

MCAD/MCSD

Self-Paced Training Kit

- Based on final exam content
- Enhanced practice tests
- Side-by-side code examples

DEVELOPING

XML WEB SERVICES AND SERVER COMPONENTS

WITH MICROSOFT®

VISUAL BASIC® .NET

AND MICROSOFT

VISUAL C#™ .NET

Exams
70-310 and 70-320

Contents

About This Book	xiii
Intended Audience	xiii
Prerequisites	xiii
Reference Materials	xiv
About the CD-ROM	xiv
About the DVD	xiv
Features of This Book	xv
Notes	xv
Notational Conventions	xv
Chapter and Appendix Overview	xvi
Finding the Best Starting Point for You	xviii
Where to Find Specific Skills in This Book	xix
Getting Started	xxii
Hardware Requirements	xxii
Software Requirements	xxiii
Setup Instructions	xxiii
The Microsoft Certified Professional Program	xxiv
Microsoft Certification Benefits	xxv
Requirements for Becoming a Microsoft Certified Professional	xxvii
Technical Training for Computer Professionals	xxviii
Technical Support	xxix
 Chapter 1: Understanding the .NET Framework	1
About This Chapter	1
Before You Begin	2
Lesson 1: Overview of the .NET Framework	3
Understanding .NET	3
Understanding the .NET Framework and Its Role in .NET	4
Understanding the .NET Framework Architecture	6
Lesson 2: Understanding the Common Language Runtime	8
Common Language Runtime Architecture	8
Common Language Runtime Components	9

Lesson 3: Understanding the Managed Execution Process	12
Defining the Managed Execution Process	12
Automatic Memory Management	12
Lesson 4: Understanding Assemblies and the Global Assembly Cache	21
Overview of Assemblies	21
Understanding Namespaces	22
Types of Assemblies	22
Assembly Identity	24
Assembly Deployment	25
Lesson 5: Understanding Configuration and Security	27
Application Configuration	27
Lesson 6: Understanding Application Domains and Run-Time Hosts	31
Understanding Processes and Application Domains	31
Understanding Run-Time Hosts	32
Lesson 7: Introducing the .NET Framework Tools	33
Assembly Linker	33
Using the Ilasm.exe Tool	34
Using the Ildasm.exe Tool	35
Using the Caspol.exe Tool	36
Mscorcfg.msc	37
Summary	39
Lab: Creating Assemblies and Examining MSIL	40
Exercise 1: Creating a Single-File Assembly	40
Exercise 2: Using Ildasm to Examine the MSIL Code	41
Exercise 3: Creating a Multiple-File Assembly	43
Review	46
Chapter 2: Creating and Managing Windows Services	47
About This Chapter	47
Before You Begin	47
Lesson 1: Understanding Windows Services	48
Overview of Windows Services	48
Differences Between Service Applications and Other Visual Studio .NET Applications	50
Programming Model of Windows Service Applications	50
Lesson 2: Creating Windows Services	54
Creating a Windows Service Application	54

Changing the Default Properties of a Windows Service Application	56
Adding Functionality to a Service Application	58
Lesson 3: Handling Events and Logging Information from a Windows Service Application	64
Handling Events of a Windows Service	64
Logging Information in System Event Logs	65
Creating Custom Event Logs	67
Using Performance Counters	69
Lesson 4: Adding Installers, Specifying Security Context, and Installing and Uninstalling a Windows Service	74
Understanding the Role of Installers	74
Adding Installers	75
Specifying Security Context for a Service Application	81
Installing and Uninstalling a Windows Service	81
Lesson 5: Managing Windows Services	84
Using the Service Control Manager	84
Using the ServiceController Class	88
Lesson 6: Configuring and Debugging Windows Services	96
Configuring a Windows Service	96
Debugging a Windows Service	98
Summary	101
Lab: Creating and Managing Windows Services	102
Exercise 1: Creating and Installing a Windows Service	102
Exercise 2: Creating a Client Application	107
Exercise 3: Managing Windows Services	112
Review	122
 Chapter 3: Creating and Consuming Serviced Components	 125
About This Chapter	125
Before You Begin	126
Lesson 1: Overview of COM+ Programming	127
Evolution of COM+	127
Component Services of COM+	130
Lesson 2: Understanding, Creating, and Registering Serviced Components . .	134
Developing a Serviced Component	134
Lesson 3: Utilizing COM+ Services	147
Enabling COM+ Transactions	147

