

THIRD EDITION

# ESSENTIALS OF GEOLOGY

REED WICANDER \* JAMES S. MONROE

## Chapter 1

### Understanding Earth: An Introduction to Physical Geology 2

Prologue	3
Introduction to Earth Systems	4
What Is Geology?	5
Perspective 1.1: The Aral Sea	6
How Does Geology Relate to the Human Experience?	9
How Does Geology Affect Our Everyday Lives?	10
Natural Events	10
Economics and Politics	10
Our Role as Decision-Makers	10
Consumers and Citizens	10
Sustainable Development	11
Global Geologic and Environmental Issues Facing Humankind	11
The Origin of the Solar System and the Differentiation of Early Earth	12
Why Is Earth a Dynamic Planet?	14
Geology and the Formulation of Theories	15
Plate Tectonic Theory	15
The Rock Cycle	17
How Are the Rock Cycle and Plate Tectonics Related?	18
Geologic Time and Uniformitarianism	20
How Does the Study of Geology Benefit Us?	21
Chapter Summary	21
Important Terms	22
Review Questions	22
Additional Readings	23
World Wide Web Activities	24
CD-ROM Exploration	25

## Chapter 2

<b>Plate Tectonics: A Unifying Theory</b>	<b>26</b>
Prologue	27
Introduction	28
Why Should You Study Plate Tectonics?	29
What Were Some Early Ideas About Continental Drift?	29
Alfred Wegener and the Continental Drift Hypothesis	30
What Is the Evidence for Continental Drift?	30
Continental Fit	30
Similarity of Rock Sequences and Mountain Ranges	31
Glacial Evidence	31
Fossil Evidence	32
Paleomagnetism and Polar Wandering	33
How Do Magnetic Reversals Relate to Seafloor Spreading?	35
Perspective 2.1: Paleogeographic Reconstructions and Maps	36
Plate Tectonic Theory	39
The Supercontinent Cycle	40
What Are the Three Types of Plate Boundaries?	41
Divergent Boundaries	41
Convergent Boundaries	42
Transform Boundaries	45
How Are Plate Movement and Motion Determined?	47
Hot Spots and Absolute Motion	48
What Is the Driving Mechanism of Plate Tectonics?	48
How Does Plate Tectonics Affect the Distribution of Natural Resources?	49
Chapter Summary	51
Important Terms	51

Review Questions	52
Additional Readings	52
World Wide Web Activities	53
CD-ROM Exploration	53

### Chapter 3

## Minerals: The Building Blocks of Rocks 54

Prologue	55
Introduction	57
Why Should You Study Minerals?	57
Matter—What Is It and What Does It Consist of?	57
Elements and Atoms	57
Bonding and Compounds	58
What Are Minerals?	61
Naturally Occurring Inorganic Substances	61
Mineral Crystals	61
Chemical Composition of Minerals	62
Physical Properties of Minerals	62
How Many Minerals Are Known?	62
Mineral Groups Recognized by Geologists	63
The Silicate Minerals	63
Perspective 3.1: Gold and Silver	64
Other Mineral Groups	67
How Are Minerals Identified?	68
Color and Luster	68
Crystal Form	68
Cleavage and Fracture	68
Hardness	69
Specific Gravity	69
Other Useful Mineral Properties	70
Where and How Do Minerals Originate?	70
What Are Rock-Forming Minerals?	71
Mineral Resources and Reserves	71
Chapter Summary	73
Important Terms	74
Review Questions	74
Additional Readings	75
World Wide Web Activities	76
CD-ROM Exploration	77

