TRIGONOMETRIC SERIES

Third Edition
Volumes I & II combined

With a foreword by Robert Fefferman

A. Zygmund

Cambridge Mathematical Library

CONTENTS

Preface *page* xi

List of Symbols xiv

CHAPTER I

TRIGONOMETRIC SERIES AND FOURIER SERIES. AUXILIARY RESULTS

§1. Trigonometric series *page* 1

§2. Summation by parts 3

§3. Orthogonal series 5

§4. The trigonometric system 6

§5. Fourier-Stieltjes series 10

§6. Completeness of the trigonometric system 11

§7. Bessel's inequality and Parseval's formula 12

§8. Remarks on series and integrals 14

§9. Inequalities 16

§10. Convex functions 21

§11. Convergence in L^r 26

§12. Sets of the first and second categories 28

§13. Rearrangements of functions. Maximal theorems of Hardy and Littlewood 29

Miscellaneous theorems and examples 34

CHAPTER II

FOURIER COEFFICIENTS. ELEMENTARY THEOREMS ON THE CONVERGENCE OF $S[f]$ AND $\tilde{S}[f]$

§1. Formal operations on $S[f]$ 35

§2. Differentiation and integration of $S[f]$ 40

§3. Modulus of continuity. Smooth functions 42

§4. Order of magnitude of Fourier coefficients 45

§5. Formulae for partial sums of $S[f]$ and $\tilde{S}[f]$ 49

§6. The Dini test and the principle of localization 52

§7. Some more formulae for partial sums 55

§8. The Dirichlet-Jordan test 57

§ 9. Gibbs's phenomenon page 61
§ 10. The Dini-Lipschitz test 62
§ 11. Lebesgue's test 65
§ 12. Lebesgue constants 67
§ 13. Poisson's summation formula 68
Miscellaneous theorems and examples 70

CHAPTER III

SUMMABILITY OF FOURIER SERIES

§ 1. Summability of numerical series 74
§ 2. General remarks about the summability of $S[f]$ and $\tilde{S}[f]$ 84
§ 3. Summability of $S[f]$ and $\tilde{S}[f]$ by the method of the first arithmetic mean 88
§ 4. Convergence factors 93
§ 5. Summability (C, α) 94
§ 6. Abel summability 96
§ 7. Abel summability (*cont.*) 99
§ 8. Summability of $S[dF]$ and $\tilde{S}[dF]$ 105
§ 9. Fourier series at simple discontinuities 106
§ 10. Fourier sine series 109
§ 11. Gibbs's phenomenon for the method (C, α) 110
§ 12. Theorems of Rogosinski 112
§ 13. Approximation to functions by trigonometric polynomials 114
Miscellaneous theorems and examples 124

CHAPTER IV

CLASSES OF FUNCTIONS AND FOURIER SERIES

§ 1. The class L^2 127
§ 2. A theorem of Marcinkiewicz 129
§ 3. Existence of the conjugate function 131
§ 4. Classes of functions and (C, 1) means of Fourier series 136
§ 5. Classes of functions and (C, 1) means of Fourier series (*cont.*) 143
§ 6. Classes of functions and Abel means of Fourier series 149

§7. Majorants for the Abel and Cesàro means of $S[f]$ *page* 154
§8. Parseval's formula 157
§9. Linear operations 162
§10. Classes L_ϕ^* 170
§11. Conversion factors for classes of Fourier series 175
Miscellaneous theorems and examples 179

CHAPTER V

SPECIAL TRIGONOMETRIC SERIES

§1. Series with coefficients tending monotonically to zero 182
§2. The order of magnitude of functions represented by series with monotone coefficients 186
§3. A class of Fourier-Stieltjes series 194
§4. The series $\Sigma n^{-\frac{1}{2}-\alpha} e^{ic n \log n} e^{inx}$ 197
§5. The series $\Sigma \nu^{-\beta} e^{i\nu^\alpha} e^{i\nu x}$ 200
§6. Lacunary series 202
§7. Riesz products 208
§8. Rademacher series and their applications 212
§9. Series with 'small' gaps 222
§10. A power series of Salem 225
Miscellaneous theorems and examples 228

CHAPTER VI

THE ABSOLUTE CONVERGENCE OF TRIGONOMETRIC SERIES

§1. General series 232
§2. Sets N 235
§3. The absolute convergence of Fourier series 240
§4. Inequalities for polynomials 244
§5. Theorems of Wiener and Lévy 245
§6. The absolute convergence of lacunary series 247
Miscellaneous theorems and examples 250

CHAPTER VII

COMPLEX METHODS IN FOURIER SERIES

§ 1. Existence of conjugate functions *page* 252
§ 2. The Fourier character of conjugate series 253
§ 3. Applications of Green's formula 260
§ 4. Integrability B 262
§ 5. Lipschitz conditions 263
§ 6. Mean convergence of $S[f]$ and $\tilde{S}[f]$ 266
§ 7. Classes H^p and N 271
§ 8. Power series of bounded variation 285
§ 9. Cauchy's integral 288
§ 10. Conformal mapping 289
Miscellaneous theorems and examples 295

CHAPTER VIII

DIVERGENCE OF FOURIER SERIES

§ 1. Divergence of Fourier series of continuous functions 298
§ 2. Further examples of divergent Fourier series 302
§ 3. Examples of Fourier series divergent almost everywhere 305
§ 4. An everywhere divergent Fourier series 310
Miscellaneous theorems and examples 314

CHAPTER IX

RIEMANN'S THEORY OF TRIGONOMETRIC SERIES

§ 1. General remarks. The Cantor-Lebesgue theorem 316
§ 2. Formal integration of series 319
§ 3. Uniqueness of the representation by trigonometric series 325
§ 4. The principle of localization. Formal multiplication of trigonometric series 330

§5. Formal multiplication of trigonometric series (*cont.*) *page* 337
§6. Sets of uniqueness and sets of multiplicity 344
§7. Uniqueness of summable trigonometric series 352
§8. Uniqueness of summable trigonometric series (*cont.*) 356
§9. Localization for series with coefficients not tending to zero 363
Miscellaneous theorems and examples 370

Notes 375
