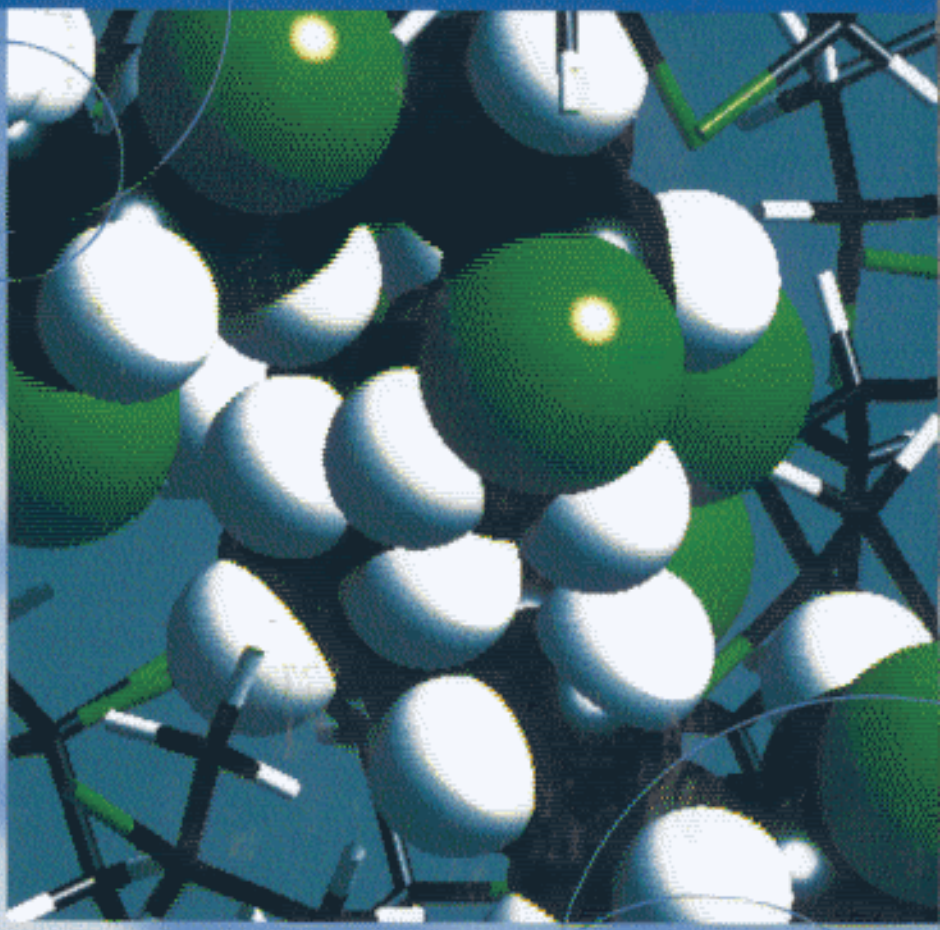
An Introduction to Polymer Physics



David I. Bower

CAMBRIDGE

Contents

Preface xii
Acknowledgements xv

1 Introduction 1
1.1 Polymers and the scope of the book 1
1.2 A brief history of the development of synthetic polymers 2
1.3 The chemical nature of polymers 8
1.3.1 Introduction 8
1.3.2 The classification of polymers 9
1.3.3 'Classical' polymerisation processes 12
1.3.4 Newer polymers and polymerisation processes 17
1.4 Properties and applications 18
1.5 Polymer processing 21
1.5.1 Introduction 21
1.5.2 Additives and composites 22
1.5.3 Processing methods 23
1.6 Further reading 25
1.6.1 Some general polymer texts 25
1.6.2 Further reading specifically for chapter 1 26

2 Some physical techniques for studying polymers 27
2.1 Introduction 27
2.2 Differential scanning calorimetry (DSC) and differential thermal analysis (DTA) 27
2.3 Density measurement 31
2.4 Light scattering 32
2.5 X-ray scattering 33
2.5.1 Wide-angle scattering (WAXS) 33
2.5.2 Small-angle scattering (SAXS) 38
2.6 Infrared and Raman spectroscopy 38
2.6.1 The principles of infrared and Raman spectroscopy 38
2.6.2 Spectrometers for infrared and Raman spectroscopy 41
2.6.3 The infrared and Raman spectra of polymers 42
2.6.4 Quantitative infrared spectroscopy – the Lambert–Beer law 43

2.7 Nuclear magnetic resonance spectroscopy (NMR) 44
2.7.1 Introduction 44
2.7.2 NMR spectrometers and experiments 46
2.7.3 Chemical shifts and spin–spin interactions 49
2.7.4 Magic-angle spinning, dipolar decoupling and cross polarisation 50
2.7.5 Spin diffusion 52
2.7.6 Multi-dimensional NMR 52
2.7.7 Quadrupolar coupling and ^2H spectra 54
2.8 Optical and electron microscopy 55
2.8.1 Optical microscopy 55
2.8.2 Electron microscopy 58
2.9 Further reading 62