### Chapter 4

## Igneous Rocks and Intrusive Igneous Activity 78

Prologue	79
Introduction	80
Why Should You Study Igneous Rocks and Intrusive Igneous Activity?	81
The Properties and Behavior of Magma and Lava	81
Composition of Magma	81
How Hot Are Magma and Lava?	82
Viscosity—Resistance to Flow	82
How Does Magma Originate and Change?	83
Bowen's Reaction Series	83
The Origin of Magma at Spreading Ridges	84
Subduction Zones and the Origin of Magma	85
Processes Resulting in Chemical Changes in Magma	85
Igneous Rocks—What Are Their Characteristics?	87
Igneous Rock Textures	87
The Composition of Igneous Rocks	89
Classifying Igneous Rocks	89
Intrusive Igneous Bodies: Plutons—Characteristics and Origins	92
Dikes and Sills	92
Laccoliths	93
Volcanic Pipes and Necks	94
Batholiths and Stocks	94
How Are Batholiths Emplaced in Earth's Crust?	94
Perspective 4.1: Some Remarkable Volcanic Necks	96
Chapter Summary	98
Important Terms	99
Review Questions	99
Additional Readings	100
World Wide Web Activities	101
CD-ROM Exploration	101

## Chapter 5

<b>Volcanism and Volcanoes</b>	<b>102</b>
Prologue	103
Introduction	105
Why Should You Study Volcanism and Volcanoes?	105
Volcanism	106
Volcanic Gases	106
Lava Flows	107
Pyroclastic Materials	108
What Are Volcanoes?	110
Shield Volcanoes	111
Cinder Cones	112
Composite Volcanoes	113
Lava Domes	114
Perspective 5.1: Eruptions of Cascade Range Volcanoes	116
Do All Eruptions Build Up Volcanoes?	118
Fissure Eruptions and Basalt Plateaus	119
Pyroclastic Sheet Deposits	119
How Large Is an Eruption and How Long Do Eruptions Last?	120
Is It Possible to Predict Eruptions?	121
Distribution of Volcanoes	122
Plate Tectonics, Volcanoes, and Plutons	123
Divergent Plate Boundaries and Igneous Activity	124
Igneous Activity at Convergent Plate Boundaries	124
Intraplate Volcanism	125
Chapter Summary	125
Important Terms	126
Review Questions	126
Additional Readings	127
World Wide Web Activities	128
CD-ROM Exploration	129

## Chapter 6

<b>Weathering, Erosion, and Soil</b>	<b>130</b>
Prologue	131
Introduction	133
Why Should You Study Weathering, Erosion, and Soil?	133
Mechanical Weathering	133
Frost Action	134
Pressure Release	134
Thermal Expansion and Contraction	135
Growth of Salt Crystals	135
Organisms and Mechanical Weathering	135
Chemical Weathering—Decomposition of Earth Materials	135
Solution	136
Oxidation	137
Perspective 6.1: Industrialization and Acid Rain	138
Hydrolysis	140
How Fast Does Chemical Weathering Take Place?	140
Particle Size and the Rate of Chemical Weathering	140
Climate and Chemical Weathering	140
The Importance of Parent Material	140
What Is Soil, and How Does It Form?	142
The Soil Profile	142
What Factors Are Important in Soil Formation?	143
Climate and Soil	143
Parent Material	144
Activities of Organisms	144
The Lay of the Land—Relief and Slope	144
Time	145
Soil Degradation	145
Weathering and Natural Resources	147
Chapter Summary	148
Important Terms	149
Review Questions	149
Additional Readings	150
World Wide Web Activities	151

## **Chapter 7**

<b>Sediment and Sedimentary Rocks</b>	<b>152</b>
Prologue	153
Introduction—What Is Sediment and How Does It Originate?	155
Why Should You Study Sediment and Sedimentary Rocks?	155
Sediment Transport and Deposition	156
How Is Sediment Transformed into Sedimentary Rock?	157
What Kinds of Sedimentary Rocks Do Geologists Recognize?	159
Detrital Sedimentary Rocks	159
Chemical and Biochemical Sedimentary Rocks	160
Sedimentary Facies	162
Reading the Story in Sedimentary Rocks	163
Sedimentary Structures	163
Fossils	164
Perspective 7.1: Concretions, Geodes, and Thunder Eggs	166
Determining the Depositional Environment	168
Resources in Sediments and Sedimentary Rocks	169
Petroleum and Natural Gas	170
Uranium	171
Banded Iron Formation	171
Chapter Summary	171
Important Terms	172
Review Questions	172
Additional Readings	174
World Wide Web Activities	174
CD-ROM Exploration	175

