

MCAD/MCSD

Self-Paced Training Kit

DEVELOPING
WEB APPLICATIONS
WITH MICROSOFT
VISUAL BASIC® .NET
AND MICROSOFT
VISUAL C# .NET

Exams
70-305 and 70-315

Contents

About This Book	xvii
Chapter 1 Introduction to Web Programming	1
About This Chapter	1
Before You Begin	1
Lesson 1: Types of Applications	2
What Can You Create?	2
How Web Applications Work	3
What ASP.NET Provides	5
Advantages of ASP.NET	6
Lesson 2: Using ASP.NET	8
Parts of a Web Application	8
Web Form Components	10
The .NET Framework	12
Programming Languages	15
Lesson 3: Using Visual Studio .NET	18
The Start Page	18
Visual Studio .NET Windows	21
The Toolbox	24
Editing Web Documents	25
Editing Code	26
The Solution Explorer	29
Running a Project	30
Setting Breakpoints and Watching Variables	31
Executing Statements	33
Getting Help	34
Summary	36
Lab: Getting Started with Visual Studio .NET	37
Exercise 1: Customize the Visual Studio .NET Environment	37
Exercise 2: Setting Up a Web Hosting Account	39
Exercise 3: Choosing a Service Provider	40
Exercise 4: Exploring the ASP.NET QuickStart Tutorials	42
Review	45

Chapter 2 Creating Web Forms Applications	47
About This Chapter	47
Before You Begin	47
Lesson 1: Creating a Web Application Project	48
Creating a New Web Application	48
Organizing Your Projects with IIS	49
Creating Virtual Folders to Organize Web Applications	49
Adding Controls and Writing Code	53
The Files in a Web Forms Project	56
The Files in a Web Application	57
Lesson 2: Responding to Events	58
Events in the Life Cycle of a Web Application	58
Preserving Data on a Web Form	60
Application and Session Events	61
Web Form Events	63
Server Control Events	65
Lesson 3: Where Does Processing Occur?	67
Setting Application Boundaries	67
Managing Processes	69
Determining When an Application Ends	70
Summary	72
Lab: Building a Simple Web Application	73
Exercise 1: Creating the User Interface	74
Exercise 2: Create a Class Named FlashCardClass	74
Exercise 3: Store a FlashCardClass Object in Session State	77
Exercise 4: Use the FlashCardClass from Web Form Events	78
Review	81
Chapter 3 Working with Web Objects	83
About This Chapter	83
Before You Begin	83
Lesson 1: Namespace Fundamentals	84
Understanding Namespaces	84
References vs. Imports	90
Classes and Modules	91
Interface-to-Face	107

Lesson 2: Namespaces in a Web Application	110
Overview of Web Namespaces	110
Using the Application Object	112
Using the Page Object	113
Using the Request Object	115
Using the Response Object	116
Lesson 3: Maintaining State Information	118
Overview of Levels of State	118
Using Query Strings	118
Using Cookies	119
Using ViewState	121
Summary	125
Lab: Using Objects and Saving Data	126
Exercise 1: Create the User Interface	126
Exercise 2: Create a Translator Class	127
Exercise 3: Store a Translator Object in Session State	130
Exercise 4: Use the TransClass Object from Web Form Events	130
Review	133
Chapter 4 Creating a User Interface.....	135
About This Chapter	135
Before You Begin	135
Lesson 1: Using Controls	136
Selecting a Layout	136
Choosing the Right Control	139
Working with Text	140
Working with Tables and Lists	142
Adding Items to a List or Table at Design Time	143
Adding Items to a List or Table at Run Time	144
Getting the Selected Item from a List	146
Using Simple Data Binding with Lists	147
Adding Items to DataGrid, DataList, and Repeater Controls	149
Performing Commands	152
Getting and Setting Values	156
Displaying Graphics and Advertisements	158
Grouping Controls	160

