Summing Up xxxii

A Note to the Reader 1

PART I Background Material 3

1 The Emergence of Rigorous Calculus 5

1.1 What Is Mathematical Analysis? 5

1.2 The Pythagorean Crisis 6

1.3 The Zeno Crisis 7

1.4 The Set Theory Crisis 10

2 Mathematical Grammar **12**
2.1 The Quantifiers *For Every* and *There Exists* 12
2.2 Negating a Mathematical Sentence 17
2.3 Combining Two or More Statements 19

3 Strategies for Writing Proofs **26**
3.1 Introduction 26
3.2 Statements that Contain the Word *and* 27
3.3 Statements that Contain the Word *or* 29
3.4 Statements of the Form $P \Rightarrow Q$ 32
3.5 Statements of the Form $\exists x\,(P(x))$ 33
3.6 Statements of the Form $\forall x\,(P(x))$ 37
3.7 Proof by Contradiction 41
3.8 Some Further Examples 44

4 Elements of Set Theory **50**
4.1 Introduction 50
4.2 Sets and Subsets 52
4.3 Functions 59

PART II Elementary Concepts of Analysis **69**

5 The Real Number System **71**
5.1 Introduction to the System $\mathbf{R}$ 71
5.2 Axioms for the Real Number System 79
5.3 Arithmetical Properties of $\mathbf{R}$ 81
5.4 Order Properties of $\mathbf{R}$ 81
5.5 Integers and Rationals 84
5.6 Upper and Lower Bounds 84
5.7 The Axiom of Completeness 88
5.8 Some Consequences of the Completeness Axiom 91
5.9 The Archimedean Property of the System $\mathbf{R}$ 93
5.10 Boundedness of Functions 97
5.11 Sequences, Finite Sets, and Infinite Sets 98
5.12 Sequences of Sets 100
5.13 Mathematical Induction 103

5.14 The Extended Real Number System 103
5.15 The Complex Number System (Optional) 106

6 Elementary Topology of the Real Line 107
6.1 The Role of Topology 107
6.2 Interior Points and Neighborhoods 108
6.3 Open Sets and Closed Sets 111
6.4 Some Properties of Open Sets and Closed Sets 113
6.5 The Closure of a Set 117
6.6 Limit Points 122
6.7 Neighborhoods of Infinity 125

7 Limits of Sequences 127
7.1 The Concepts "Eventually" and "Frequently" 127
7.2 Subsequences 128
7.3 Limits and Partial Limits of Sequences 129
7.4 Some Elementary Facts About Limits and Partial Limits 137
7.5 The Algebraic Rules for Limits 143
7.6 The Relationship Between Sequences and the Topology of $\mathbf{R}$ 148
7.7 Limits of Monotone Sequences 151
7.8 The Cantor Intersection Theorem 158
7.9 The Existence of Partial Limits 161
7.10 Upper and Lower Limits 164

8 Limits and Continuity of Functions 165
8.1 Limits of Functions 165
8.2 Limits at Infinity and Infinite Limits 176
8.3 One-Sided Limits 181
8.4 The Relationship Between Limits of Functions and Limits of Sequences 183
8.5 Some Facts About Limits of Functions 186
8.6 The Composition Theorem for Limits 188
8.7 Continuity 192
8.8 The Distance Function of a Set 198

8.9 The Behavior of Continuous Functions on Closed Bounded Sets 198
8.10 The Behavior of Continuous Functions on Intervals 200
8.11 Inverse Function Theorems for Continuity 207
8.12 Uniform Continuity 210

9 Differentiation 220
9.1 Introduction to the Concept of a Derivative 220
9.2 Derivatives and Differentiability 222
9.3 Some Elementary Properties of Derivatives 227
9.4 The Mean Value Theorem 233
9.5 Taylor Polynomials 239
9.6 Indeterminate Forms 246

10 The Exponential and Logarithmic Functions 253
10.1 The Purpose of This Chapter 253
10.2 Integer Exponents 254
10.3 Rational Exponents 255
10.4 Real Exponents 258
10.5 Differentiating the Exponential Function: Intuitive Approach 260
10.6 Differentiating the Exponential Function: Rigorous Approach 263

11 The Riemann Integral 270
11.1 Introduction to the Concept of an Integral 270
11.2 Partitions and Step Functions 275
11.3 Integration of Step Functions 279
11.4 Elementary Sets 287
11.5 Riemann Integrability and the Riemann Integral 294
11.6 Some Examples of Integrable and Nonintegrable Functions 299
11.7 Some Properties of the Riemann Integral 304
11.8 Upper, Lower, and Oscillation Functions 307
11.9 Riemann Sums and Darboux's Theorem (Optional) 314
11.10 The Role of Continuity in Riemann Integration 317

11.11 The Composition Theorem for Riemann Integrability 320
11.12 The Fundamental Theorem of Calculus 324
11.13 The Change of Variable Theorem 327
11.14 Integration of Complex Functions (Optional) 334

12 Infinite Series **335**
12.1 Introduction to Infinite Series 335
12.2 Elementary Properties of Series 343
12.3 Some Elementary Facts About Convergence 345
12.4 Convergence of Series with Nonnegative Terms 346
12.5 Decimals 353
12.6 The Ratio Tests 353
12.7 Convergence of Series Whose Terms May Change Sign 365
12.8 Rearrangements of Series 375
12.9 Iterated Series 375
12.10 Multiplication of Series 377
12.11 The Cantor Set 382

13 Improper Integrals **383**
13.1 Introduction to Improper Integrals 383
13.2 Elementary Properties of Improper Integrals 387
13.3 Convergence of Integrals of Nonnegative Functions 389
13.4 Absolute and Conditional Convergence 392

14 Sequences and Series of Functions **399**
14.1 The Three Types of Convergence 400
14.2 The Important Properties of Uniform Convergence 412
14.3 The Important Property of Bounded Convergence 414
14.4 Power Series 426
14.5 Power Series Expansion of the Exponential Function 440
14.6 Binomial Series 442
14.7 The Trigonometric Functions 448
14.8 Analytic Functions of a Real Variable 456
14.9 The Inadequacy of Riemann Integration 456

15 Calculus of a Complex Variable (Optional) **458**

16 Integration of Functions of Two Variables **459**
16.1 The Purpose of This Chapter 459
16.2 Functions of Two Variables 460
16.3 Continuity of a Partial Integral 464
16.4 Differentiation of a Partial Integral 466
16.5 Some Applications of Partial Integrals 468
16.6 Interchanging Iterated Riemann Integrals 470

17 Sets of Measure Zero (Optional) **478**

18 Calculus of Several Variables (Optional) **479**

Bibliography **480**

Index of Symbols and General Index **482**