## **Chapter 8**

<b>Metamorphism and Metamorphic Rocks</b>	<b>176</b>
Prologue	177
Introduction	179
Why Should You Study Metamorphic Rocks?	179
What Are the Agents of Metamorphism?	180
Heat	180
Pressure	180
Fluid Activity	181
What Are the Three Types of Metamorphism?	181
Contact Metamorphism	181
Perspective 8.1: Asbestos	182
Dynamic Metamorphism	185
Regional Metamorphism	185
How Are Metamorphic Rocks Classified?	187
Foliated Metamorphic Rocks	187
Nonfoliated Metamorphic Rocks	189
What Are Metamorphic Zones?	191
How Does Metamorphism Relate to Plate Tectonics?	192
Metamorphism and Natural Resources	192
Chapter Summary	193
Important Terms	194
Review Questions	194
Additional Readings	195
World Wide Web Activities	196
CD-ROM Exploration	197

## Chapter 9

### Earthquakes and Earth's Interior 198

Prologue	199
Introduction	200
Why Should You Study Earthquakes?	202
What Is the Elastic Rebound Theory?	202
What Is Seismology?	203
The Focus and Epicenter of an Earthquake	204
Where Do Earthquakes Occur, and How Often?	204
What Are Seismic Waves?	205
Body Waves	206
Surface Waves	207
How Is an Earthquake's Epicenter Located?	208
How Is the Size and Strength of an Earthquake Measured?	209
Intensity	210
Magnitude	210
What Are the Destructive Effects of Earthquakes?	211
Ground Shaking	212
Fire	213
Tsunami: Killer Waves	213
Perspective 9.1: Designing Earthquake-Resistant Structures	214
Ground Failure	216
Can Earthquakes Be Predicted?	216
Earthquake Precursors	218
Earthquake Prediction Programs	219
Can Earthquakes Be Controlled?	219
What Is Earth's Interior Like?	220
Perspective 9.2: Inside Earth	222
The Core	223
The Mantle	224
Seismic Tomography	225
The Crust	226
Earth's Internal Heat	226
Chapter Summary	227
Review Questions	228
Important Terms	229
Additional Readings	229
World Wide Web Activities	230
CD-ROM Exploration	231

## Chapter 10

### Deformation and Mountain Building 232

Prologue	233
Introduction	234
Why Should You Study Deformation and Mountain Building?	235
How Does Rock Deform?	236
Strike and Dip—Determining the Orientation of Rock Layers	237
Deformation and Geologic Structures	237
Folded Rock Layers	238
Joints	242
Faults	242
Deformation and the Origin of Mountains	247
Types of Mountains	247
Perspective 10.1: Geologic Maps—Their Construction and Uses	248
How Does Plate Tectonics Account for the Origin of Mountains?	250
Plate Boundaries and Mountain Building	251
Terranes and the Origin of Mountains	254
Earth's Continental Crust	256
Floating Continents?	256
The Principle of Isostasy	256
Isostatic Rebound	257
Chapter Summary	258
Important Terms	259
Review Questions	259
Additional Readings	260
World Wide Web Activities	261
CD-ROM Exploration	261

**Chapter 11**

<b>Mass Wasting</b>	<b>262</b>
Prologue	263
Introduction	264
Why Should You Study Mass Wasting?	264
What Factors Influence Mass Wasting?	264
Slope Angle	266
Weathering and Climate	266
Water Content	267
Vegetation	267
Perspective 11.1: The Tragedy at Aberfan, Wales	268
Overloading	269
Geology and Slope Stability	270
Triggering Mechanisms	270
What Are the Different Types of Mass Wasting?	271
Falls	271
Slides	272
Flows	274
Complex Movements	279
How Can We Recognize and Minimize the Effects of Mass Movements?	280
Chapter Summary	283
Important Terms	284
Review Questions	284
Additional Readings	285
World Wide Web Activities	285

