Reservoir Stimulation

Third Edition

Michael J. Economides
Kenneth G. Nolte

Preface: Hydraulic Fracturing, A Technology for All Time

Ahmed S. Abou-Sayed P-1

Chapter 1 Reservoir Stimulation in Petroleum Production

Michael J. Economides and Curtis Boney

1-1.	Introduction	1-1
1-1.1.	Petroleum production	1-1
1-1.2.	Units	1-3
1-2.	Inflow performance	1-3
1-2.1.	IPR for steady state	1-4
1-2.2.	IPR for pseudosteady state	1-5
1-2.3.	IPR for transient (or infinite-acting) flow	1-5
1-2.4.	Horizontal well production	1-6
1-2.5.	Permeability anisotropy	1-10
1-3.	Alterations in the near-wellbore zone	1-11
1-3.1.	Skin analysis	1-11
1-3.2.	Components of the skin effect	1-12
1-3.3.	Skin effect caused by partial completion and slant	1-12
1-3.4.	Perforation skin effect	1-13
1-3.5.	Hydraulic fracturing in production engineering	1-16
1-4	Tubing performance and NODAL* analysis	1-18
1-5	Decision process for well stimulation	1-20
1-5.1.	Stimulation economics	1-21
1-5.2.	Physical limits to stimulation treatments	1-22
1-6.	Reservoir engineering considerations for optimal production enhancement strategies	1-22
1-6.1.	Geometry of the well drainage volume	1-23
1-6.2.	Well drainage volume characterizations and production optimization strategies ..	1-24
1-7.	Stimulation execution	1-28
1-7.1.	Matrix stimulation	1-28
1-7.2.	Hydraulic fracturing	1-18

Chapter 2 Formation Characterization: Well and Reservoir Testing

Christine A. Ehlig-Economides and Michael J. Economides

2-1.	Evolution of a technology	2-1
2-1.1.	Horner semilogarithmic analysis	2-1
2-1.2.	Log-log plot	2-2
2-2.	Pressure derivative in well test diagnosis	2-3
2-3.	Parameter estimation from pressure transient data	2-7
2-3.1.	Radial flow	2-7

2-3.2.	Linear flow	2-9
2-3.3.	Spherical flow	2-10
2-3.4.	Dual porosity	2-11
2-3.5.	Wellbore storage and pseudosteady state	2-11
2-4.	Test interpretation methodology	2-12
2-5.	Analysis with measurement of layer rate	2-14
2-6.	Layered reservoir testing	2-15
2-6.1.	Selective inflow performance analysis	2-15
2-6.2.	Analysis of multilayer transient test data	2-16
2-7.	Testing multilateral and multibranch wells	2-16
2-8.	Permeability determination from a fracture injection test	2-17
2-8.1.	Pressure decline analysis with the Carter leakoff model	2-17
2-8.2.	Filter-cake plus reservoir pressure drop leakoff model (according to Mayerhofer <i>et al.</i> , 1993)	2-21

Chapter 3 Formation Characterization: Rock Mechanics

M. C. Thiercelin and J.-C. Roegiers

3-1.	Introduction	3-1
	Sidebar 3A. Mechanics of hydraulic fracturing	3-2
3-2.	Basic concepts	3-4
3-2.1.	Stresses	3-4
3-2.2.	Strains	3-5
	Sidebar 3B. Mohr circle	3-5
3-3.	Rock behavior	3-6
3-3.1.	Linear elasticity	3-6
	Sidebar 3C. Elastic constants	3-8
3-3.2.	Influence of pore pressure	3-8
3-3.3.	Fracture mechanics	3-9
3-3.4.	Nonelastic deformation	3-11
3-3.5.	Failure	3-11
3-4.	Rock mechanical property measurement	3-12
3-4.1.	Importance of rock properties in stimulation	3-12
3-4.2.	Laboratory testing	3-13
3-4.3.	Stress-strain curve	3-14
3-4.4.	Elastic parameters	3-15
3-4.5.	Rock strength, yield criterion and failure envelope	3-19
3-4.6.	Fracture toughness	3-19
	Sidebar 3D. Fracture toughness testing	3-20
3-5.	State of stress in the earth	3-21
3-5.1.	Rock at rest	3-22
3-5.2.	Tectonic strains	3-23
3-5.3.	Rock at failure	3-23
3-5.4.	Influence of pore pressure	3-25
3-5.5.	Influence of temperature	3-26
3-5.6.	Principal stress direction	3-26
3-5.7.	Stress around the wellbore	3-26
3-5.8.	Stress change from hydraulic fracturing	3-27
3-6.	In-situ stress management	3-28
3-6.1.	Importance of stress measurement in stimulation	3-28

