

# PHYSICAL CHEMISTRY

DAVID W. BALDWIN

# Contents

*Preface xv*

## **1 Gases and the Zeroth Law of Thermodynamics 1**

- 1.1 Synopsis 1
- 1.2 System, Surroundings, and State 2
- 1.3 The Zeroth Law of Thermodynamics 3
- 1.4 Equations of State 5
- 1.5 Partial Derivatives and Gas Laws 8
- 1.6 Nonideal Gases 10
- 1.7 More on Derivatives 18
- 1.8 A Few Partial Derivatives Defined 20
- 1.9 Summary 21
- Exercises 22

## **2 The First Law of Thermodynamics 24**

- 2.1 Synopsis 24
- 2.2 Work and Heat 24
- 2.3 Internal Energy and the First Law of Thermodynamics 32
- 2.4 State Functions 33
- 2.5 Enthalpy 36
- 2.6 Changes in State Functions 38
- 2.7 Joule-Thomson Coefficients 42
- 2.8 More on Heat Capacities 46
- 2.9 Phase Changes 50
- 2.10 Chemical Changes 53
- 2.11 Changing Temperatures 58
- 2.12 Biochemical Reactions 60
- 2.13 Summary 62
- Exercises 63

### **3 The Second and Third Laws of Thermodynamics 66**

- 3.1 Synopsis 66
- 3.2 Limits of the First Law 66
- 3.3 The Carnot Cycle and Efficiency 68
- 3.4 Entropy and the Second Law of Thermodynamics 72
- 3.5 More on Entropy 75
- 3.6 Order and the Third Law of Thermodynamics 79
- 3.7 Entropies of Chemical Reactions 81
- 3.8 Summary 85
- Exercises 86

### **4 Free Energy and Chemical Potential 89**

- 4.1 Synopsis 89
- 4.2 Spontaneity Conditions 89
- 4.3 The Gibbs Free Energy and the Helmholtz Energy 92
- 4.4 Natural Variable Equations and Partial Derivatives 96
- 4.5 The Maxwell Relationships 99
- 4.6 Using Maxwell Relationships 103
- 4.7 Focusing on  $\Delta G$  105
- 4.8 The Chemical Potential and Other Partial Molar Quantities 108
- 4.9 Fugacity 110
- 4.10 Summary 114
- Exercises 115

### **5 Introduction to Chemical Equilibrium 118**

- 5.1 Synopsis 118
- 5.2 Equilibrium 119
- 5.3 Chemical Equilibrium 121
- 5.4 Solutions and Condensed Phases 129
- 5.5 Changes in Equilibrium Constants 132
- 5.6 Amino Acid Equilibria 135
- 5.7 Summary 136
- Exercises 138

### **6 Equilibria in Single-Component Systems 141**

- 6.1 Synopsis 141
- 6.2 A Single-Component System 145
- 6.3 Phase Transitions 145
- 6.4 The Clapeyron Equation 148
- 6.5 The Clausius-Clapeyron Equation 152
- 6.6 Phase Diagrams and the Phase Rule 154
- 6.7 Natural Variables and Chemical Potential 159
- 6.8 Summary 162
- Exercises 163

## **7 Equilibria in Multiple-Component Systems 166**

- 7.1 Synopsis 166
- 7.2 The Gibbs Phase Rule 167
- 7.3 Two Components: Liquid/Liquid Systems 169
- 7.4 Nonideal Two-Component Liquid Solutions 179
- 7.5 Liquid/Gas Systems and Henry's Law 183
- 7.6 Liquid/Solid Solutions 185
- 7.7 Solid/Solid Solutions 188
- 7.8 Colligative Properties 193
- 7.9 Summary 201
- Exercises 203

## **8 Electrochemistry and Ionic Solutions 206**

- 8.1 Synopsis 206
- 8.2 Charges 207
- 8.3 Energy and Work 210
- 8.4 Standard Potentials 215
- 8.5 Nonstandard Potentials and Equilibrium Constants 218
- 8.6 Ions in Solution 225
- 8.7 Debye-Hückel Theory of Ionic Solutions 230
- 8.8 Ionic Transport and Conductance 234
- 8.9 Summary 237
- Exercises 238

## **9 Pre-Quantum Mechanics 241**

- 9.1 Synopsis 241
- 9.2 Laws of Motion 242
- 9.3 Unexplainable Phenomena 248
- 9.4 Atomic Spectra 248
- 9.5 Atomic Structure 251
- 9.6 The Photoelectric Effect 253
- 9.7 The Nature of Light 253
- 9.8 Quantum Theory 257
- 9.9 Bohr's Theory of the Hydrogen Atom 262
- 9.10 The de Broglie Equation 267
- 9.11 Summary: The End of Classical Mechannics 269
- Exercises 271