**Chapter 12**

<b>Running Water</b>	<b>286</b>
Prologue	287
Introduction	289
Why Should You Study Running Water?	289
The Hydrologic Cycle	289
Perspective 12.1: Dams, Reservoirs, and Hydroelectric Power	290
Running Water	293
Sheet Flow and Channel Flow	293
Gradient, Velocity, and Discharge	293
How Does Running Water Erode and Transport Sediment?	295
Deposition by Running Water	295
The Deposits of Braided and Meandering Channels	297
Floodplain Deposits	298
Deltas	300
Alluvial Fans	301
Drainage Basins and Drainage Patterns	302
The Significance of Base Level	306
What Is a Graded Stream?	307
How Do Valleys Form and Evolve?	308
Stream Terraces	311
Incised Meanders	311
Chapter Summary	312
Important Terms	312
Review Questions	313
Additional Readings	314
World Wide Web Activities	314

## **Chapter 13**

### **Groundwater 316**

Prologue	317
Introduction	319
Why Should You Study Groundwater?	319
Groundwater and the Hydrologic Cycle	319
How Do Earth Materials Absorb Water?	319
What Is the Water Table?	320
How Does Groundwater Move?	321
What Are Springs, Water Wells, and Artesian Systems?	322
Springs	322
Water Wells	322
Artesian Systems	324
How Does Groundwater Erode and Deposit Material?	325
Sinkholes and Karst Topography	325
Caves and Cave Deposits	326
How Do Humans Impact the Groundwater System?	329
Lowering the Water Table	329
Saltwater Incursion	331
Subsidence	332
Groundwater Contamination	333
Groundwater Quality	333
Perspective 13.1: Arsenic and Old Lace	334
Hydrothermal Activity—What Is It, and Where Does It Occur?	336
Hot Springs	337
Geysers	337
Geothermal Energy	339
Chapter Summary	340
Important Terms	341
Review Questions	341
Additional Readings	342
World Wide Web Activities	342
CD-ROM Exploration	343

## **Chapter 14**

### **Glaciers and Glaciation 344**

Prologue	345
Introduction	346
Why Should You Study Glaciers and Glaciation?	347
Glaciers—Part of the Hydrologic Cycle	347
How Do Glaciers Form and Move?	348
What Kinds of Glacier Are There?	349
Valley Glaciers	349
Continental Glaciers	350
Accumulation and Wastage—The Glacial Budget	350
How Fast Do Glaciers Move?	350
Erosion and Transport by Glaciers	351
Erosion by Valley Glaciers	352
Perspective 14.1: Waterton Lakes and Glacier National Parks	356
Continental Glaciers and Erosional Landforms	358
Glacial Deposits	360
Landforms Composed of Till	361
Landforms Composed of Stratified Drift	362
Deposits in Glacial Lakes	364
What Causes Ice Ages?	366
The Milankovich Theory	367
Short-Term Climatic Events	368
Chapter Summary	368
Important Terms	369
Review Questions	369
Additional Readings	370
World Wide Web Activities	371

## **Chapter 15**

### **The Work of Wind and Deserts 372**

Prologue	373
Introduction	375
Why Should You Study Deserts?	375
How Does Wind Transport Sediment?	375
Bed Load	375
Suspended Load	376
How Does Wind Erode Landforms?	376
Abrasion	376
Deflation	378
What Are the Different Types of Wind Deposits?	378
The Formation and Migration of Dunes	378
Dune Types	378
Loess	382
How Are Air-Pressure Belts and Global Wind Patterns Distributed?	382
Where Do Deserts Occur?	383
What Are the Characteristics of Deserts?	384
Temperature and Vegetation	384
Weathering and Soils	385
Mass Wasting, Streams, and Groundwater	386
Wind	386
What Types of Landforms Are Found in Deserts?	386
Perspective 15.1: The Geologic History of Uluru and Kata Tjuta	390
Chapter Summary	392
Important Terms	392
Review Questions	393
Additional Readings	394
World Wide Web Activities	394
CD-ROM Exploration	395