Enabling JIT Activation	150
Using the Loosely Coupled Events Service	150
Using the Object Pooling Service	153
Using the Queued Components Service	153
Using Object Construction	154
Lesson 4: Managing Serviced Components	
Using the Component Services Tool	155
Component Services Tool	155
Configuring Activation Using the Component Services Tool	159
Configuring Transactions Using the Component Services Tool	161
Configuring Security Using the Component Services Tool	163
Lesson 5: Implementing Security for Serviced Components	169
Implementation of Security in Serviced Components	169
Role-Based Security	169
Component Level Security Checks in Applications	171
Implementing Component Security Programmatically	172
Security Call Context Information	172
Interoperability Between COM+ Security Services and the .NET Framework	175
Summary	176
Lab: Creating, Configuring, and Managing Serviced Components	177
Exercise 1: Creating a Serviced Component	177
Exercise 2: Creating the Client Application	184
Exercise 3: Creating the Accounts Table	190
Exercise 4: Configuring Serviced Components Using the Component Services Tool	191
Review	193
Chapter 4: Creating and Consuming .NET Remoting Objects	197
About This Chapter	197
Before You Begin	198
Lesson 1: Understanding .NET Remoting	199
Overview of .NET Remoting	199
Accessing Objects Across Remoting Boundaries	200
The .NET Remoting Architecture	201
Remotable and Nonremotable Objects	202
Lesson 2: Implementing Server-Activated and Client-Activated Objects	204

Understanding Remote Object Activation	204
Using Lifetime Leases.....	210
Scope of Publication	212
Lesson 3: Transporting Messages Across	
Application Domains Using Channels	213
Understanding Channels	213
Selecting Channels for Remoting	215
HTTP Channels.....	216
TCP Channels	219
Sinks and Sink Chains.....	222
Lesson 4: Implementing Events and Delegates	224
Understanding Events and Delegates	224
Implementing Events and Delegates in Remoting Applications.....	225
Lesson 5: Implementing Asynchronous Methods	229
Asynchronous Methods.....	229
Implementing Asynchronous Methods in Remoting Applications.....	230
Lesson 6: Configuring and Securing .NET Remoting Objects	232
Remote Object Configuration	232
Securing .NET Remoting Objects.....	234
Summary.....	236
Lab: Creating and Consuming .NET Remoting Objects	237
Exercise 1: Create the ChatCoordinator.dll Library	237
Exercise 2: Create a Configuration File for Configuring the ChatCoordinator Object	240
Exercise 3: Create a Console Application to Activate the ChatCoordinator Object	240
Exercise 4: Create a Chat Client	241
Exercise 5: Create a Configuration File to Configure the ChatClient Object.....	244
Exercise 6: Executing the Chat Application	244
Review	247
Chapter 5: Database Programming Using ADO.NET.....	249
About This Chapter.....	249
Before You Begin	249
Lesson 1: Understanding ADO.NET.....	250
Overview of ADO.NET	250
ADO.NET Architecture	251

Benefits of ADO.NET	254
Differences Between ADO and ADO.NET	255
Lesson 2: Understanding .NET Data Providers	257
Overview of .NET Data Providers	257
The OleDbConnection Class	258
The SqlConnection Class	259
The OleDbCommand Class	259
Using Data Adapters	263
The DataReader Class	266
Creating Data Access Components	
Using the Data Adapter Configuration Wizard	268
Lesson 3: Working with DataSets	273
Understanding ADO.NET DataSets	273
Creating ADO.NET DataSets	274
Manipulating an ADO.NET DataSet	277
Creating Data Views	280
Handling ADO.NET DataSet Events	281
Creating a Typed ADO.NET DataSet	282
Summary	283
Lab: Creating and Using Data Access Components	284
Exercise 1: Creating the Airline Database	284
Exercise 2: Creating Data Access Components	288
Exercise 3: Creating a Remote Data Access Component	293
Exercise 4: Creating a Windows Service to Host the Remote Data Access Component	296
Exercise 5: Creating a Remote Client Application	298
Review	303
 Chapter 6: Accessing and Manipulating XML Data	 305
Lesson 1: Understanding the XML Document Object Model	306
Overview of the XML Document Object Model	306
The XML Document Object Model	307
Creating an XML Parser	312
Lesson 2: Working with XmlReader and XmlWriter	314
Overview of XmlReader	314
Reading XML Using XmlTextReader	314
Overview of XmlWriter	318

Writing XML Using XmlTextWriter	318
Lesson 3: Working with XPathNavigator	320
Understanding the XPathNavigator Class.....	320
Performing XPath Queries	321
Lesson 4: Understanding the XML Schema Object Model.....	325
Overview of the XML Schema Object Model	325
Lesson 5: Validating an XML Document	329
Understanding XML Validation	329
Validating XML Documents Using XmlValidatingReader	330
Reading XML Fragments Using XmlValidatingReader.....	334
Lesson 6: Working with XML and DataSets.....	337
Overview of XML and DataSets.....	337
Working with XML Files and DataSets	338
Populating a DataSet with XML Data	341
Summary	343
Lab: Accessing and Manipulating XML Data.....	345
Exercise 1: Creating the Product Catalog	345
Exercise 2: Creating the Product Catalog Windows Application	346
Exercise 3: Running the Product Catalog Application	364
Review	367
Chapter 7: Creating and Consuming XML Web Services	369
Lesson 1: Understanding XML Web Services.....	370
Overview of XML Web Services	370
XML Web Services Infrastructure	371
Communication Between the Client and the XML Web Service.....	373
Lesson 2: Creating XML Web Services	375
Creating an XML Web Service.....	375
Lesson 3: Deploying and Discovering XML Web Services	393
Publishing an XML Web Service	393
Items Published with a Web Service.....	395
Understanding the XML Web Services Discovery Mechanism	396
Configuring Discovery Information for a Web Service	397
Lesson 4: Consuming an XML Web Service	399
Consuming an XML Web Service	399
Consuming the Methods Exposed by a Web Service	402
Summary	415

