Real-Time and Multi-Agent Systems

Springer

PRACTITIONER SERIES

Contents

Introduction	xv
1. Problems Encountered with Distributed Systems	1
1.1 Definition of a Distributed Multi-Agent Application	1
1.2 Development of Remote Processing Systems	5
1.3 Architecture of Remote Processing Systems	10
1.4 Distributed Applications	14
1.5 Distributed System Properties	21
1.6 Activity Management in a Distributed Context	25
1.7 Process Synchronization and Resource Management	35
1.8 Validation Protocols for Global Applications	47
1.9 Fault Tolerance, Security and Protection	53
1.10 Conclusion	53
2. Interaction Models	55
2.1 New Generation Distributed Software Architecture	56
2.2 Event-Oriented Concurrent and Distributed Programming	57
2.3 Massively Parallel Processors and Distributed Programming ...	57
2.4 Basic Principles of Distributed Programming	62
2.5 The Method of Analysis for a Multi-Agent Application	66
2.6 Communication Channels	67
2.7 Elements of a High-Level Distributed Programming Language	69
2.8 Anonymous Communication	75
2.9 Hoare Monitors: High-Level Synchronization and Communication Tools for Parallel Machines with a Global Memory	78
2.10 The Corba Norm	87
2.11 Conclusion	100
3. PVM: Parallel Programming Tools	103
3.1 PVM Presented	103
3.2 PVM Installation	105
3.3 The User Interface or PVM Primitives	109

4. Distributed Programming under Unix	125
4.1 Unix and the Client-Server Model	125
4.2 Unix Tools for Distributed Data-Processing	126
4.3 IP Interfaces	130
4.4 TCP and UDP Data Transmission Protocols.....	132
4.5 Unix Tools for Distributed Programming	134
4.6 Sockets	147
4.7 Conclusion	174
5. Principles of Real-Time Data-Processing	175
5.1 Structure and Function of an Automated System	175
5.2 Combinatorial Automated Systems	180
5.3 Sequential Automated Systems	181
5.4 The GRAFCET: Synthesis Tool for Industrial Automated Systems	182
5.5 Technological Options for the Implementation of the Command Part	183
5.6 Digital Control Systems for Processes	185
5.7 The Need for an Adapted Specification Methodology.....	185
5.8 Process Dynamics	190
5.9 Periodic and Aperiodic Tasks	194
5.10 Basic Functions of Real-Time Kernels	199
5.11 Local Industrial Networks	201
5.12 The Development Environment of VxWorks Real-Time Applications	215
5.13 The Environment of a Multi-Agent Real-Time Application	224
5.14 Tools for the Development and Co-verification of Embedded Systems	231
5.15 CORBA Telecommunications	233
6. Prolog III and Real-Time System Engineering	239
6.1 Impact of Formal Specifications on Software Development	240
6.2 Reminder of Discrete Event Systems	252
6.3 Prolog III and the Study of Simple Real-Time Systems	256
6.4 Specification Methodology of Complex MSS Systems	269
6.5 Conclusion	296
6.6 Project 1: Modelling Distributed Systems	297
7. Parallel Image Processing	307
7.1 Presentation	307
7.2 Implementation	309
8. Client-Server Applications under Unix	319
8.1 Presentation	319
8.2 Implementation	322
8.3 Mini Project 1: "An Event Management System"	327

8.4	Mini Project 2: “A VxWorks Version of the Temporal Constraint Manager”	329
8.5	The Sources of the Temporal Constraint Management System	329
9.	Control of a Product Processing Chain	343
9.1	Functioning	343
9.2	Analysis and Specification using the SA/RT (SA/SD) Method	344
9.3	Design and Implementation of the Command Part	362
10.	Management of Persistent Objects	375
10.1	Presentation	375
10.2	The Object Manager (OM)	376
Appendix 1: Problems with Hardware-Software Layer Coupling in a Data-Processing System		403
A1.1	The Target Machine	403
Appendix 2: Basic Principles of Peripheral Handlers		417
A2.1	Presentation	417
A2.2	General Notes on Programming	419
A2.3	Communication between the Kernel and the Handler	420
A2.4	Installation Procedure of a New Handler under Unix	422
Appendix 3: Process Management		425
A3.1	Introduction	425
A3.2	Scheduler Implementation Principle	426
A3.3	The Scheduler and the Internal Synchronization of Handlers....	428
Appendix 4: Management of the Central Memory		431
A4.1	The Part Supported by Hardware	431
A4.2	The Paging Mechanism	432
A4.3	The Segmentation Mechanism	433
A4.4	Characteristics of Segment Systems	433
A4.5	386 Selectors	435
A4.6	Segment Descriptors	435
A4.7	The Part Supported by the Kernel	436
Appendix 5: Introduction to Prolog III		439
A5.1	Functioning of a Logic Program	439
A5.2	Prolog III	442
A5.3	Accepted Expressions	443
A5.4	Conclusion	445
Bibliography		447
Index		457
