

Radioisotopes in Biology

Second Edition

Edited by
Robert J. Slater

**PRACTICAL
APPROACH**

Contents

Preface page v
Protocol list xv
Abbreviations xix

1 Introduction 1

Robert J. Slater

- 1 The decision to use a radioisotope 1
- 2 Laboratory facilities 1
- 3 The choice of a labelled compound 1
 - The choice of a radionuclide 2
 - Labelling position 2
 - Specific activity 3
 - The isotope effect 4
- 4 Storage and purity 4
- 5 Experimental design 5

2 Radioisotope use 7

David Prime and Barry Frith

- 1 Introduction 7
- 2 Radioactivity 7
 - Radioactive decay 7
 - Units of radioactivity 10
 - Properties of radiations 10
 - Radiation dose and equivalent dose 11
 - External radiation doses from beta emitters 11
 - External radiation doses from X-rays and gamma rays 12
 - Internal radiation doses from radionuclides 13
- 3 Biological effects of radiation and the basis of legislation 14
 - Effective dose 14
 - Tissue level effects 14
 - Carcinogenic effects 15
 - Genetic effects 15
- 4 Biological basis of dose limits 16
 - Risk rates for biological effects 16

CONTENTS

| | | |
|----------|---|-----------|
| 5 | Working with unsealed sources | 18 |
| | Getting started | 18 |
| | Designation of working areas | 19 |
| 6 | Designation of 'classified workers' | 20 |
| 7 | Controlling the risks to radiation workers | 20 |
| | The non-classified worker | 20 |
| | The classified worker | 21 |
| 8 | The tracer study | 21 |
| | Experimental design | 21 |
| | The purchase of isotopes and labelled compounds | 23 |
| | Receiving the isotope | 23 |
| | Isotope manipulations | 23 |
| | Design of isotope laboratory | 24 |
| 9 | Personal protection in the radioisotope laboratory | 24 |
| 10 | Routine monitoring of area | 25 |
| | External dose measurement | 25 |
| | Measurement of air contamination | 25 |
| | Measurement of surface contamination | 26 |
| | Estimation of individual dose | 26 |
| 11 | Transport of radioactive material | 26 |
| | Requirements and controls for transport of excepted packages | 27 |
| 12 | Disposal of radioactive waste | 28 |
| | Solid waste | 29 |
| | Liquid low-level waste (aqueous and approved liquid scintillation cocktails) | 29 |
| | References | 30 |
| 3 | Risk assessments for the use of radioisotopes in biology | 31 |
| | <i>Peter E. Ballance</i> | |
| 1 | Introduction | 31 |
| 2 | The Health and Safety at Work etc. Act 1974 | 32 |
| 3 | The Management of Health and Safety at Work Regulations 1999 | 33 |
| 4 | The risk assessment process | 35 |
| | The content of the risk assessment | 35 |
| | Responsibility for making risk assessments | 36 |
| 5 | Suggested methods for making risk assessments | 37 |
| | General laboratory hazards | 37 |
| | Use of generic risk assessments in biological research and teaching | 38 |
| 6 | Hazards and risks to health from the use of radioactive substances and ionizing radiation | 46 |
| 7 | Special hazard and risk assessment for ^{125}I | 48 |
| | The hazard | 48 |
| | Risks to health and radiation protection procedures to be followed | 48 |
| | Elimination of the hazard | 50 |
| 8 | Special hazard and risk assessment for DNA labelling/sequencing work with ^{32}P | 50 |
| | Minimizing uptakes | 50 |
| | Assessment of risks and control of external radiation from ^{32}P | 51 |
| 9 | Risk assessments for gamma-emitting radionuclides | 55 |

- 10 Risk assessments for environmental protection 57
- 11 Risks to the health of biological research workers in relation to other risks 58
- References 60