3-6.2.	Micro-hydraulic fracturing techniques	3-28
3-6.3.	Fracture calibration techniques	3-34
3-6.4.	Laboratory techniques	3-34

Chapter 4 Formation Characterization: Well Logs

Jean Desroches and Tom Bratton

4-1.	Introduction	4-1
4-2.	Depth	4-2
4-3.	Temperature	4-2
4-4.	Properties related to the diffusion of fluids	4-3
4-4.1.	Porosity	4-3
4-4.2.	Lithology and saturation	4-5
4-4.3.	Permeability	4-6
	Sidebar 4A. Permeability-porosity correlations	4-8
4-4.4.	Pore pressure	4-10
4-4.5.	Skin effect and damage radius	4-11
4-4.6.	Composition of fluids	4-12
4-5.	Properties related to the deformation and fracturing of rock	4-13
4-5.1.	Mechanical properties	4-13
4-5.2.	Stresses	4-15
4-6.	Zoning	4-24

Chapter 5 Basics of Hydraulic Fracturing

M. B. Smith and J. W. Shlyapobersky

5-1.	Introduction	5-1
5-1.1.	What is fracturing?	5-1
5-1.2.	Why fracture?	5-4
5-1.3.	Design considerations and primary variables	5-6
	Sidebar 5A. Design goals and variables	5-7
5-1.4.	Variable interaction	5-9
5-2.	In-situ stress	5-9
5-3.	Reservoir engineering	5-10
5-3.1.	Design goals	5-11
	Sidebar 5B. Highway analogy for dimensionless fracture conductivity	5-11
5-3.2.	Complicating factors	5-12
5-3.3.	Reservoir effects on fluid loss	5-13
5-4.	Rock and fluid mechanics	5-13
5-4.1.	Material balance	5-13
5-4.2.	Fracture height	5-14
5-4.3.	Fracture width	5-15
5-4.4.	Fluid mechanics and fluid flow	5-15
5-4.5.	Fracture mechanics and fracture tip effects	5-16
5-4.6.	Fluid loss	5-17
5-4.7.	Variable sensitivities and interactions	5-18
5-5.	Treatment pump scheduling	5-20
5-5.1.	Fluid and proppant selection	5-20
5-5.2.	Pad volume	5-21
5-5.3.	Proppant transport	5-23
5-5.4.	Proppant admittance	5-24

5-5.5.	Fracture models	5-25
5-6.	Economics and operational considerations	5-26
5-6.1.	Economics	5-26
5-6.2.	Operations	5-27

Appendix: Evolution of hydraulic fracturing design and evaluation

K. G. Nolte	A5-1
-------------------	------

Chapter 6 Mechanics of Hydraulic Fracturing

Mark G. Mack and Norman R. Warpinski

6-1.	Introduction	6-1
6-2.	History of early hydraulic fracture modeling	6-2
6-2.1.	Basic fracture modeling	6-2
6-2.2.	Hydraulic fracture modeling	6-3
	Sidebar 6A. Approximation to the Carter equation for leakoff	6-6
	Sidebar 6B. Approximations to Nordgren's equations	6-6
	Sidebar 6C. Radial fracture geometry models	6-8
6-3.	Three-dimensional and pseudo-three-dimensional models	6-8
	Sidebar 6D. Field determination of fracture geometry	6-10
6-3.1.	Planar three-dimensional models	6-11
	Sidebar 6E. Lateral coupling in pseudo-three-dimensional models	6-12
	Sidebar 6F. Momentum conservation equation for hydraulic fracturing	6-13
	Sidebar 6G. Momentum balance and constitutive equation for non-Newtonian fluids	6-14
6-3.2.	Cell-based pseudo-three-dimensional models	6-16
	Sidebar 6H. Stretching coordinate system and stability analysis	6-20
6-3.3.	Lumped pseudo-three-dimensional models	6-23
6-4.	Leakoff	6-25
6-4.1.	Filter cake	6-25
6-4.2.	Filtrate zone	6-26
6-4.3.	Reservoir zone	6-26
6-4.4.	Combined mechanisms	6-26
6-4.5.	General model of leakoff	6-27
6-4.6.	Other effects	6-27
6-5.	Proppant placement	6-28
6-5.1.	Effect of proppant on fracturing fluid rheology	6-28
6-5.2.	Convection	6-28
6-5.3.	Proppant transport	6-29
6-6.	Heat transfer models	6-29
6-6.1.	Historical heat transfer models	6-30
6-6.2.	Improved heat transfer models	6-30
6-7.	Fracture tip effects	6-30
	Sidebar 6I. Efficient heat transfer algorithm	6-31
	Sidebar 6J. Verification of efficient thermal calculations	6-32
6-7.1.	Linear elastic fracture mechanics	6-32
	Sidebar 6K. Crack tip stresses and the Rice equation	6-33
6-7.2.	Extensions to LEFM	6-34
6-7.3.	Field calibration	6-35
6-8.	Tortuosity and other near-well effects	6-36
6-8.1.	Fracture geometry around a wellbore	6-36