3 Molecular sizes and shapes and ordered structures **63**
3.1 Introduction 63
3.2 Distributions of molar mass and their determination 63
3.2.1 Number-average and weight-average molar masses 63
3.2.2 Determination of molar masses and distributions 65
3.3 The shapes of polymer molecules 66
3.3.1 Bonding and the shapes of molecules 66
3.3.2 Conformations and chain statistics 72
3.3.3 The single freely jointed chain 72
3.3.4 More realistic chains – the excluded-volume effect 76
3.3.5 Chain flexibility and the persistence length 80
3.4 Evidence for ordered structures in solid polymers 81
3.4.1 Wide-angle X-ray scattering – WAXS 81
3.4.2 Small-angle X-ray scattering – SAXS 82
3.4.3 Light scattering 83
3.4.4 Optical microscopy 84
3.5 Further reading 85
3.6 Problems 85

4 Regular chains and crystallinity **87**
4.1 Regular and irregular chains 87
4.1.1 Introduction 87
4.1.2 Polymers with 'automatic' regularity 89
4.1.3 Vinyl polymers and tacticity 90
4.1.4 Polydienes 96
4.1.5 Helical molecules 96
4.2 The determination of crystal structures by X-ray diffraction 98

4.2.1 Introduction 98
4.2.2 Fibre patterns and the unit cell 99
4.2.3 Actual chain conformations and crystal structures 106
4.3 Information about crystal structures from other methods 109
4.4 Crystal structures of some common polymers 111
4.4.1 Polyethylene 111
4.4.2 Syndiotactic poly(vinyl chloride) (PVC) 111
4.4.3 Poly(ethylene terephthalate) (PET) 111
4.4.4 The nylons (polyamides) 113
4.5 Further reading 115
4.6 Problems 115

5 Morphology and motion **117**
5.1 Introduction 117
5.2 The degree of crystallinity 118
5.2.1 Introduction 118
5.2.2 Experimental determination of crystallinity 119
5.3 Crystallites 120
5.3.1 The fringed-micelle model 121
5.3.2 Chain-folded crystallites 122
5.3.3 Extended-chain crystallites 127
5.4 Non-crystalline regions and polymer macro-conformations 127
5.4.1 Non-crystalline regions 127
5.4.2 Polymer macro-conformations 129
5.4.3 Lamellar stacks 129
5.5 Spherulites and other polycrystalline structures 133
5.5.1 Optical microscopy of spherulites 133
5.5.2 Light scattering by spherulites 135
5.5.3 Other methods for observing spherulites 136
5.5.4 Axialites and shish-kebabs 136
5.6 Crystallisation and melting 137
5.6.1 The melting temperature 138
5.6.2 The rate of crystallisation 139
5.6.3 Theories of chain folding and lamellar thickness 141
5.7 Molecular motion 145
5.7.1 Introduction 145
5.7.2 NMR, mechanical and electrical relaxation 146
5.7.3 The site-model theory 148
5.7.4 Three NMR studies of relaxations with widely different values of τ_c 150
5.7.5 Further NMR evidence for various motions in polymers 156

5.8 Further reading 160
5.9 Problems 160

6 Mechanical properties I – time-independent elasticity 162
6.1 Introduction to the mechanical properties of polymers 162
6.2 Elastic properties of isotropic polymers at small strains 164
6.2.1 The elastic constants of isotropic media at small strains 164
6.2.2 The small-strain properties of isotropic polymers 166
6.3 The phenomenology of rubber elasticity 169
6.3.1 Introduction 169
6.3.2 The transition to large-strain elasticity 170
6.3.3 Strain–energy functions 173
6.3.4 The neo-Hookean solid 174
6.4 The statistical theory of rubber elasticity 176
6.4.1 Introduction 176
6.4.2 The fundamental mechanism of rubber elasticity 178
6.4.3 The thermodynamics of rubber elasticity 179
6.4.4 Development of the statistical theory 181
6.5 Modifications of the simple molecular and phenomenological theories 184
6.6 Further reading 184
6.7 Problems 185

7 Mechanical properties II – linear viscoelasticity 187
7.1 Introduction and definitions 187
7.1.1 Introduction 187
7.1.2 Creep 188
7.1.3 Stress-relaxation 190
7.1.4 The Boltzmann superposition principle (BSP) 191
7.2 Mechanical models 193
7.2.1 Introduction 193
7.2.2 The Maxwell model 194
7.2.3 The Kelvin or Voigt model 195
7.2.4 The standard linear solid 196
7.2.5 Real materials – relaxation-time and retardation-time spectra 197
7.3 Experimental methods for studying viscoelastic behaviour 198
7.3.1 Transient measurements 198
7.3.2 Dynamic measurements – the complex modulus and compliance 199
7.3.3 Dynamic measurements; examples 201
7.4 Time–temperature equivalence and superposition 204