Getting Dates	162
Getting Files from the Client	164
Lesson 2: Validating Data	167
Using Validation	167
Combining Validations	170
Canceling Validation	171
Customizing Validation	172
Lesson 3: Navigating Between Forms	175
Ways to Navigate	175
Using Hyperlinks and Redirection	176
Using the Transfer Method	176
Using the Execute Method	179
Displaying a Page in a New Browser Window	180
Summary	184
Lab: Building a Web-Based Text Editor	185
Exercise 1: Create the Sign-On Form	185
Exercise 2: Create the NewAccount Form	188
Exercise 3: Create the File Manager Form	192
Exercise 4: Create the File Editor Form	196
Exercise 5: Create the Not Authorized Web Form	201
Review	203
Chapter 5 Storing and Retrieving Data with ADO.NET	205
About This Chapter	205
Before You Begin	205
Lesson 1: Accessing Data with ADO.NET	206
Understanding ADO.NET	206
Connecting to a Database	208
Creating a Data Set	211
Displaying a Data Set	213
Changing Records in a Database	215
How ADO.NET Refers to Objects	216
Adding, Changing, and Deleting Rows	217
Updating the Database from the DataSet	219
Creating a Database Connection at Run Time	222
Updating a Run-Time Database Connection	223

Lesson 2: Using Data Sets on Web Forms	226
Displaying a Data Set in a DataGrid	226
Displaying a Data Set in a DataList	229
Displaying Data Items in Other List Controls	233
Selecting Specific Records	235
Executing Commands on a Database	236
Returning a Value From a Database	237
Changing Records Directly in a Database	239
Retrieving Records Directly from the Database	240
Lesson 3: Processing Transactions	242
Understanding Transactions	242
Data Set Transactions	244
Database Transactions	247
Enterprise Transactions	251
Summary	252
Lab: Building the Contact Management Application	253
Exercise 1: Start a Project and Create the SwitchBoard Form	253
Exercise 2: Adding Database Components	254
Exercise 3: Create the AddContact Form	256
Exercise 4: Create the Calls Form	262
Exercise 5: Create the DeleteContact and ContactTypes Forms	271
Review	272
Chapter 6 Catching and Correcting Errors	273
About This Chapter	273
Before You Begin	273
Lesson 1: Using Exception Handling	274
Exception-Handling Techniques	274
Using Exception-Handling Blocks	275
Causing Exceptions	281
Defining New Exceptions	283
Using Error Events	285
Lesson 2: Using Error Pages	288
Handling Internet-Related Exceptions	288
Using Application-Wide Error Pages	289
Using Page-Level Error Pages	292
Lesson 3: Logging Exceptions	294

Using Tracing to Log Errors	294
Turning Tracing On and Off	295
Writing Messages to the Trace Log	296
Reading the Trace Log	298
Summary	300
Lab: Adding Exception Handling to an Application	301
Exercise 1: Extending Exception Handling	301
Exercise 2: Adding an Error Event	304
Exercise 3: Creating and Viewing the Trace Log	306
Exercise 4: Extend Exception Handling to Other Web Forms	307
Review	308
Chapter 7 Advanced Web Forms Programming	309
About This Chapter	309
Before You Begin	309
Lesson 1: Saving and Retrieving User Information	310
Identifying Web Application Users	310
Storing User Information on the Client	311
Storing User Information on the Server	315
Creating Unique Keys to Identify Users	315
Creating a File to Store User Information	316
Creating an XML File	316
Creating an XML Schema	317
Specifying a Key Field	318
Reading the XML into a Data Set	318
Saving User Information on the Server	319
Retrieving User Information from the Data Set	320
Lesson 2: Sending Mail	322
Sending Mail from a Client	322
Sending Mail from the Server	324
Lesson 3: Using Frames	326
Creating Frames in Visual Studio	326
Creating a Frameset	326
Creating Pages and Adding Them to a Frameset	328
Checking Browser Support for Frames	330
Targeting Frames with Links	332

Lesson 4: Using Client-Side Scripts	333
Before You Use Scripts	334
Choosing a Scripting Language	335
Understanding the DOM	336
Adding Inline Scripts	336
Responding to Events with Script Procedures	339
Lesson 5: Consuming XML Web Services	345
Finding XML Web Services	345
Using an XML Web Service	346
Using XML Web Services from Client-Side Scripts	348
Summary	351
Lab: Using Advanced Features	352
Exercise 1: Check Advanced Feature Support	353
Exercise 2: Store User Information	356
Exercise 3: Create a Mail Web Form	359
Exercise 4: Create a Frame-Based User Interface	361
Exercise 5: Extra Practice Using Scripts and Cookies	363
Review	364
Chapter 8 Maintaining Security	365
About This Chapter	365
Before You Begin	365
Lesson 1: Authenticating and Authorizing Users	366
Access by Anonymous Users	366
Access by Authenticated Users	368
Using Authentication with HTM and HTML Files	370
Lesson 2: Using Windows Authentication	372
Enabling Windows Authentication	372
Allowing or Denying Access to Specific Users	375
Using Role-Based Authorization	376
Getting the User Identity	376
Using IIS Settings with Windows Authentication	377
Lesson 3: Using Forms Authentication	379
Enabling Forms Authentication	379
Setting the Forms Authentication Mode	380
Creating a LogIn Web Form	382
Authenticating Users with a Database	384