6-8.2.	Perforation and deviation effects	6-36
6-8.3.	Perforation friction	6-37
6-8.4.	Tortuosity	6-37
6-8.5.	Phasing misalignment	6-38
6-9.	Acid fracturing	6-40
6-9.1.	Historical acid fracturing models	6-40
6-9.2.	Reaction stoichiometry	6-40
6-9.3.	Acid fracture conductivity	6-41
6-9.4.	Energy balance during acid fracturing	6-42
6-9.5.	Reaction kinetics	6-42
6-9.6.	Mass transfer	6-42
6-9.7.	Acid reaction model	6-43
6-9.8.	Acid fracturing: fracture geometry model	6-43
6-10.	Multilayer fracturing	6-44
6-11.	Pump schedule generation	6-46
	Sidebar 6L. Approximate proppant schedules	6-47
6-12.	Pressure history matching	6-48
	Sidebar 6M. Theory and method of pressure inversion	6-48

Chapter 7 Fracturing Fluid Chemistry and Proppants

Janet Gulbis and Richard M. Hodge

7-1.	Introduction	7-1
7-2.	Water-base fluids	7-1
7-3.	Oil-base fluids	7-6
7-4.	Acid-based fluids	7-7
7-4.1.	Materials and techniques for acid fluid-loss control	7-7
7-4.2.	Materials and techniques for acid reaction-rate control	7-8
7-5.	Multiphase fluids	7-8
7-5.1.	Foams	7-9
7-5.2.	Emulsions	7-9
7-6.	Additives	7-10
7-6.1.	Crosslinkers	7-10
	Sidebar 7A. Ensuring optimum crosslinker performance	7-13
7-6.2.	Breakers	7-14
	Sidebar 7B. Breaker selection	7-16
7-6.3.	Fluid-loss additives	7-16
7-6.4.	Bactericides	7-18
7-6.5.	Stabilizers	7-18
7-6.6.	Surfactants	7-19
7-6.7.	Clay stabilizers	7-19
7-7.	Proppants	7-19
7-7.1.	Physical properties of proppants	7-19
7-7.2.	Classes of proppants	7-21
	Sidebar 7C. Minimizing the effects of resin-coated proppants	7-22
7-8.	Execution	7-22
7-8.1.	Mixing	7-22
7-8.2.	Quality assurance	7-23
	Acknowledgments	7-23

Chapter 8 Performance of Fracturing Materials

Vernon G. Constien, George W. Hawkins, R. K. Prud'homme and Reinaldo Navarrete

8-1.	Introduction	8-1
8-2.	Fracturing fluid characterization	8-1
8-3.	Characterization basics	8-2
8-4.	Translation of field conditions to a laboratory environment	8-2
8-5.	Molecular characterization of gelling agents	8-2
8-5.1.	Correlations of molecular weight and viscosity	8-2
8-5.2.	Concentration and chain overlap	8-3
8-5.3.	Molecular weight distribution	8-4
8-5.4.	Characterization of insoluble components	8-5
8-5.5.	Reaction sites and kinetics of crosslinking	8-5
8-6.	Rheology	8-6
8-6.1.	Basic flow relations	8-7
8-6.2.	Power law model	8-7
8-6.3.	Models that more fully describe fluid behavior	8-8
8-6.4.	Determination of fracturing fluid rheology	8-10
8-6.5.	Rheology of foam and emulsion fluids	8-12
8-6.6.	Effect of viscometer geometry on fluid viscosity	8-15
8-6.7.	Characterization of fluid microstructure using dynamic oscillatory measurements	8-16
8-6.8.	Relaxation time and slip	8-17
8-6.9.	Slurry rheology	8-17
8-7.	Proppant effects	8-19
8-7.1.	Characterization of proppant transport properties	8-19
8-7.2.	Particle migration and concentration	8-21
8-8.	Fluid loss	8-22
8-8.1.	Fluid loss under static conditions	8-23
8-8.2.	Fluid loss under dynamic conditions	8-24
8-8.3.	Shear rate in the fracture and its influence on fluid loss	8-25
8-8.4.	Influence of permeability and core length	8-26
8-8.5.	Differential pressure effects	8-26

