

BATCH FERMENTATION

Modeling, Monitoring, and Control

Ali Cinar
Satish J. Parulekar
Cenk Ündey
Gülnur Birol

Contents

Preface	v
Nomenclature	xv
1 Introduction	1
1.1 Characteristics of Batch Processes	4
1.2 Focus Areas of the Book	6
1.2.1 Batch Process Modeling	7
1.2.2 Process Monitoring	11
1.2.3 Process Control	12
1.2.4 Fault Diagnosis	13
1.3 Penicillin Fermentation	13
1.4 Outline of the Book	15
2 Kinetics and Process Models	21
2.1 Introduction and Background	21
2.2 Mathematical Representation of Bioreactor Operation	23
2.3 Bioreactor Operation Modes	24
2.3.1 Batch Operation	25
2.3.2 Fed-Batch Operation	26
2.3.3 Continuous Operation	26
2.4 Conservation Equations for a Single Bioreactor	27
2.4.1 Conservation Equations for the Gas Phase	28
2.4.2 Conservation Equations for Cell Culture	30
2.5 Unstructured Kinetic Models	33
2.5.1 Rate Expressions for Cell Growth	34
2.5.2 Rate Expressions for Nutrient Uptake	37
2.5.3 Rate Expressions for Metabolite Production	37
2.5.4 Miscellaneous Remarks	39
2.6 Structured Kinetic Models	39

2.6.1	Morphologically Structured Models	40
2.6.2	Chemically Structured Models	43
2.6.3	Chemically and Morphologically Structured Models	44
2.6.4	Genetically Structured Models	47
2.7	Case Studies	49
2.7.1	An Unstructured Model for Penicillin Production . .	49
2.7.2	A Structured Model for Penicillin Production	58
3	Experimental Data Collection and Pretreatment	67
3.1	Sensors	68
3.2	Computer-Based Data Acquisition	71
3.3	Statistical Design of Experiments	73
3.3.1	Factorial Design	75
3.3.2	Fractional Factorial Design	83
3.3.3	Analysis of Data from Screening Experiments	86
3.4	Data Pretreatment: Outliers and Data Reconciliation . .	89
3.4.1	Data Reconciliation	90
3.4.2	Outlier Detection	92
3.5	Data Pretreatment: Signal Noise Reduction	99
3.5.1	Signal Noise Reduction Using Statistical Techniques	100
3.5.2	Wavelets and Signal Noise Reduction	103
3.6	Theoretical Confirmation/Stoichiometry and Energetics of Growth	110
3.6.1	Stoichiometric Balances	110
3.6.2	Thermodynamics of Cellular Growth	112
4	Methods for Linear Data-Based Model Development	119
4.1	Principal Components Analysis	121
4.2	Multivariable Regression Techniques	125
4.2.1	Stepwise Regression	127
4.2.2	Ridge Regression	127
4.2.3	Principal Components Regression	128
4.2.4	Partial Least Squares	129
4.3	Input-Output Modeling of Dynamic Processes	131
4.3.1	Time Series Models	131
4.3.2	State-Space Models	135
4.3.3	State Estimators	142
4.3.4	Batch Modeling with Local Model Systems	152
4.4	Functional Data Analysis	158
4.5	Multivariate Statistical Paradigms for Batch Process Modeling	164