## **10 Introduction to Quantum Mechanics 273**

- 10.1 Synopsis 273
- 10.2 The Wavefunction 274
- 10.3 Observables and Operators 276
- 10.4 The Uncertainty Principle 279
- 10.5 The Born Interpretation of the Wavefunction; Probabilities 281

- 10.6 Normalization 283
- 10.7 The Schrödinger Equation 285
- 10.8 An Analytic Solution: The Particle-in-a-Box 288
- 10.9 Average Values and Other Properties 293
- 10.10 Tunneling 296
- 10.11 The Three-Dimensional Particle-in-a-Box 299
- 10.12 Degeneracy 303
- 10.13 Orthogonality 306
- 10.14 The Time-Dependent Schrödinger Equation 308
- 10.15 Summary 309
- Exercises 311

## **11 Quantum Mechanics: Model Systems and the Hydrogen Atom 315**

- 11.1 Synopsis 315
- 11.2 The Classical Harmonic Oscillator 316
- 11.3 The Quantum-Mechanical Harmonic Oscillator 318
- 11.4 The Harmonic Oscillator Wavefunctions 324
- 11.5 The Reduced Mass 330
- 11.6 Two-Dimensional Rotations 333
- 11.7 Three-Dimensional Rotations 341
- 11.8 Other Observables in Rotating Systems 347
- 11.9 The Hydrogen Atom: A Central Force Problem 352
- 11.10 The Hydrogen Atom: The Quantum-Mechanical Solution 353
- 11.11 The Hydrogen Atom Wavefunctions 358
- 11.12 Summary 365
- Exercises 367

## **12 Atoms and Molecules 370**

- 12.1 Synopsis 370
- 12.2 Spin 371
- 12.3 The Helium Atom 374
- 12.4 Spin Orbitals and the Pauli Principle 377
- 12.5 Other Atoms and the Aufbau Principle 382
- 12.6 Perturbation Theory 386
- 12.7 Variation Theory 394
- 12.8 Linear Variation Theory 398
- 12.9 Comparison of Variation and Perturbation Theories 402
- 12.10 Simple Molecules and the Born-Oppenheimer Approximation 403
- 12.11 Introduction to LCAO-MO Theory 405
- 12.12 Properties of Molecular Orbitals 409
- 12.13 Molecular Orbitals of Other Diatomic Molecules 410
- 12.14 Summary 413
- Exercises 416

## **13 Introduction to Symmetry in Quantum Mechanics 419**

- 13.1 Synopsis 419
- 13.2 Symmetry Operations and Point Groups 419
- 13.3 The Mathematical Basis of Groups 423
- 13.4 Molecules and Symmetry 427
- 13.5 Character Tables 430
- 13.6 Wavefunctions and Symmetry 437
- 13.7 The Great Orthogonality Theorem 438
- 13.8 Using Symmetry in Integrals 441
- 13.9 Symmetry-Adapted Linear Combinations 443
- 13.10 Valence Bond Theory 446
- 13.11 Hybrid Orbitals 450
- 13.12 Summary 456
- Exercises 457

## **14 Rotational and Vibrational Spectroscopy 461**

- 14.1 Synopsis 461
- 14.2 Selection Rules 462
- 14.3 The Electromagnetic Spectrum 463
- 14.4 Rotations in Molecules 466
- 14.5 Selection Rules for Rotational Spectroscopy 471
- 14.6 Rotational Spectroscopy 473
- 14.7 Centrifugal Distortions 479
- 14.8 Vibrations in Molecules 481
- 14.9 The Normal Modes of Vibration 483
- 14.10 Quantum-Mechanical Treatment of Vibrations 484
- 14.11 Selection Rules for Vibrational Spectroscopy 487
- 14.12 Vibrational Spectroscopy of Diatomic and Linear Molecules 491
- 14.13 Symmetry Considerations for Vibrations 496
- 14.14 Vibrational Spectroscopy of Nonlinear Molecules 498
- 14.15 Nonallowed and Nonfundamental Vibrational Transitions 503
- 14.16 Fingerprint Regions 504
- 14.17 Rotational-Vibrational Spectroscopy 506
- 14.18 Raman Spectroscopy 511
- 14.19 Summary 514
- Exercises 515