Chapter 9 Fracture Evaluation Using Pressure Diagnostics

Sunil N. Gulrajani and K. G. Nolte

9-1.	Introduction	9-1
9-2.	Background	9-2
9-3.	Fundamental principles of hydraulic fracturing	9-3
9-3.1.	Fluid flow in the fracture	9-3
9-3.2.	Material balance or conservation of mass	9-4
9-3.3.	Rock elastic deformation	9-4
	Sidebar 9A. What is closure pressure?	9-6
	Sidebar 9B. Pressure response of toughness-dominated fractures	9-9
9-4.	Pressure during pumping	9-10
9-4.1.	Time variation for limiting fluid efficiencies	9-12
9-4.2.	Inference of fracture geometry from pressure	9-12
9-4.3.	Diagnosis of periods of controlled fracture height growth	9-14
9-4.4.	Examples of injection pressure analysis	9-15
	Sidebar 9C. Pressure derivative analysis for diagnosing pumping pressure	9-16
9-4.5.	Diagnostics for nonideal fracture propagation	9-18

	Sidebar 9D. Fluid leakoff in natural fissures	9-23
9-4.6.	Formation pressure capacity	9-24
9-4.7.	Pressure response after a screenout	9-27
9-4.8.	Fracture diagnostics from log-log plot slopes	9-28
9-4.9.	Near-wellbore effects	9-30
	Sidebar 9E. Rate step-down test analysis—a diagnostic for fracture entry	9-32
9-5.	Analysis during fracture closure	9-34
9-5.1.	Fluid efficiency	9-34
9-5.2.	Basic pressure decline analysis	9-37
9-5.3.	Decline analysis during nonideal conditions	9-38
9-5.4.	Generalized pressure decline analysis	9-42
	Sidebar 9F. G-function derivative analysis	9-43
9-6.	Pressure interpretation after fracture closure	9-45
9-6.1.	Why linear and radial flow after fracture closure?	9-46
9-6.2.	Linear, transitional and radial flow pressure responses	9-48
	Sidebar 9G. Impulse testing	9-49
9-6.3.	Mini-falloff test	9-50
9-6.4.	Integration of after-closure and preclosure analyses	9-50
9-6.5.	Physical and mathematical descriptions	9-51
9-6.6.	Influence of spurt loss	9-53
9-6.7.	Consistent after-closure diagnostic framework	9-54
9-6.8.	Application of after-closure analysis.	9-56
9-6.9.	Field example	9-57
9-7.	Numerical simulation of pressure: combined analysis of pumping and closing	9-59
9-7.1.	Pressure matching	9-60
9-7.2.	Nonuniqueness	9-60
9-8.	Comprehensive calibration test sequence.	9-61

Appendix: Background for hydraulic fracturing pressure analysis techniques

Sunil N. Gulrajani and K. G. Nolte	A9-1
--	------

Chapter 10 Fracture Treatment Design

Jack Elbel and Larry Britt

10-1.	Introduction	10-1
	Sidebar 10A. NPV for fixed costs or designated proppant mass	10-2
10-2.	Design considerations	10-3
10-2.1.	Economic optimization	10-3
10-2.2.	Treatment optimization design procedure	10-3
10-2.3.	Fracture conductivity	10-4
10-2.4.	Dimensionless fracture conductivity	10-6
10-2.5.	Non-Darcy effects	10-8
10-2.6.	Proppant selection	10-8
10-2.7.	Treatment size	10-9
10-2.8.	Fluid loss	10-10
10-2.9.	Viscosity effects	10-11
	Sidebar 10B. Fluid exposure time	10-12
10-2.10.	Injection rate	10-13
10-3.	Geometry modeling	10-14
	Sidebar 10C. Geometry models	10-14
10-3.1.	Model selection	10-15

10-3.2.	Sources of formation parameters	10-16
	Sidebar 10D. In-situ stress correlation with lithology	10-16
10-4.	Treatment schedule	10-17
	Sidebar 10E. Fracturing economics sensitivity to formation permeability and skin effect	10-17
10-4.1.	Normal proppant scheduling	10-18
10-4.2.	Tip screenout	10-21
10-5.	Multilayer fracturing	10-24
10-5.1.	Limited entry	10-24
10-5.2.	Interval grouping	10-25
10-5.3.	Single fracture across multilayers	10-25
10-5.4.	Two fractures in a multilayer reservoir	10-26
10-5.5.	Field example	10-28
	Sidebar 10F. Fracture evaluation in multilayer zones	10-28
10-6.	Acid fracturing	10-30
10-6.1.	Acid-etched fracture conductivity	10-31
	Sidebar 10G. Acid-etched conductivity	10-32
10-6.2.	Acid fluid loss	10-33
	Sidebar 10H. Fluid-loss control in wormholes	10-34
10-6.3.	Acid reaction rate	10-35
10-6.4.	Acid fracturing models	10-36
10-6.5.	Parameter sensitivity	10-36
10-6.6.	Formation reactivity properties	10-41
10-6.7.	Propped or acid fracture decision	10-41
10-7.	Deviated wellbore fracturing	10-42
10-7.1.	Reservoir considerations	10-43
10-7.2.	Fracture spacing	10-45
10-7.3.	Convergent flow	10-45
10-7.4.	Fracturing execution in deviated and horizontal wells	10-47
10-7.5.	Horizontal well example	10-49