## **Chapter 16**

### **The Seafloor, Shorelines, and Shoreline Processes 396**

Prologue	397
Introduction	399
Why Should You Study the Seafloor, Shorelines, and Shoreline Processes?	399
Exploration of the Oceans	399
What Features Are Found on the Seafloor?	399
Continental Margins	400
The Deep-Ocean Basin	402
Deep-Sea Sediments and Reefs	404
Shorelines and Shoreline Processes	406
Tides	406
Waves	407
Perspective 16.1: Energy from the Oceans	408
Nearshore Currents	411
Deposition Along Shorelines	412
Beaches	412
Spits, Baymouth Bars, and Tombolos	413
Barrier Islands	415
The Nearshore Sediment Budget	416
How Are Shorelines Eroded?	417
Wave-Cut Platforms and Associated Landforms	417
Types of Coasts	419
Depositional and Erosional Coasts	419
Submergent and Emergent Coasts	420
Resources from the Sea	421
Chapter Summary	422
Important Terms	423
Review Questions	423
Additional Readings	424
World Wide Web Activities	425
CD-ROM Exploration	425

## Chapter 17

### Geologic Time: Concepts and Principles

426

Prologue	427
Introduction	428
Why Should You Study Geologic Time?	429
How Has the Concept of Geologic Time and Earth's Age Changed Throughout Human History?	429
Perspective 17.1: Geologic Time and Climate Change	430
Why Are James Hutton's Contributions to Geology Important?	431
What Are Relative-Dating Methods?	431
Fundamental Principles of Relative Dating	431
Unconformities	434
How Do Geologists Correlate Rock Units?	438
What Are Absolute-Dating Methods?	439
Atoms, Elements, and Isotopes	439
Radioactive Decay and Half-Lives	439
Sources of Uncertainty	443
Perspective 17.2: Radon: The Silent Killer	440
Long-Lived Radioactive Isotope Pairs	445
Carbon 14 Dating Method	445
How Was the Geologic Time Scale Developed?	446
Chapter Summary	447
Important Terms	448
Review Questions	448
Additional Readings	449
World Wide Web Activities	450
CD-ROM Exploration	451

## Chapter 18

### Earth History

452

Prologue	453
Introduction	454
Why Should You Study Earth's Geologic History?	454
Precambrian Earth History	455
The Origin and Evolution of Continents	455
Shields, Platforms, and Cratons	455
Archean Earth History	456
Proterozoic Earth History	457
What Was the Paleozoic Geography of Earth?	458
Paleozoic Evolution of North America	463
The Sauk Sequence	463
The Tippecanoe Sequence	463
The Kaskaskia Sequence	464
The Absaroka Sequence	466
The History of Paleozoic Mobile Belts	470
The Appalachian Mobile Belt	470
The Cordilleran Mobile Belt	470
The Ouachita Mobile Belt	470
What Role Did Microplates Play in Forming Pangaea?	472
The Breakup of Pangaea	472
The Mesozoic History of North America	472
Eastern Coastal Region	474
Gulf Coastal Region	475
Western Region	476
Perspective 18.1: Petrified Forest National Park	479
Cenozoic Earth History	480
Cenozoic Plate Tectonics and Orogeny	480
The North American Cordillera	481
The Continental Interior and the Gulf Coastal Plain	482
Eastern North America	483
Pleistocene Glaciation	484
Mineral Resources	485
Chapter Summary	487
Important Terms	488
Review Questions	489
Additional Readings	490
World Wide Web Activities	491
CD-ROM Exploration	491

## **Chapter 19**

### **Life History**

**492**

Prologue	493
Introduction	494
Why Should You Study the History of Life?	495
Precambrian Life History	495
Paleozoic Life	497
Marine Invertebrates	497
The Permian Mass Extinction	499
Vertebrates	500
Plants	502
Mesozoic Life	502
Marine Invertebrates	504
The Diversification of Reptiles	504
Perspective 19.1: Dinosaur Behavior	506
Birds	510
Mammals	512
Plants	512
Cretaceous Mass Extinctions	513
Cenozoic Life History	514
Marine Invertebrates and Phytoplankton	514
Diversification of Mammals	514
Cenozoic Mammals	514
Pleistocene Faunas	515
Primate Evolution	516

Chapter Summary	519
Important Terms	520
Review Questions	521
Additional Readings	522
World Wide Web Activities	523

Appendix A: English—Metric Conversion Chart	A-1
Appendix B: Periodic Table of the Elements	A-2
Appendix C: Mineral Identification Tables	A-4
Appendix D: Topographic Maps	A-8
Answers: Multiple-Choice Review Questions	A-12
Glossary	G-1
Credits	C-1
Index	I-1