4 Radioisotope detection using X-ray film 63

Ron A. Laskey

- 1 Introduction 63
- 2 Choosing a class of detection method: autoradiography versus fluorography or intensifying screens 64
 - Direct autoradiography gives high resolution but limited sensitivity 64
 - Fluorography increases sensitivity for weak β emitters 64
 - Intensifying screens increase sensitivity for high-energy β particles or γ rays 65
- 3 Direct autoradiography 66
 - Procedure for direct autoradiography 66
- 4 Use of X-ray intensifying screens to increase sensitivity for ^{32}P and γ -ray emitters 67
- 5 Fluorography of weak β emitters 70
 - General technical procedures for fluorography of acrylamide gels by all methods 71
 - Procedures for fluorography of acrylamide gels 72
 - Fluorography of other samples excluding acrylamide gels 76
- 6 General technical considerations for radioisotope detection by X-ray film 79
 - Choice of film and screens 79
 - Conditions for exposure and processing of film 80
 - Pre-exposure of film to hypersensitize it for use with intensifying screens or fluorography 80
 - Procedures for drying acrylamide or agarose gels 82
- 7. The underlying principles of radioisotope detection by X-ray film 82
- Acknowledgements 83
- References 83

5 The scintillation counter 85

Charles L. Dodson

- 1 Introduction 85
- 2 Counting efficiency and counting error 85
- 3 Counting error 86
- 4 Origin and nature of nuclear emissions 87
- 5 Interaction of decay species with matter 89
- 6 The liquid scintillation counter 91
 - Introduction 91
 - The scintillation cocktail 92
 - Beta particle spectrum 94
 - The liquid scintillation counter 95
- 7 Advanced topics 107
 - Multi-label counting 107
 - Colour quench detection and correction 109

CONTENTS

| | |
|--|------------|
| D.p.m. correction without quench curves | 110 |
| Sample monitoring | 111 |
| 8 Special counting situations | 111 |
| Čerenkov counting | 111 |
| Low-level counting | 113 |
| 9 Solid scintillators and programmable coincidence gates | 113 |
| 10 Sample preparation | 114 |
| Cocktail properties | 115 |
| Sample types | 116 |
| Vials | 120 |
| 11 Gamma counters | 120 |
| Gamma counter operational parameters | 121 |
| 12 Flow counters | 124 |
| 13 Multi-detector liquid scintillation and gamma counters | 125 |
| 14 Storage phosphor technology | 125 |
| Phosphor screens | 126 |
| Scanning unit | 126 |
| Phosphor screen erasure | 127 |
| Quantitative analysis | 128 |
| References | 128 |
| Further reading | 129 |
| 6 <i>In vitro</i> labelling of nucleic acids and proteins | 131 |
| Martin W. Cunningham, A. Patel, A. C. Simmonds and D. Williams | |
| 1 Introduction | 131 |
| Choice of radiolabel | 131 |
| 2 Applications of nucleic acid labelling | 133 |
| 3 Labelling methods for hybridization probes | 134 |
| Random prime labelling | 136 |
| Nick translation | 138 |
| Transcription labelling | 141 |
| End-labelling of oligonucleotides | 145 |
| Choosing a radioactive labelling system for nucleic acid probes | 151 |
| 4 Cycle sequencing with ³³ P-labelled terminators | 154 |
| 5 Applications of labelled proteins | 156 |
| 6 Labelling of proteins with ¹²⁵ I | 156 |
| General considerations | 156 |
| Direct labelling | 156 |
| Indirect methods | 161 |
| Purification of radio-iodinated proteins | 162 |
| Determination of specific activity | 163 |
| 7 Labelling of proteins with ³ H and ¹⁴ C | 164 |
| Tritium labelling | 164 |
| Carbon-14 labelling | 165 |
| 8 Protein kinase assays | 165 |
| 9 <i>In vitro</i> translation with radiolabelled amino acids | 168 |
| Acknowledgements | 169 |
| References | 170 |

7 Subcellular localization of biological molecules 171*Richard Cumming, Ian Durrant and Rachel Fallon*

- 1 Introduction 171
 - Compartmentalization within the cell 171
- 2 Subcellular localization of proteins 172
 - Introduction 172
 - Western blotting 173
 - Immunoprecipitation 176
 - Histological techniques 178
- 3 Subcellular localization of nucleic acids 181
 - Identification of nucleic acid molecules isolated from subcellular fractions 181
 - Localization of nucleic acids using ISH 182
 - Safety considerations when using ISH (32) 185
 - Preparation of target cells or tissues 186
 - Preparation of radiolabelled probe 190
 - Hybridization 192
 - Autoradiography 195
 - Analysis of data 199
 - Controls required for ISH 199
 - Simultaneous localization of proteins and nucleic acids 205
- 4 Conclusion 205
 - Acknowledgements 206
 - References 206