Adding Users to a Database	385
Authenticating Users From a Database	387
Lesson 4: Using Passport Authentication	390
Enabling Passport Authentication	390
Lesson 5: Providing Secure Communication	396
Enabling Secure Communication	396
Generating a Certificate Request	398
Requesting a Certificate	399
Installing the Certificate	399
Using Secure Communications	401
Summary	404
Lab: Creating a Secure Application	405
Exercise 1: Enabling Forms Authentication	406
Exercise 2: Creating the LogIn Web Form	406
Exercise 3: Displaying User Information	413
Exercise 4: Advanced Topics	415
Review	416
Chapter 9 Building and Deploying Web Applications	417
About This Chapter	417
Before You Begin	417
Lesson 1: Building a Web Application	418
Setting Build Options	418
Identifying the Application	419
Configuring the Application	421
Lesson 2: Deploying a Web Application	423
Using the Upload Tools	423
Hosting on Your Own Server	424
Setting Up a Virtual Folder	424
Copying the Application	425
Installing Shared Components	425
Assigning Security Privileges	427
Lesson 3: Maintaining a Deployed Application	430
Monitoring the Server	430
Repairing Deployed Applications	443
Tuning Deployed Applications	444
Setting Cache Options	445

Changing Application Protection Level	446
Adjusting processModel Attributes	446
Adjusting sessionState Attributes	447
Optimization Tips	448
Lesson 4: Deploying Across Multiple Servers	449
Scaling Up with Multiple Processors	449
Scaling Up with Multiple Servers	450
Sharing State Information	451
Summary	453
Lab: Build and Deploy a Web Application	454
Exercise 1: Prepare the Application	454
Exercise 2: Deploy the Application	454
Exercise 3: Chart Application Performance	455
Exercise 4: Tune the Application	456
Review	457
Chapter 10 Testing Web Applications	459
About This Chapter	459
Before You Begin	459
Lesson 1: Creating Tests	460
Developing a Test Plan	460
Types of Tests	461
Unit Testing	462
Integration Testing	465
Regression Testing	467
Load Testing	467
Platform Testing	472
Lesson 2: Running Tests	474
Running Tests with ACT	474
Running Tests with .NET Assemblies	481
Running Unattended Builds and Tests	485
Lesson 3: Debugging	490
Putting Test Results to Work	490
Using the Debug and Trace Classes	494
Displaying Alerts and Messages	494
Logging Debug and Trace Messages	495
Remote Debugging	496

Summary	501
Lab: Testing and Debugging	502
Exercise 1: Review a Test Plan	502
Exercise 2: Write Unit Tests	502
Exercise 3: Create a Load Test	503
Exercise 4: Step Through a Remote Process	503
Review	505
Chapter 11 Creating Custom Web Controls	507
About This Chapter	507
Before You Begin	508
Lesson 1: Creating Web User Controls	509
Creating and Using User Controls	509
Creating a User Control and Drawing Its Interface	510
Writing the Control's Properties, Methods, and Events	511
Adding the Control to a Web Form	514
Using the Control in Code	515
Adding Events to the User Control	516
Enabling Grid Layout	518
Lesson 2: Creating Composite Custom Controls	520
Creating and Using Composite Custom Controls	520
Creating the Custom Control Project	521
Creating the Test Project	524
Adding the Custom Control to the Test Project	526
Creating the Composite Control's Appearance	529
Creating Properties and Methods	532
Handling Events	536
Raising Events	538
Handling Control Resizing	539
Superclassing Server Controls	540
Lesson 3: Creating Rendered Custom Controls	543
Creating and Using Rendered Controls	543
Creating the Rendered Control's Appearance	544
Storing Property Settings	547
Getting Contained Text	548
Responding to User Actions	551
Getting Data from the User	556