Chapter 11 Fracturing Operations

J. E. Brown, R. W. Thrasher and L. A. Behrmann

11-1.	Introduction	11-1
11-2.	Completions	11-1
11-2.1.	Deviated and S-shaped completions	11-1
11-2.2.	Horizontal and multilateral completions	11-2
11-2.3.	Slimhole and monobore completions	11-2
11-2.4.	Zonal isolation	11-2
	Sidebar 11A. Factors influencing cement bond integrity	11-3
	Sidebar 11B. Coiled tubing-conveyed fracture treatments	11-6
11-3.	Perforating	11-8
11-3.1.	Background	11-8
	Sidebar 11C. Estimating multizone injection profiles during hydraulic fracturing	11-9
	Sidebar 11D. Propagating a microannulus during formation breakdown	11-11
11-3.2.	Perforation phasing for hard-rock hydraulic fracturing	11-11
11-3.3.	Other perforating considerations for fracturing	11-14
11-3.4.	Frac and packs and high-rate water packs	11-16
11-3.5.	Fracturing for sand control without gravel-pack screens	11-16
	Sidebar 11E. Calculation of minimum shot density for fracture stimulation	11-17
11-3.6.	Extreme overbalance stimulation	11-18

11-3.7.	Well and fracture connectivity	11-18
11-4.	Surface equipment for fracturing operations	11-19
11-4.1.	Wellhead isolation	11-19
11-4.2.	Treating iron	11-19
11-4.3.	High-pressure pumps	11-22
11-4.4.	Blending equipment	11-23
11-4.5.	Proppant storage and delivery	11-23
11-4.6.	Vital signs from sensors	11-24
11-4.7.	Equipment placement	11-26
11-5.	Bottomhole pressure measurement and analysis	11-26
11-6.	Proppant flowback control	11-29
11-6.1.	Forced closure	11-30
11-6.2.	Resin flush	11-30
11-6.3.	Resin-coated proppants	11-30
11-6.4.	Fiber technology	11-30
11-7.	Flowback strategies	11-30
	Sidebar 11F. Fiber technology	11-31
11-8.	Quality assurance and quality control	11-32
11-9.	Health, safety and environment	11-32
11-9.1.	Safety considerations	11-32
11-9.2.	Environmental considerations	11-33

Appendix: Understanding perforator penetration and flow performance

Phillip M. Halleck	A11-1
------------------------------	-------

Chapter 12 Post-Treatment Evaluation and Fractured Well Performance

B. D. Poe, Jr., and Michael J. Economides

12-1.	Introduction	12-1
12-1.1.	Fracture mapping techniques	12-1
12-1.2.	Pressure transient analysis	12-6
12-2.	Post-treatment fracture evaluation	12-10
12-2.1.	Wellbore storage dominated flow regime	12-11
12-2.2.	Fracture storage linear flow regime	12-11
12-2.3.	Bilinear flow regime	12-11
12-2.4.	Formation linear flow regime	12-13
12-2.5.	Pseudoradial flow regime	12-14
12-2.6.	Pseudosteady-state flow regime	12-15
12-3.	Factors affecting fractured well performance:	12-16
12-3.1.	Non-Darcy flow behavior	12-16
12-3.2.	Nonlinear fluid properties	12-20
12-3.3.	Fracture damage and spatially varying fracture properties	12-21
12-3.4.	Damage in high-permeability fracturing	12-25
12-3.5.	Heterogeneous systems	12-26
12-4.	Well test analysis of vertically fractured wells	12-27
12-4.1.	Wellbore storage dominated flow analysis	12-28
12-4.2.	Fracture storage linear flow analysis	12-28
12-4.3.	Bilinear flow analysis	12-29
12-4.4.	Formation linear flow analysis	12-29
12-4.5.	Pseudoradial flow analysis	12-29
12-4.6.	Well test design considerations	12-30

12-4.7. Example well test analyses	12-31
12-5. Prediction of fractured well performance.	12-39