8 Radiolotopes and immunoassay 209*Adrian F. Bristow, Andrew J. H. Gearing and Robin Thorpe*

- 1 Introduction 209
- 2 Immunoassays: theoretical considerations 210
- 3 Radioimmunoassays 213
 - Reagents 213
 - Assay conditions 219
 - Separation techniques 219
 - Specific protocols 221
 - Interpretation of results 223
- 4 Immunoradiometric assays 226
 - Choice of solid support 226
 - Antibodies for IRMAs 226
 - Radiolabelling antibodies 227
 - Assay design 227
- 5 Non-radioisotopic immunoassays 229
 - Enzyme immunoassays 229
 - Radioisotopes versus non-isotopic methods in immunoassay: future trends 230
 - References 232

9 Pharmacological techniques 233*Isabel J. M. Beresford and Michael J. Allen*

- 1 Introduction 233

CONTENTS

- 2 Radioligand binding assays 233
 - Introduction 233
 - Choice of reagents 234
 - Separation techniques 236
 - Validation and optimization of assay 240
 - Data analysis 241
 - Non-radioactive assays 245
- 3 G-protein-coupled receptor second messenger assays 246
 - Introduction 246
 - Measurement of [³⁵S]GTP γ S binding 247
 - Measurement of 3',5'-cyclic adenosine monophosphate (cAMP) 250
 - Measurement of inositol triphosphate 253
 - Non-radioactive assays 255
- 4 Enzyme assays 256
 - Introduction 256
 - Measurement of nitric oxide synthase activity using [¹⁴C]arginine 256
 - Homogeneous assays 261
- 5 Ion channel assays 261
 - Introduction 261
 - Measurement of Na⁺ channel function by [¹⁴C]guanidine flux 261
- 6 Some commercially available curve-fitting programs 263
 - Acknowledgements 263
 - References 263
- 10 Summary of legislation in radiological protection in the UK 265**
David Prime and Barry Frith
 - 1 Introduction 265
 - 2 The Radioactive Substances Act (1993) 265
 - Acquisition 265
 - Storage 265
 - Radioactive waste 265
 - 3 The Ionising Radiations Regulations (1999) 266
 - Interpretation and general 266
 - General principles and procedures 266
 - Arrangements for the management of radiation protection 268
 - Designated areas 268
 - Classification and monitoring of persons 268
 - Arrangements for the control of radioactive substances, articles and equipment 269
 - Duties of employees and miscellaneous 269
- 11 Federal regulations on use of radionuclides in the USA 271**
Eileen D. Hotte and Neal Nelson
 - 1 Introduction 271
 - 2 Licensing requirements 273
 - 3 General domestic license 273
 - 4 Specific licenses of broad scope 274
 - 5 Medical uses 275

- 6 Exemptions 276
- 7 Radiation protection—Nuclear Regulatory Commission 276
 - Immediate telephone report 279
 - Twenty-four hour telephone report 279
 - Telephone report within 30 days 280
 - 30 day written report 280
- 8 Other sections of Title 10, *Code of Federal Regulations* 280
- 9 Radiation protection—Department of Labor 280
- 10 Transportation 281
 - Department of Transportation 281
 - United States Postal Service 281
- 11 Environment—Environmental Protection Agency 282
- 12 Human uses—Department of Health and Human Services 282
- 13 Historical perspective and future developments 283
- 14 Conclusion 287
 - References 287

Appendices 289

- A1 Properties and radiation protection data of isotopes commonly used in the biological sciences 290
- A2 Types of monitor 291
- A3 Curie-becquerel conversion chart 293
- A4 Calculation of amount of radioactivity remaining (R_t) after a given half-life (N_t) has passed 294
- A5 Units commonly used to describe radioactivity 295
- A6 Licensing and advisory authorities 296
- A7 List of suppliers 297