4.5.1	Multiway Principal Component Analysis-MPCA . . .	164
4.5.2	Multiway Partial Least Squares-MPLS	165
4.5.3	Multiblock PLS and PCA Methods for Modeling Complex Processes	168
4.5.4	Multivariate Covariates Regression	173
4.5.5	Other Three-way Techniques	174
4.6	Artificial Neural Networks	175
4.6.1	Structures of ANNs	177
4.6.2	ANN Applications in Fermentation Industry	183
4.7	Extensions of Linear Modeling Techniques to Nonlinear Model Development	185
4.7.1	Nonlinear Input-Output Models in Time Series Modeling Literature	185
4.7.2	Nonlinear PLS Models	192
5	System Science Methods for Nonlinear Model Development by İnanç Birol	195
5.1	Deterministic Systems and Chaos	196
5.2	Nonlinear Time Series Analysis	215
5.2.1	State-Space Reconstruction	215
5.2.2	Nonlinear Noise Filtering	222
5.2.3	System Classification	227
5.3	Model Development	228
5.4	Software Resources	239
6	Statistical Process Monitoring	243
6.1	SPM Based on Univariate Techniques	245
6.1.1	Shewhart Control Charts	246
6.1.2	Cumulative Sum (CUSUM) Charts	255
6.1.3	Moving Average Control Charts for Individual Measurements	257
6.1.4	Exponentially Weighted Moving-Average Chart . . .	260
6.2	SPM of Continuous Processes with Multivariate Statistical Techniques	261
6.2.1	SPM of Continuous Processes with PCA	264
6.2.2	SPM of Continuous Processes with PLS	264
6.3	Data Length Equalization and Determination of Phase Landmarks in Batch Fermentation	269
6.3.1	Indicator Variable Technique	271
6.3.2	Dynamic Time Warping	277
6.3.3	Curve Registration	303
6.4	Multivariable Batch Processes	315

6.4.1	Reference Database of Normal Process Operation . .	316
6.4.2	Multivariate Charts for SPM	318
6.4.3	Multiway PCA-based SPM for Postmortem Analysis	326
6.4.4	Multiway PLS-based SPM for Postmortem Analysis	331
6.4.5	Multiway Multiblock Methods	339
6.4.6	Multiscale SPM Techniques Based on Wavelets . . .	346
6.5	On-line Monitoring of Batch/Fed-Batch Fermentation Processes	352
6.5.1	MSPM Using Estimates of Trajectories	353
6.5.2	Adaptive Hierarchical PCA	360
6.5.3	Online MSPM and Quality Prediction by Preserving Variable Direction	366
6.5.4	Kalman Filters for Estimation of Final Product Quality	377
6.6	Monitoring of Successive Batch Runs	378
7	Process Control	383
7.1	Introduction	383
7.2	Open-Loop (Optimal) Control	387
7.2.1	Nonlinear Models of Bioreactor Dynamics	387
7.2.2	Background on Optimal Control Theory	388
7.2.3	Singular Control	391
7.2.4	Optimal Control	392
7.2.5	Case Study - Feeding Policy in Single-Cycle and Re- peated Fed-Batch Operations	393
7.3	Forced Periodic Operations	406
7.3.1	Preliminaries on the π -Criterion	407
7.3.2	Case Study - Forced Periodic Operations	413
7.4	Feedback Control	423
7.4.1	State-Space Representation	423
7.4.2	Multi-Loop Feedback Control	424
7.5	Optimal Linear-Quadratic Feedback Control	434
7.6	Model Predictive Control	436
8	Fault Diagnosis	453
8.1	Contribution Plots	456
8.2	Statistical Techniques for Fault Diagnosis	462
8.2.1	Statistical Discrimination and Classification	462
8.2.2	FDD with Fisher's Discriminant Analysis	470
8.2.3	FDD with Neural Networks	476

CONTENTS

xiii

8.2.4	Statistical Techniques for Sensor Fault Detection . .	478
8.3	Model-based Fault Diagnosis Techniques	481
8.3.1	Residuals-Based FDD Methods	485
8.3.2	FDD Based on Model Parameter Estimation	495
8.3.3	FDD with Hidden Markov Models	498
8.4	Model-free Fault Diagnosis Techniques	501
8.4.1	Real-time Knowledge-Based Systems (RTKBS) . . .	503
8.4.2	Real-time Supervisory KBS for Process Monitoring and FDD	510
9	Related Developments	517
9.1	Role of Metabolic Engineering in Process Improvement . . .	519
9.2	Contributions of MFA and MCA to Modeling	524
9.3	Dynamic Optimization of Batch Process Operations	528
9.4	Integrated Supervisory KBS for On-line Process Supervision	533
Appendix		537