## **15 Introduction to Electronic Spectroscopy and Structure 519**

- 15.1 Synopsis 519
- 15.2 Selection Rules 520
- 15.3 The Hydrogen Atom 520
- 15.4 Angular Momenta: Orbital and Spin 522
- 15.5 Multiple Electrons: Term Symbols and Russell-Saunders Coupling 526

- 15.6 Electronic Spectra of Diatomic Molecules 534
- 15.7 Vibrational Structure and the Franck-Condon Principle 539
- 15.8 Electronic Spectra of Polyatomic Molecules 541
- 15.9 Electronic Spectra of  $\pi$  Electron Systems:  
Hückel Approximations 543
- 15.10 Benzene and Aromaticity 546
- 15.11 Fluorescence and Phosphorescence 548
- 15.12 Lasers 550
- 15.13 Summary 556
- Exercises 558

## **16 Introduction to Magnetic Spectroscopy 560**

- 16.1 Synopsis 560
- 16.2 Magnetic Fields, Magnetic Dipoles, and Electric Charges 561
- 16.3 Zeeman Spectroscopy 564
- 16.4 Electron Spin Resonance 567
- 16.5 Nuclear Magnetic Resonance 571
- 16.6 Summary 582
- Exercises 584

## **17 Statistical Thermodynamics: Introduction 586**

- 17.1 Synopsis 586
- 17.2 Some Statistics Necessities 587
- 17.3 The Ensemble 590
- 17.4 The Most Probable Distribution: Maxwell-Boltzmann  
Distribution 593
- 17.5 Thermodynamic Properties from Statistical Thermodynamics 600
- 17.6 The Partition Function: Monatomic Gases 604
- 17.7 State Functions in Terms of Partition Functions 608
- 17.8 Summary 613
- Exercises 614

## **18 More Statistical Thermodynamics 616**

- 18.1 Synopsis 617
- 18.2 Separating  $q$ : Nuclear and Electronic Partition Functions 617
- 18.3 Molecules: Electronic Partition Functions 621
- 18.4 Molecules: Vibrations 623
- 18.5 Diatomic Molecules: Rotations 628
- 18.6 Polyatomic Molecules: Rotations 634
- 18.7 The Partition Function of a System 636
- 18.8 Thermodynamic Properties of Molecules from  $Q$  637
- 18.9 Equilibria 640
- 18.10 Crystals 644
- 18.11 Summary 648
- Exercises 649

## **19 The Kinetic Theory of Gases 651**

- 19.1 Synopsis 651
- 19.2 Postulates and Pressure 652
- 19.3 Definitions and Distributions of Velocities of Gas Particles 656
- 19.4 Collisions of Gas Particles 666
- 19.5 Effusion and Diffusion 671
- 19.6 Summary 677
- Exercises 678

## **20 Kinetics 680**

- 20.1 Synopsis 680
- 20.2 Rates and Rate Laws 681
- 20.3 Characteristics of Specific Initial Rate Laws 685
- 20.4 Equilibrium for a Simple Reaction 694
- 20.5 Parallel and Consecutive Reactions 696
- 20.6 Temperature Dependence 702
- 20.7 Mechanisms and Elementary Processes 706
- 20.8 The Steady-State Approximation 710
- 20.9 Chain and Oscillating Reactions 714
- 20.10 Transition-State Theory 719
- 20.11 Summary 725
- Exercises 726

## **21 The Solid State: Crystals 731**

- 21.1. Synopsis 731
- 21.2 Types of Solids 732
- 21.3 Crystals and Unit Cells 733
- 21.4 Densities 738
- 21.5 Determination of Crystal Structures 740
- 21.6 Miller Indices 744
- 21.7 Rationalizing Unit Cells 752
- 21.8 Lattice Energies of Ionic Crystals 755
- 21.9 Crystal Defects and Semiconductors 759
- 21.10 Summary 760
- Exercises 762

## **22 Surfaces 765**

- 22.1 Synopsis 765
- 22.2 Liquids: Surface Tension 766
- 22.3 Interface Effects 771
- 22.4 Surface Films 777
- 22.5 Solid Surfaces 778
- 22.6 Coverage and Catalysis 783

**22.7 Summary 788**

**Exercises 790**

**Appendixes 792**

**1 Useful Integrals 792**

**2 Thermodynamic Properties of Various Substances 794**

**3 Character Tables 797**

**4 Infrared Correlation Tables 802**

**5 Nuclear Properties 805**

**Answers to Selected Exercises 806**

**Photo Credits 817**

**Index 819**
