of the membrane potential across an ion-selective permeable membrane	278
3.4.2	The Nernst equation	281
3.4.2.1	The charge density of the excess charges on the two membrane sides	283
3.4.2.2	Derivation of Nernst's equation	283
3.4.3	Establishing the electric contact to the electrolyte solution: electrodes	286
3.4.3.1	The galvanic cell	286
(i)	Half-cells	288
(ii)	Electrode potentials	289
(iii)	Standard electrode potentials	294
(iv)	Non-equivalent electrode current	295
(v)	Reversibility	298
3.4.3.2	Two recording electrodes	299
(i)	The silver-silver chloride electrode	299
(ii)	The calomel electrode	301
3.4.4	The equivalent electric circuit for the ionic-selective membrane	302
3.4.4.1	Measurement of the current-voltage characteristic	302
3.4.4.2	Membrane current and membrane conductance	304
3.4.4.3	The equivalent circuit diagram	308
3.4.4.4	Membrane conductance and membrane permeability	311
3.5	The Donnan potential	313
3.5.1	Qualitative description of the Donnan distribution	314
3.5.2	Quantitative treatment of the Donnan system	316
3.5.2.1	Low polyelectrolyte concentration	320
3.5.2.2	High polyelectrolyte concentration	321
3.5.3	Concentration and potential profiles	322
3.5.3.1	The Poisson-Boltzmann equations	324
3.5.3.2	Solving the Poisson-Boltzmann equations	326
(i)	The solution for $x \geq 0$	326
(ii)	The solution for $x \leq 0$	329
(iii)	Binding the two solutions together	331
3.5.3.3	A numerical example	333
3.5.3.4	The total space charge	335
3.6	Diffusion potentials	336

3.6.1	Qualitative description of the diffusion potential	336
3.6.1.1	Collapse of the Donnan regime	336
3.6.1.2	A binary electrolyte	337
3.6.1.3	The salt bridge to eliminate the diffusion potential	338
3.6.2	Calculation of the diffusion potential for a binary monovalent electrolyte	339
3.6.3	Diffusion potential between solutions of different composition	341
3.6.3.1	The Planck regime	342
(i)	Planck's general relations	343
(ii)	The electrical equivalent for the Planck regime	345
(iii)	Planck's expression for the diffusion potential	348
3.6.3.2	The Henderson regime	348
3.6.3.3	The salt bridge once again	351
3.7	Electrodiffusion through membranes	353
3.7.1	A single salt	353
3.7.1.1	The diffusion potential	354
3.7.1.2	The membrane resistance	356
3.7.1.3	The potential profile	357
3.7.1.4	The equivalent electric circuit	357
3.7.1.5	Electroneutrality	359
3.7.2	Ion-selective membranes	360
3.7.3	The Goldman regime	363
3.7.3.1	Derivation of the Goldman equation	365
3.7.3.2	Concentration profiles	370
3.7.3.3	Membrane conductance and membrane permeability	372
(i)	Concentrations equal on both sides	373
(ii)	Different surrounding concentrations: $V \approx V_j^{(eq)}$	374
(iii)	$V \neq V_j^{(eq)}$	376
3.7.3.4	Total current and membrane potential	377
3.7.4	The mosaic membrane (the Millman equation)	379
3.8	The membrane potential of a biological cell	384
3.8.1	Measuring the membrane potential	385
3.8.2	The origin of the membrane potential	388
3.8.3	Membrane potential and ionic concentrations in the extracellular medium	391
3.8.3.1	Sudden changes of both $V_K^{(eq)}$ and $V_{Cl}^{(eq)}$	392
3.8.3.2	Membrane potential with varying K^+ in extracellular fluid in the absence of Cl^-	396

3.8.3.3	Membrane potential with varying Na^+ in the extracellular fluid	398
3.8.4	Membrane potential and active Na^+/K^+ transport	399
3.8.4.1	Absolute stationarity	400
3.8.4.2	Total current is zero	402
3.8.4.3	The mosaic membrane	403
3.9	Flux ratio analysis	403
3.9.1	Flux ratio and electrodiffusion	406
3.9.2	Flux ratio and convective diffusion	409
4	The nerve impulse	411
4.1	Introduction	411
4.1.1	Excitability	411
4.1.2	The communication system	412
4.2	Historical background	413
4.3	The nerve signal recorded with external electrodes	417
4.3.1	The nerve signal	417
4.3.1.1	The diphasic action potential	419
4.3.1.2	The monophasic action potential	420
4.3.2	Some elementary properties of the nerve signal	422
4.3.2.1	"All or nothing" law	423
4.3.2.2	Subliminal stimuli	424
4.3.2.3	The refractory period	426
4.4	Results from the giant axon of the squid	427
4.4.1	Recording the resting membrane potential and action potential	427
4.4.2	The resting membrane potential	431
4.4.2.1	Membrane potential and the Goldman regime	432
4.4.2.2	Mobility of K^+ ions in axoplasm	433
4.4.3	The action potential	437
4.4.3.1	Stimulation with an intracellular microelectrode	437
(i)	The internal electrode is a cathode	437
(ii)	The internal electrode is an anode	438
4.4.3.2	Conductance changes attending the action potential	441
4.4.3.3	The effect of extracellular sodium concentration on the action potential	442
4.4.3.4	Perfused axons	443
4.4.4	The experimental substantiation of the sodium hypothesis	447
4.4.4.1	Net movement of radioactive sodium and potassium during electric activity	447