Adding Custom Controls to the ToolBox	560
Setting the Toolbox Icon and TagPrefix for Custom Controls	561
Summary	563
Lab: Creating Custom Controls	564
Exercise 1: Create an AddressBox User Control	564
Exercise 2: Create the DigitPad Composite Custom Control	565
Exercise 3: Create the BarChart Rendered Custom Control	566
Review	567
Chapter 12 Working with Multimedia	569
About This Chapter	569
Before You Begin	569
Lesson 1: Playing Audio	570
Ways to Play Audio	570
Playing Background Sounds	571
Embedding Sounds	571
Sounds as ActiveX Objects	573
Lesson 2: Displaying Video	581
Ways to Display Video	581
Using the img Element	581
Embedding Videos	582
Videos as ActiveX Objects	583
ActiveX Objects Within Netscape Navigator	585
Versions of Windows Media Player	585
Lesson 3: Animating Web Pages	587
Ways to Display Animations	587
Animating Text	588
Animating Simple Graphics	590
Displaying Animations as Objects or Plug-Ins	591
Animating with Client-Side Scripts	591
Animating with HTML+TIME	593
Using HTML+TIME	594
Creating Timelines	595
Creating Time Containers	597
Animating Attributes	597
Controlling Audio, Video, and Other Media	598

Summary	600
Lab: Creating a Multimedia Application	601
Exercise 1: Using Sound and Motion	601
Exercise 2: Displaying a Slide Show	602
Review	604
Chapter 13 Formatting Web Application Output	605
About This Chapter	605
Before You Begin	605
Lesson 1: Using Cascading Style Sheets	606
How Styles Work	606
Using Style Sheets with Web Forms	609
Modifying Styles	609
Adding Styles	611
Using Style Classes	612
Creating Styles for Specific Elements	612
Creating Nested Styles	614
Changing Style Sheets at Run Time	615
Lesson 2: Using XSL Transformations	622
How XSL Transformations Work	622
Creating an XML File	624
Creating an XSL File	626
Changing Layout	627
Including Other Templates	629
Repeating Tasks	630
Inserting Hyperlinks and Other HTML Elements	632
Sorting Items	634
Performing Conditional Tasks	634
Summary	637
Lab: Creating the Cookbook	638
Exercise 1: Create and Attach a Style Sheet	638
Exercise 2: Provide Alternative Style Sheets	639
Exercise 3: Perform XSL Transformation	641
Exercise 4: On Your Own	642
Review	643

Chapter 14 Providing Help	645
About This Chapter	645
Before You Begin	645
Lesson 1: Adding Help to Web Applications	646
Displaying ToolTips	646
Displaying Help as Web Forms or HTML	647
Displaying HTML Help	649
Lesson 2: Using the HTML Help Workshop	652
Creating HTML Help	652
Setting Project Options	654
Building Tables of Contents	656
Adding Index Entries	660
Adding Cross-References	661
Enabling Searches	664
Compiling and Previewing Help	664
Lesson 3: Linking HTML Help to Web Forms	666
Displaying the HTML Help Viewer	666
Displaying HTML Help in the Browser	668
Displaying Context-Sensitive Help	668
Summary	671
Lab: Building and Using an HTML Help File	672
Exercise 1: Creating a Help Project	672
Exercise 2: Enabling Contents, Index, and Searching	673
Exercise 3: Adding Index Keywords	675
Exercise 4: Linking Help to a Web Form	676
Review	678
Chapter 15 Globalizing Web Applications	679
About This Chapter	679
Before You Begin	679
Lesson 1: Choosing an Approach	680
Ways to Globalize Web Applications	680
Detecting the User's Culture	681
Redirecting to Culture-Specific Web Applications	682
Adjusting to Current Culture at Run Time	686
Using Satellite Assemblies	691

Lesson 2: Creating and Using Satellite Assemblies	692
How Satellite Assemblies Work	692
Enabling HTML Elements for Resources	694
Creating Resource Files	696
Loading Resource Files	698
Getting and Setting User-Interface Culture	698
Displaying Resource Strings	700
Lesson 3: Globalization Issues	702
General Programming Issues	702
Character Encoding	703
Summary	706
Lab: Create a Currency Converter	707
Exercise 1: Creating the Currency Converter Web Form	707
Exercise 2: Creating the User-Interface Resource Files	708
Exercise 3: Loading Resources Based on User Culture	710
Exercise 4: Performing Culture-Dependent Conversion	712
Review	714
Appendix Questions and Answers	715
Glossary	727
Index	733