Chapter 13 Introduction to Matrix Treatments

R. L. Thomas and L. N. Morgenthaler

13-1. Introduction	13-1
13-1.1. Candidate selection	13-1
Sidebar 13A. The history of matrix stimulation	13-2
13-1.2. Formation damage characterization	13-3
13-1.3. Stimulation technique determination	13-3
13-1.4. Fluid and additive selection	13-3
13-1.5. Pumping schedule generation and simulation	13-3
13-1.6. Economic evaluation	13-4
13-1.7. Execution	13-4
13-1.8. Evaluation	13-4
13-2. Candidate selection	13-4
13-2.1. Identifying low-productivity wells and stimulation candidates	13-4
Sidebar 13B. Candidate selection field case history	13-6
13-2.2. Impact of formation damage on productivity	13-6
13-2.3. Preliminary economic evaluation	13-7
13-3. Formation damage characterization	13-8
Sidebar 13C. Formation damage characterization field case history	13-9
Sidebar 13D. Fluid and additive selection field case history	13-10
13-4. Stimulation technique determination	13-10
13-5. Treatment design.	13-11
13-5.1. Matrix stimulation techniques	13-11
13-5.2. Treatment fluid selection	13-12
13-5.3. Pumping schedule generation and simulation	13-19
Sidebar 13E. Placement study case histories.	13-29
13-6. Final economic evaluation	13-32
13-7. Execution	13-32
13-7.1. Quality control	13-32
13-7.2. Data collection	13-34
13-8. Treatment evaluation	13-35
13-8.1. Pretreatment evaluation	13-35
13-8.2. Real-time evaluation	13-35
13-8.3. Post-treatment evaluation.	13-37

Chapter 14 Formation Damage: Origin, Diagnosis and Treatment Strategy

Donald G. Hill, Olivier M. Liétard, Bernard M. Piot and George E. King

14-1. Introduction	14-1
14-2. Damage characterization.	14-1
14-2.1. Pseudodamage	14-2
14-2.2. Pseudoskin effects and well completion and configuration	14-3
14-3. Formation damage descriptions	14-4
14-3.1. Fines migration	14-4
14-3.2. Swelling clays	14-6
14-3.3. Scales.	14-6
14-3.4. Organic deposits	14-7
14-3.5. Mixed deposits	14-8

	14-3.6. Emulsions	14-9
	14-3.7. Induced particle plugging	14-9
	14-3.8. Wettability alteration	14-10
	14-3.9. Acid reactions and acid reaction by-products	14-11
	14-3.10. Bacteria	14-11
	14-3.11. Water blocks	14-12
	14-3.12. Oil-base drilling fluids	14-13
14-4	Origins of formation damage.	14-13
	14-4.1. Drilling	14-13
	14-4.2. Cementing	14-21
	14-4.3. Perforating	14-21
	14-4.4. Gravel packing.	14-22
	14-4.5. Workovers	14-22
	14-4.6. Stimulation and remedial treatments.	14-23
	14-4.7. Normal production or injection operations	14-24
14-5.	Laboratory identification and treatment selection	14-26
	14-5.1. Damage identification	14-26
	14-5.2. Treatment selection	14-28
14-6.	Treatment strategies and concerns.	14-31
	14-6.1. Fines and clays.	14-33
	14-6.2. Scales.	14-34
	14-6.3. Organic deposits	14-35
	14-6.4. Mixed deposits	14-35
	14-6.5. Emulsions	14-36
	14-6.6. Bacteria	14-36
	14-6.7. Induced particle plugging.	14-36
	14-6.8. Oil-base drilling fluids	14-37
	14-6.9. Water blocks	14-37
	14-6.10. Wettability alteration	14-38
	14-6.11. Wellbore damage	14-38
14-7.	Conclusions	14-39

Chapter 15 Additives in Acidizing Fluids

Syed A. Ali and Jerald J. Hinkel

15-1.	Introduction.	15-1
15-2.	Corrosion inhibitors	15-2
	15-2.1. Corrosion of metals	15-2
	15-2.2. Acid corrosion on steel.	15-2
	15-2.3. Pitting types of acid corrosion	15-3
	15-2.4. Hydrogen embrittlement.	15-3
	15-2.5. Corrosion by different acid types	15-3
	15-2.6. Inhibitor types	15-4
	15-2.7. Compatibility with other additives	15-4
	15-2.8. Laboratory evaluation of inhibitors	15-5
	15-2.9. Suggestions for inhibitor selection	15-5
15-3.	Surfactants	15-5
	15-3.1. Anionic surfactants	15-6
	15-3.2. Cationic surfactants	15-6
	15-3.3. Nonionic surfactants	15-6
	15-3.4. Amphoteric surfactants	15-7