Lab: Creating and Consuming XML Web Services	416
Exercise 1: Creating an XML Web Service.....	416
Exercise 2: Creating a Windows Client Application	423
Review	429
 Chapter 8: Advanced XML Web Services Programming	431
About This Chapter.....	431
Before You Begin	431
Lesson 1: Controlling the Characteristics of a Web Method Using Attributes.....	432
Attributes of a Web Method	432
Buffering Responses for a Web Method.....	433
Caching the Results for a Web Method	434
Specifying a Description for a Web Method.....	434
Enabling a Session State for a Web Method.....	435
Identifying Overloaded Web Methods Using an Alias	436
Enabling a Web Method to Participate as the Root Object of a Transaction	436
Lesson 2: Creating Asynchronous Methods	438
Overview of Asynchronous Programming	438
Lesson 3: Using SOAP Extensions	446
Overview of SOAP Extensions.....	446
Building SOAP Extensions.....	447
Lesson 4: Configuring and Securing a Web Service.....	453
Understanding the Structure of the Web.config File	453
Using the Elements of the Web.config File to Configure a Web Service. . .	454
Securing a Web Service	455
Summary.....	457
Lab: Implementing Transactions, Asynchronous Methods, and SOAP Extensions.....	458
Exercise 1: Creating the LabTest Database and Authors Table.....	458
Exercise 2: Implementing the Transaction Property of the WebMethod Attribute	460
Exercise 3: Implementing a SOAP Extension in an XML Web Service...	461
Exercise 4: Creating the XML Web Service Client.....	470
Exercise 5: Calling Web Methods Asynchronously	473
Review	487

Chapter 9: Testing and Debugging XML Web Services	489
About This Chapter	489
Before You Begin	489
Lesson 1: Designing Unit Test Plans	490
Overview of the Testing Process	490
Organizing the Testing Effort	491
Requirements-Based Testing	492
Developing a Test Plan	492
Approaches to Develop Test Plans	492
Lesson 2: Overview of Visual Studio .NET Debugging Tools	494
Introduction to the Visual Studio .NET Debugging Process	494
Debugging Visual Studio .NET Applications Using the DbgClr Tool	495
Debugging .NET Applications Using the CorDbg Tool	500
Debugging XML Web Services in Visual Studio .NET	503
Lesson 3: Code Instrumentation	509
Overview of Code Instrumentation	509
Using Tracing to Instrument Code	510
Exception Handling	513
Lesson 4: Creating and Testing Multicultural Satellite Assemblies and Test Data	519
Overview of Satellite Assemblies	519
Creating Satellite Assemblies	520
Compiling Satellite Assemblies with Strong Names	522
Installing a Satellite Assembly	523
Retrieving Data from the Resource Files	523
Summary	525
Lab: Tracing and Debugging	526
Exercise 1: Implementing Tracing	526
Exercise 2: Debugging a Deployed XML Web Service	530
Review	532
Chapter 10: Deploying XML Web Services and Windows Services	533
About This Chapter	533
Before You Begin	533
Lesson 1: Understanding .NET Deployment Features	534
Understanding .NET Deployment	534
Packaging and Distribution Options	537

Deployment Scenarios	538
Lesson 2: .NET Deployment Options and Setup Programs	540
Overview of .NET Deployment Projects	540
Deploying a Windows Service	541
Deploying an XML Web Service	549
Deploying Components Using a Merge Module Project	554
Deploying .NET Components and Applications Using a Cabinet Project ..	559
Lesson 3: Registering and Locating Components and Assemblies	561
Registering Components and Assemblies	561
Locating Assemblies	564
Lesson 4: Implementing Versioning and Side-by-Side Deployment	567
Implementing Versioning in Assemblies	567
Deploying Multiple Versions of an Assembly in the Global Assembly Cache	569
Summary	573
Lab: Creating Setup Projects	574
Exercise 1: Creating a Setup Project	574
Exercise 2: Deploying a Web Service with a Web Setup Project	576
Review	577
Appendix A: Questions and Answers	579
Chapter 1: Understanding the .NET Framework	579
Chapter 2: Creating and Managing Windows Services	581
Chapter 3: Creating and Consuming Serviced Components	584
Chapter 4: Creating and Consuming .NET Remoting Objects	589
Chapter 5: Database Programming Using ADO.NET	591
Chapter 6: Accessing and Manipulating XML Data	592
Chapter 7: Creating and Consuming XML Web Services	593
Chapter 8: Advanced XML Web Services Programming	595
Chapter 9: Testing and Debugging XML Web Services	596
Chapter 10: Deploying XML Web Services and Windows Services	598
Appendix B: COM Interoperability	601
Accessing COM Components from Managed Code	601
Glossary	605
Index	613