7.5 The glass transition in amorphous polymers 206
7.5.1 The determination of the glass-transition temperature 206
7.5.2 The temperature dependence of the shift factor: the VFT and WLF equations 208
7.5.3 Theories of the glass transition 209
7.5.4 Factors that affect the value of T_g 211
7.6 Relaxations for amorphous and crystalline polymers 212
7.6.1 Introduction 212
7.6.2 Amorphous polymers 213
7.6.3 Crystalline polymers 213
7.6.4 Final remarks 217
7.7 Further reading 217
7.8 Problems 217

8 Yield and fracture of polymers **220**
8.1 Introduction 220
8.2 Yield 223
8.2.1 Introduction 223
8.2.2 The mechanism of yielding – cold drawing and the Considère construction 223
8.2.3 Yield criteria 226
8.2.4 The pressure dependence of yield 231
8.2.5 Temperature and strain-rate dependences of yield 232
8.3 Fracture 234
8.3.1 Introduction 234
8.3.2 Theories of fracture; toughness parameters 235
8.3.3 Experimental determination of fracture toughness 239
8.3.4 Crazing 240
8.3.5 Impact testing of polymers 243
8.4 Further reading 246
8.5 Problems 246

9 Electrical and optical properties **248**
9.1 Introduction 248
9.2 Electrical polarisation 249
9.2.1 The dielectric constant and the refractive index 249
9.2.2 Molecular polarisability and the low-frequency dielectric constant 252
9.2.3 Bond polarisabilities and group dipole moments 254
9.2.4 Dielectric relaxation 256
9.2.5 The dielectric constants and relaxations of polymers 260
9.3 Conducting polymers 267

9.3.1 Introduction 267
9.3.2 Ionic conduction 268
9.3.3 Electrical conduction in metals and semiconductors 272
9.3.4 Electronic conduction in polymers 275
9.4 Optical properties of polymers 283
9.4.1 Introduction 283
9.4.2 Transparency and colourlessness 284
9.4.3 The refractive index 285
9.5 Further reading 288
9.6 Problems 288

10 Oriented polymers I – production and characterisation 290
10.1 Introduction – the meaning and importance of orientation 290
10.2 The production of orientation in synthetic polymers 291
10.2.1 Undesirable or incidental orientation 292
10.2.2 Deliberate orientation by processing in the solid state 292
10.2.3 Deliberate orientation by processing in the fluid state 296
10.2.4 Cold drawing and the natural draw ratio 298
10.3 The mathematical description of molecular orientation 298
10.4 Experimental methods for investigating the degree of orientation 301
10.4.1 Measurement of optical refractive indices or birefringence 301
10.4.2 Measurement of infrared dichroism 305
10.4.3 Polarised fluorescence 310
10.4.4 Raman spectroscopy 312
10.4.5 Wide-angle X-ray scattering 312
10.5 The combination of methods for two-phase systems 314
10.6 Methods of representing types of orientation 315
10.6.1 Triangle diagrams 315
10.6.2 Pole figures 316
10.6.3 Limitations of the representations 317
10.7 Further reading 318
10.8 Problems 318

11 Oriented polymers II – models and properties 321
11.1 Introduction 321
11.2 Models for molecular orientation 321
11.2.1 The affine rubber deformation scheme 322
11.2.2 The aggregate or pseudo-affine deformation scheme 326
11.3 Comparison between theory and experiment 327
11.3.1 Introduction 327

11.3.2 The affine rubber model and 'frozen-in' orientation 328
11.3.3 The affine rubber model and the stress-optical coefficient 329
11.3.4 The pseudo-affine aggregate model 332
11.4 Comparison between predicted and observed elastic properties 332
11.4.1 Introduction 332
11.4.2 The elastic constants and the Ward aggregate model 333
11.5 Takayanagi composite models 335
11.6 Highly oriented polymers and ultimate moduli 338
11.6.1 Ultimate moduli 338
11.6.2 Models for highly oriented polyethylene 340
11.7 Further reading 341
11.8 Problems 341

12 Polymer blends, copolymers and liquid-crystal polymers 343
12.1 Introduction 343
12.2 Polymer blends 344
12.2.1 Introduction 344
12.2.2 Conditions for polymer–polymer miscibility 344
12.2.3 Experimental detection of miscibility 350
12.2.4 Compatibilisation and examples of polymer blends 354
12.2.5 Morphology 356
12.2.6 Properties and applications 358
12.3 Copolymers 360
12.3.1 Introduction and nomenclature 360
12.3.2 Linear copolymers: segregation and melt morphology 362
12.3.3 Copolymers combining elastomeric and rigid components 367
12.3.4 Semicrystalline block copolymers 368
12.4 Liquid-crystal polymers 370
12.4.1 Introduction 370
12.4.2 Types of mesophases for small molecules 371
12.4.3 Types of liquid-crystal polymers 373
12.4.4 The theory of liquid-crystal alignment 375
12.4.5 The processing of liquid-crystal polymers 382
12.4.6 The physical structure of solids from liquid-crystal polymers 383
12.4.7 The properties and applications of liquid-crystal polymers 386
12.5 Further reading 391
12.6 Problems 391

Appendix: Cartesian tensors 393
Solutions to problems 397
Index 425