15-3.5.	Fluorocarbon surfactants	15-7
15-3.6.	Properties affected by surfactants	15-7
15-3.7.	Applications and types of surfactants	15-9
15-4.	Clay stabilizers	15-11
15-4.1.	Highly charged cations	15-11
15-4.2.	Quaternary surfactants	15-12
15-4.3.	Polyamines	15-12
15-4.4.	Polyquaternary amines	15-12
15-4.5.	Organosilane	15-13
15-5.	Mutual solvents	15-13
15-5.1.	Adsorption of mutual solvents	15-14
15-5.2.	Chlorination of mutual solvents	15-14
15-6.	Iron control additives	15-14
15-6.1.	Sources of iron	15-14
15-6.2.	Methods of iron control	15-15
15-7.	Alcohols	15-16
15-8.	Acetic acid	15-18
15-9.	Organic dispersants	15-18
15-10.	Organic solvents	15-18
15-11.	Diversion	15-18
15-12.	Additive compatibility	15-19
15-13.	Facility upsets following acid stimulation	15-19
15-13.1.	Discharge requirements	15-19
15-13.2.	Prevention of facility upsets	15-20

Chapter 16 Fundamentals of Acid Stimulation

A. Daniel Hill and Robert S. Schechter

16-1.	Introduction	16-1
16-2.	Acid-mineral interactions	16-2
16-2.1.	Acid-mineral reaction stoichiometry	16-2
16-2.2.	Acid-mineral reaction kinetics	16-4
	Sidebar 16A. Calculating minimum acid volume using dissolving power	16-5
	Sidebar 16B. Relative reaction rates of sandstone minerals	16-8
16-2.3.	Precipitation of reaction products	16-10
	Sidebar 16C. Geochemical model predictions	16-11
16-3.	Sandstone acidizing	16-13
16-3.1.	Introduction	16-13
16-3.2.	Acid selection	16-13
16-3.3.	Sandstone acidizing models	16-13
	Sidebar 16D. Comparison of acid volumes for radial and perforation flow	16-16
16-3.4.	Permeability response	16-19
16-4.	Carbonate acidizing	16-19
16-4.1.	Distinctive features	16-19
16-4.2.	Wormholes	16-20
16-4.3.	Initiation of wormholes	16-21
16-4.4.	Acidizing experiments	16-23
	Sidebar 16E. Optimum injection rate for initiating carbonate treatment	16-26
16-4.5.	Propagation of wormholes	16-27

Appendix: Advances in understanding and predicting wormhole formation

Christopher N. Fredd A16-1

Chapter 17 Carbonate Acidizing Design

J. A. Robert and C. W. Crowe

17-1.	Introduction	17-1
17-2.	Rock and damage characteristics in carbonate formations	17-1
	17-2.1. Rock characteristics	17-1
	17-2.2. Damage characteristics	17-2
17-3.	Carbonate acidizing with hydrochloric acid	17-2
	17-3.1. Introduction	17-2
	17-3.2. Historical background	17-2
	17-3.3. Reactivity of carbonate minerals with hydrochloric acid	17-3
	17-3.4. Acidizing physics	17-4
	Sidebar 17A. Wormhole initiation and propagation	17-6
	17-3.5. Application to field design	17-7
	Sidebar 17B. Acidizing case study	17-8
17-4.	Other formulations	17-9
	17-4.1. Organic acids	17-9
	17-4.2. Gelled acids	17-10
	17-4.3. Emulsions	17-11
	17-4.4. Microemulsions	17-11
	17-4.5. Special treatments	17-12
	17-4.6. Self-diverting acid	17-12
	Sidebar 17C. Examples of special treatments	17-13
	Sidebar 17D. Placement using self-diverting acid	17-13
17-5.	Treatment design	17-14
	17-5.1. Candidate selection	17-14
	17-5.2. Pumping schedule	17-14
	17-5.3. Additives	17-14
	17-5.4. Placement	17-14
17-6.	Conclusions	17-14
	Acknowledgments	17-15

Chapter 18 Sandstone Acidizing

Harry O. McLeod and William David Norman

18-1.	Introduction	18-1
18-2.	Treating fluids	18-1
	18-2.1. Hydrochloric acid chemistry	18-2
	18-2.2. Chemistry of hydrofluoric acid systems	18-2
18-3.	Solubility of by-products	18-4
	18-3.1. Calcium fluoride	18-5
	18-3.2. Alkali fluosilicates and fluoaluminates	18-5
	18-3.3. Aluminum fluoride and hydroxide	18-5
	18-3.4. Ferric complexes	18-5
18-4.	Kinetics: factors affecting reaction rates	18-6
	18-4.1. Hydrofluoric acid concentration	18-6
	18-4.2. Hydrochloric acid concentration	18-6
	18-4.3. Temperature	18-7