4.4.4.2	The temporal resolution of the separate ionic current: voltage clamp technique	449
(i)	The control system	450
(ii)	Identification of the early inward-directed current	454
(iii)	Identification of the outward-directed current	459
4.4.4.3	Calculation of the partial membrane conductances for sodium and potassium	461
(i)	The time course of the changes in sodium and potassium conductance during a voltage clamp	461
(ii)	The dependence of the conductance changes on the displacement of the membrane potential	463
(iii)	The inactivation process	464
4.4.4.4	The membrane action potential: qualitative synthesis of the voltage clamp experiments	470
(i)	The action potential	472
(ii)	Threshold phenomena	473
4.4.4.5	Investigations on single Na^+ channels	474
4.4.4.6	Selective effects on the Na^+ and K^+ channels	479
(i)	Blocking the Na^+ channel	480
(ii)	Blocking the K^+ channel	481
(iii)	Destruction of Na^+ inactivation	483
4.4.5	The propagated action potential	484
4.4.5.1	The local current loops	484
4.4.5.2	The nerve as an electric cable	486
(i)	Derivation of the cable equation	486
(ii)	The stationary state	491
(iii)	Time-dependent solutions	492
4.4.5.3	Reconstruction of the action potential	500
(i)	The Hodgkin-Huxley equations	501
(ii)	The propagated action potential	503
4.4.5.4	Nerve impulse recorded with external electrodes	506
4.4.5.5	The conduction velocity	510
4.5	Myelinated nerves	511
4.6	Repetitive impulse transmission	516
4.7	The Hodgkin-Huxley equations	520
4.7.1	Empirical equations for the sodium and potassium conductances	520
4.7.2	Voltage clamp	522
4.7.3	The membrane action potential	528
4.7.4	The propagated action potential	532

5	Impulse transmission across cell boundaries	537
5.1	General characteristics of impulse transmission	537
5.1.1	The synapse	537
5.1.2	Mechanisms of transmission	539
5.2	Neuromuscular transmission: impulse transmission from nerve to muscle	542
5.2.1	Structure of the end-plate	542
5.2.2	The course of the electrical transmission	544
5.2.2.1	The synaptic delay	546
5.2.2.2	The postsynaptic potential	546
5.2.3	The end-plate potential	548
5.2.3.1	End-plate potential and acetylcholine	549
5.2.3.2	The time course of the end-plate potential	553
5.2.3.3	Cholinesterase and anti-cholinesterase	554
5.2.3.4	Ionic movements associated with the course of the end-plate potential	556
5.2.4	Quantal release of acetylcholine	565
5.2.4.1	Miniature end-plate potentials	565
5.2.4.2	End-plate potential and miniature potentials	571
5.2.4.3	The vesicle hypothesis	582
Appendix A	About the functions $\text{Erf}\{x\}$, $\text{Erfc}\{x\}$ and calculation of the integral $\int_{-\infty}^{\infty} e^{-x^2} dx$	584
Appendix B	Solving the integral $\int_0^t \frac{1}{\sqrt{u}} e^{-x^2/4Du} du$	588
Appendix C	Evaluation of $\frac{N!}{[(N+m)/2]! [(N-m)/2]!} \left(\frac{1}{2}\right)^N = \sqrt{\frac{2}{\pi N}} e^{-m^2/2N}$	590
Appendix D	To demonstrate that the mean value $\langle \xi^2 \rangle$ of the displacements squared is proportional to the number N of the displacements	593
Appendix E	Evaluation of the integral Eq. (2.5.191)	595
Appendix F	Evaluation of the integral $\int_{-\infty}^{\infty} e^{mX - (X+x_0)^2/B} dX$	599
Appendix G	Example of the application of the theory of Brownian motion	601
Appendix H	A note on the physical meaning of the pressure gradient	604
Appendix I	About hyperbolic functions	606
Appendix J	Evaluation of an integral of Duhamel's type	612
Appendix K	Calculation of the potential profiles resulting from injection of a constant current I_0 in the axon	616
Appendix L	A note on the method of images	618
Appendix M	Cable analysis of the end-plate potential (Fatt & Katz, 1951)	623
