

INTRODUCTION TO CHEMICAL
ENGINEERING ANALYSIS
USING MATHEMATICA.

HENRY C. FOLEY

Contents

Preface for an Instructor	xiii
Preface for the Student	xxi
Acknowledgment	xxv
I. A Primer of Mathematica	1
1.1 Getting Started in Mathematica	1
1.2 Basics of the Language	1
1.3 Simple Commands	2
1.4 Table, Plot, Map, and Plot3D	3
1.5 Lists and ListPlot, Fit, and Show	30
1.6 Solve and NSolve	39
1.7 Differentiate and Integrate	43
1.8 DSolve	46
1.9 NDSolve	52
1.10 Units Interconversion	56
1.11 Summary	58

2. Elementary-Single-Component Systems	59
2.1 The Conservation of Mass Principle and the Concept of a Control Volume	59
<i>Filling a Vessel with a Pelletized Solid: Conservation of Mass and the Constitutive Relationship</i>	61
<i>Filling a Cylindrical Tank</i>	74
<i>Pressurizing an Initially Evacuated Tank with an Ideal Gas</i>	77
<i>Time-Dependent Flows</i>	82
2.2 Geometry and the Left-Hand Side of the Mass Balance Equation	87
<i>The Triangular Trough</i>	87
<i>The Conical Tank</i>	89
<i>The Semicylindrical Trough</i>	91
<i>The Spherical Tank</i>	98
<i>Depositing a Polymer Coating on a Disk</i>	103
2.3 Summary	112
3. The Draining Tank and Related Systems	113
3.1 The Right-Hand Side of the Mass Balance Equation	113
3.2 Mechanism of Water Flow from Tank— <i>Torricelli's Law, A Constitutive Relationship</i>	114
3.3 Experiment and the Constitutive Equation	116
3.4 Solving for Level as a Function of Time	124
3.5 Mass Input, Output, and Control	125
<i>Mass Input and Output</i>	125
3.6 Control	143
3.7 Summary	150
4. Multiple-Component Systems	151
4.1 The Concept of the Component Balance	151
4.2 Concentration versus Density	153
4.3 The Well-Mixed System	154
4.4 Multicomponent Systems	154
<i>Liquid and an Insoluble Solid</i>	154
4.5 Liquid and Soluble Solid	163
4.6 Washing a Salt Solution from a Vessel	175

4.7	The Pulse Input Tracer Experiment and Analysis	180
4.8	Mixing	187
4.9	Summary	203
5.	Multiple Phases—Mass Transfer	205
5.1	Mass Transfer versus Diffusion	206
5.2	Salt Dissolution	207
5.3	Batch	209
5.4	Fit to the Batch Data	214
5.5	Semicontinuous: Pseudo Steady State	218
5.6	Full Solution	220
5.7	Liquid-Liquid System	225
	<i>Fully Continuous</i>	225
5.8	Summary	248
6.	Adsorption and Permeation	249
6.1	Adsorption	249
	<i>Net Rate of Adsorption</i>	249
	<i>Semicontinuous Adsorption: Pseudo-Steady State</i>	258
6.2	Permeation	263
6.3	Permeation—Adsorption and Diffusion	263
6.4	Expanding Cell	282
6.5	Summary	296
7.	Reacting Systems—Kinetics and Batch Reactors	297
7.1	How Chemical Reactions Take Place	298
7.2	No-Flow / Batch System	301
7.3	Simple Irreversible Reactions—Zeroth to Nth Order	303
	<i>First-Order Kinetics</i>	303
	<i>Second-Order Kinetics Overall</i>	307
	<i>Nth Order</i>	314
7.4	Reversible Reactions—Chemical Equilibrium	317
7.5	Complex Reactions	328
	<i>Series</i>	328

<i>Series-Parallel Reactions</i>	340
<i>Langmuir-Hinshelwood-Hougen-Watson Kinetics</i>	341
<i>Microbial Population Dynamics</i>	357
7.6 Summary	360
8. Semi-Continuous Flow Reactors	363
8.1 Introduction to Flow Reactors	363
8.2 Semicontinuous Systems	365
<i>Fed-Batch Reactors</i>	365
8.3 Negligible Volume Change	366
8.4 Large Volume Change	373
8.5 Pseudo-Steady State	379
8.6 Summary	382
9. Continuous Stirred Tank and the Plug Flow Reactors	383
9.1 Continuous Flow-Stirred Tank Reactor	383
9.2 Steady-State CSTR with Higher-Order, Reversible Kinetics	387
9.3 Time Dependence—The Transient Approach to Steady-State and Saturation Kinetics	392
9.4 The Design of an Optimal CSTR	401
9.5 Plug Flow Reactor	407
9.6 Solution of the Steady-State PFR	410
9.7 Mixing Effects on Selectivities—Series and Series-Parallel with CSTR and RFR	418
9.8 PFR as a Series of CSTRs	424
9.9 Residence Time Distribution	435
9.10 Time-Dependent PFR—Complete and Numerical Solutions	451
9.11 Transient PFR	452
9.12 Equations, Initial Conditions, and Boundary Conditions	452
9.13 Summary	457
10. Worked Problems	459
10.1 The Level-Controlled Tank	459
<i>Introduction</i>	459
<i>Perturbation of the Inlet Flow Rate and Control</i>	460

<i>Integration Through and Beyond the Disturbance</i>	462
<i>Problem Statements</i>	462
<i>Solution to Part A</i>	463
<i>Solution to Part B</i>	464
<i>Solution to Part C—Graphs of $h_1[t]$, $h_2[t]$, $h_3[t]$</i>	465
10.2 Batch Competitive Adsorption	467
<i>Introduction</i>	467
<i>Adsorption/Desorption</i>	467
<i>Problem Statement</i>	469
<i>Solution</i>	470
10.3 A Problem in Complex Kinetics	474
<i>Introduction</i>	474
<i>Parallel and Series Reversible Reactions</i>	474
<i>Problem Statements</i>	474
<i>Solution</i>	475
10.4 Transient CSTR	478
<i>Time Independence</i>	478
<i>Time Dependence—The Transient Approach to Steady State</i>	479
<i>Complex Catalytic Kinetics</i>	479
<i>Transient Response of a CSTR with Catalytic Kinetics</i>	480
<i>Problem Statements</i>	481
<i>Solution</i>	481
10.5 CSTR-PFR—A Problem in Comparison and Synthesis	482
<i>Introduction</i>	482
<i>$A \rightarrow B \rightarrow D$ Network</i>	483
<i>Kinetics and the Objective</i>	484
<i>Problem Statements</i>	484
<i>CSTR Alone</i>	484
<i>PFR Alone</i>	485
10.6 Membrane Reactor—Overcoming Equilibrium with Simultaneous Separation	488
<i>Introduction</i>	488
<i>Reaction with Separation</i>	489
<i>Hydrogen-Selective Membranes</i>	489
<i>Problem Statements</i>	490
<i>Solution</i>	491

10.7	Microbial Population Dynamics	496
	<i>Introduction</i>	496
	<i>Microbes as Reactors</i>	497
	<i>Kinetics</i>	497
	<i>Problem Statements</i>	498
	<i>Solutions</i>	499
	Index	505