18-4.4.	Mineralogical composition and accessible surface area	18-7
18-4.5.	Pressure	18-7
18-5.	Hydrofluoric acid reaction modeling	18-7
18-6.	Other acidizing formulations	18-8
18-6.1.	Fluoboric acid	18-8
18-6.2.	Sequential mud acid	18-10
18-6.3.	Alcoholic mud acid	18-11
18-6.4.	Mud acid plus aluminum chloride for retardation	18-11
18-6.5.	Organic mud acid	18-11
18-6.6.	Self-generating mud acid systems	18-12
18-6.7.	Buffer-regulated hydrofluoric acid systems	18-12
18-7.	Damage removal mechanisms	18-12
18-7.1.	Formation response to acid	18-13
18-7.2.	Formation properties	18-13
18-7.3.	Formation brine compatibility	18-13
18-7.4.	Crude oil compatibility	18-14
18-7.5.	Formation mineral compatibility with fluid systems	18-14
18-7.6.	Acid type and concentration	18-16
18-8.	Methods of controlling precipitates	18-18
18-8.1.	Preflush	18-18
18-8.2.	Mud acid volume and concentration	18-18
18-8.3.	Postflush or overflush	18-18
18-9.	Acid treatment design considerations	18-19
18-9.1.	Selection of fluid sequence stages	18-20
18-9.2.	Typical sandstone acid job stages	18-20
18-9.3.	Tubing pickle	18-20
18-9.4.	Preflushes	18-20
18-9.5.	Main fluid stage	18-21
18-9.6.	Overflush stage	18-21
18-9.7.	Diversion techniques	18-22
18-9.8.	Typical sandstone acid job stages	18-22
18-10.	Matrix acidizing design guidelines	18-23
18-10.1.	Calculations	18-24
18-10.2.	Flowback and cleanup techniques	18-25
18-11.	Acid treatment evaluation	18-26
18-12.	Conclusions	18-27

Chapter 19 Fluid Placement and Pumping Strategy

J. A. Robert and W. R. Rossen

19-1.	Introduction	19-1
19-2.	Choice of pumping strategy	19-1
19-2.1.	Importance of proper placement	19-1
19-2.2.	Comparison of diversion methods	19-2
19-2.3.	Fluid placement versus injection rate	19-3
19-2.4.	MAPDIR method	19-3
19-3.	Chemical diverter techniques	19-4
19-3.1.	Historical background	19-4
19-3.2.	Diverting agent properties	19-4
19-3.3.	Classification of diverting agents	19-4
19-3.4.	Potential problems during diversion treatment	19-5

19-3.5. Laboratory characterization	19-6
19-3.6. Modeling diverter effects	19-7
19-3.7. Field design	19-9
19-4. Foam diversion	19-10
19-4.1. Historical background	19-10
19-4.2. Foam mechanisms	19-10
19-4.3. Foam behavior in porous media	19-12
19-4.4. Foam diversion experiments	19-14
19-4.5. Modeling and predicting foam diversion	19-15
19-4.6. Application to field design	19-16
19-5. Ball sealers	19-18
19-6. Mechanical tools	19-19
19-7. Horizontal wells	19-20
19-7.1. Optimal treatment	19-20
19-7.2. Placement techniques	19-22
19-8. Conclusions	19-23
Acknowledgments	19-24

Chapter 20 Matrix Stimulation Treatment Evaluation

Carl T. Montgomery and Michael J. Economides

20-1. Introduction	20-1
20-2. Derivation of bottomhole parameters from wellhead measurements	20-1
20-3. Monitoring skin effect evolution during treatment	20-1
20-3.1. McLeod and Coulter technique	20-1
20-3.2. Paccaloni technique	20-2
20-4. Prouvost and Economides method	20-4
20-4.1. Deriving skin effect during treatment	20-4
20-4.2. Determining reservoir characteristics before treatment	20-4
20-5. Behenna method	20-5
20-6. Inverse injectivity diagnostic plot	20-5
20-7. Limitations of matrix treatment evaluation techniques	20-5
Sidebar 20A. Example calculation of the Prouvost and Economides method	20-6
Sidebar 20B. Example application of the Hill and Zhu method	20-7
20-8. Treatment response diagnosis	20-8
Sidebar 20C. Production indications for matrix stimulation requirements	20-10
20-9. Post-treatment evaluation	20-11
20-9.1. Return fluid analysis	20-11
20-9.2. Tracer surveys	20-11
20-10. Conclusions	20-12
