

INTERNATIONAL EDITION

EXPERIMENTS IN PHYSICAL CHEMISTRY

Carl W. Garland
Joseph W. Nibler
David P. Shoemaker

SEVENTH EDITION

McGraw-Hill

<i>Preface</i>	<i>ix</i>
----------------	-----------

INTRODUCTION	1
---------------------	----------

Organization of the Book	2
Preparation for an Experiment	4
Execution of an Experiment	4
Safety	6
Recording of Experimental Data	7
Literature Work	9
Reports	10
Sample Report	13
Special Projects	26

II. TREATMENT OF EXPERIMENTAL DATA	29
---	-----------

A. Calculations and Presentation of Data	29
---	-----------

Significant Figures	30
Precision of Calculations	31
Analytical Methods	32
Numerical Methods	33
Graphs and Graphical Methods	34
Exercises	37

B. Uncertainties in Data and Results	38
---	-----------

Errors	38
Rejection of Discordant Data	42
Statistical Treatment of Random Errors	43
Propagation of Errors	52
Case History of an Error Evaluation	60
Fundamental Limitations on Instrumental Precision	62
Summary	64
Exercises	66

III. USE OF COMPUTER SOFTWARE	69
Word Processors	69
Spreadsheets	70
Symbolic Mathematics Programs	80
Quantum Mechanical Programs	83
Exercises	86
IV. GASES	89
1. Gas Thermometry	89
2. Joule-Thomson Effect	96
3. Heat-Capacity Ratios for Gases	104
V. TRANSPORT PROPERTIES OF GASES	117
Kinetic Theory of Transport Phenomena	117
4. Viscosity of Gases	126
5. Diffusion of Gases	134
VI. THERMOCHEMISTRY	145
Principles of Calorimetry	145
6. Heats of Combustion	152
7. Strain Energy of the Cyclopropane Ring	158
8. Heats of Ionic Reaction	167
VII. SOLUTIONS	172
9. Partial Molar Volume	172
10. Cryoscopic Determination of Molar Mass	179
11. Freezing-Point Depression of Strong and Weak Electrolytes	188
12. Chemical Equilibrium in Solution	193
VIII. PHASE EQUILIBRIA	199
13. Vapor Pressure of a Pure Liquid	199
14. Binary Liquid-Vapor Phase Diagram	208
15. Binary Solid-Liquid Phase Diagram	215
16. Liquid-Vapor Coexistence Curve and the Critical Point	222
IX. ELECTROCHEMISTRY	228
17. Conductance of Solutions	228
18. Temperature Dependence of emf	238
19. Activity Coefficients from Cell Measurements	241
X. CHEMICAL KINETICS	247
20. Method of Initial Rates: Iodine Clock	247
21. NMR Study of a Reversible Hydrolysis Reaction	256
22. Enzyme Kinetics: Inversion of Sucrose	264
23. Kinetics of the Decomposition of Benzenediazonium Ion	276
24. Gas-Phase Kinetics	280

XI. SURFACE PHENOMENA	292
25. Surface Tension of Solutions	292
26. Physical Adsorption of Gases	301
XII. MACROMOLECULES	311
27. Osmotic Pressure	311
28. Intrinsic Viscosity: Chain Linkage in Polyvinyl Alcohol	318
29. Helix-Coil Transition in Polypeptides	328
XIII. ELECTRIC AND MAGNETIC PROPERTIES	336
30. Dipole Moment of Polar Molecules in Solution	336
31. Dipole Moment of HCl Molecules in the Gas Phase	347
32. Magnetic Susceptibility	361
33. NMR Determination of Paramagnetic Susceptibility	371
XIV. SPECTROSCOPY	380
34. Absorption Spectrum of a Conjugated Dye	380
35. Raman Spectroscopy: Vibrational Spectrum of CCl ₄	385
36. Stimulated Raman Spectra of Benzene	394
37. Vibrational-Rotational Spectra of HCl and DCl	403
38. Vibrational-Rotational Spectra of Acetylenes	411
39. Absorption and Emission Spectra of I ₂	423
40. Fluorescence Lifetime and Quenching in I ₂ Vapor	433
41. Electron Spin Resonance Spectroscopy	441
42. NMR Determination of Keto-Enol Equilibrium Constants	453
43. NMR Study of Gas-Phase DCl-HBr Isotopic Exchange Reaction	462
44. Solid-State Lasers: Radiative Properties of Ruby Crystals	471
XV. SOLIDS	480
45. Determination of Crystal Structure by X-Ray Diffraction	480
46. Single-Crystal X-Ray Diffraction with the Buerger Precession Camera	495
47. Lattice Energy of Solid Argon	514
48. Statistical Thermodynamics of Iodine Sublimation	522
XVI. COMPUTER INTERFACING	537
Computer Data Types	538
Hardware	541
Software	543
Computer Programming	546
Interfacing with Experiments	549
XVII. ELECTRONIC DEVICES AND MEASUREMENTS	566
Circuit Elements	566
Semiconductor Devices	570
Operational Amplifiers	579
Analog-to-Digital Conversion	584
Digital Multimeters	587

Potentiometer Circuits	589
Wheatstone Bridge Circuits	591
Capacitance Measurements	593
Digital Electronics	596

XVIII. TEMPERATURE	600
---------------------------	------------

Temperature Scales	600
Triple-Point and Ice-Point Cell	604
Thermometers	605
Temperature Control	619

XIX. VACUUM TECHNIQUES	630
-------------------------------	------------

Introduction	630
Theoretical Background	630
Pumping Speed for a System	631
Desorption and Virtual Leaks	636
Pumps	637
Vacuum Gauges	644
Miscellaneous Vacuum Components	649
Design of Vacuum Lines	652
Leak Detection	653
Safety Considerations	655

XX. INSTRUMENTS	657
------------------------	------------

Balances	657
Barometers	661
Oscilloscopes	661
pH Meters	665
Polarimeters	667
Radiation Counters	669
Recorders, Plotters, and Printers	669
Refractometers	670
Signal-Averaging Devices	674
Spectroscopic Components	676
Spectroscopic Instruments	689
Timing Devices	696

XXI. MISCELLANEOUS PROCEDURES	699
--------------------------------------	------------

Volumetric Procedures	699
Purification Methods	704
Gas-Handling Procedures	705
Electrodes for Electrochemical Cells	711
Materials for Construction	712
Solders and Adhesives	718
Tubing Connections	721
Shopwork	722

XXII. LEAST-SQUARES FITTING PROCEDURES **724**

Introduction	724
Foundations of Least Squares	725
Weights	730
Rejection of Discordant Data	732
Goodness of Fit	733
Comparison of Models	737
Uncertainties in the Parameters	739
Summary of Procedures	741
Sample Least-Squares Calculation	742

APPENDICES **748**

A. Glossary of Symbols	748
B. International System of Units and Concentration Units	751
C. Safety	754
D. Literature Work	762
E. Research Journals	768
F. Numerical Methods of Analysis	770
G. Barometer Corrections	779

Index **781****Endpapers**

Physical Constants and Conversion Factors	front
Energy Conversion Table	front
Relative Atomic Masses of the Elements	back
