## PART I INTRODUCTION TO THE FEM

<b>1</b>	<b>Introduction</b>	<b>3</b>
1.1	Basic concepts of quantum mechanics	4
1.1.1	Schrödinger's equation	4
1.1.2	Postulates of quantum mechanics	8
1.2	Principle of stationary action	10
1.2.1	The action integral	11
1.2.2	Examples	15
1.3	Finite elements	18
1.4	Historical comments	22
1.5	Problems	23
	References	28
<b>2</b>	<b>Simple quantum systems</b>	<b>31</b>
2.1	The simple harmonic oscillator	31
2.2	The hydrogen atom	39
2.3	The Rayleigh–Ritz variational method	45
2.4	Programming considerations	50
2.5	Problems	57
	References	60
<b>3</b>	<b>Interpolation polynomials in one dimension</b>	<b>63</b>
3.1	Introduction	63
3.2	Lagrange interpolation polynomials	64
3.3	Hermite interpolation polynomials	66
3.4	Transition elements	70
3.5	Low order interpolation polynomials	71
3.5.1	Low order Lagrange interpolation	71
3.5.2	Low order Hermite interpolation	72
3.6	Interpolation polynomials in Mathematica	72
3.6.1	Lagrange interpolation	72
3.6.2	Hermite interpolation	74
3.7	Infinite elements	76

3.8	Simple quantum systems revisited	77
3.9	Problems	80
	References	81
<b>4</b>	<b>Adaptive FEM</b>	<b>83</b>
4.1	Introduction	83
4.2	Error in interpolation	84
4.3	Error in the discretized action	86
4.3.1	$h$ -convergence	86
4.3.2	$p$ -convergence	88
4.4	The action in adaptive calculations	91
4.4.1	An ordinary differential equation	92
4.4.2	The H atom again	96
4.4.3	Adaptive $p$ -refinement	102
4.5	Concluding remarks	104
	References	105

## PART II APPLICATIONS IN 1D

<b>5</b>	<b>Quantum mechanical tunneling</b>	<b>109</b>
5.1	Introduction	109
5.2	Mixed BCs: redefining the action	110
5.3	The Galerkin method	113
5.4	Tunneling calculations in the FEM	115
5.4.1	Evaluation of the residual	115
5.4.2	Applying mixed BCs	118
5.5	Comparing Galerkin FEM with WKB	123
5.6	Quantum states in asymmetric wells	125
5.7	Problems	137
	References	141
<b>6</b>	<b>Schrödinger–Poisson self-consistency</b>	<b>145</b>
6.1	Introduction	145
6.2	Schrödinger and Poisson equations	149
6.3	Source terms	151
6.4	The Fermi energy and charge neutrality	153
6.5	The Galerkin finite element approach	155
6.5.1	Boundary conditions	155
6.5.2	The iteration procedure	159
6.5.3	Numerical issues	161

6.5.4 Essential and natural boundary conditions	164
6.6 Further developments	165
6.7 Problems	167
References	169
<b>7 Landau states in a magnetic field</b>	171
7.1 Introduction	171
7.1.1 Landau levels	171
7.1.2 Density of states	174
7.2 Heterostructures in a <b>B</b> -field	177
7.2.1 Faraday configuration	177
7.2.2 Voigt configuration	179
7.3 Comparison with experiments	181
7.3.1 Interband transitions	181
7.3.2 Energy dependence on the orbit center	183
7.3.3 Level mixing in superlattices with small band offsets	185
7.3.4 Density of states in the Voigt geometry	186
7.4 Voigt geometry and a semiclassical model	188
7.4.1 Landau orbit theory	188
7.4.2 Envelope functions and the FEM in <i>k</i> -space	191
7.5 Problems	192
References	194
<b>8 Wavefunction engineering</b>	195
8.1 Introduction	195
8.2 <b>k</b> · <b>P</b> theory of band structure	197
8.3 Designing mid-infrared lasers	200
8.3.1 The type-II W-laser	200
8.3.2 The interband cascade laser	206
8.4 Concluding comments	210
References	211

### PART III 2D APPLICATIONS OF THE FEM

<b>9 2D elements and shape functions</b>	217
9.1 Introduction	217
9.2 Rectangular elements	218
9.2.1 Lagrange elements	218

9.2.2	Hermite elements	221
9.3	Triangular elements	222
9.4	Defining curved edges	228
9.4.1	An element on a parametric curve	228
9.4.2	Parametric form of 2D surfaces	231
9.5	The action in 2D problems	233
9.6	Gauss integration in two dimensions	236
	References	238
<b>10</b>	<b>Mesh generation</b>	241
10.1	Meshing simple regions	241
10.1.1	Distortion of regular regions	242
10.1.2	Using orthogonal curved coordinates	247
10.2	Regions of arbitrary shape	247
10.2.1	Delaunay meshing	247
10.2.2	Advancing front algorithms	248
10.2.3	The algebraic integer method	250
	References	256
<b>11</b>	<b>Applications in atomic physics</b>	257
11.1	The H atom in a magnetic field	257
11.1.1	Schrödinger's equation and the action	258
11.1.2	Applying the FEM	259
11.1.3	Magnetic fields	266
11.2	Ground state energy in helium	269
11.3	Other results	271
	References	273
<b>12</b>	<b>Quantum wires</b>	275
12.1	Introduction	275
12.2	Quantum wires and the FEM	276
12.3	Symmetry properties of the square wire	282
12.4	The checkerboard superlattice	285
12.5	Optical nonlinearity in the CBSL	289
12.6	Quantum wires of any cross-section	292
	References	295
<b>13</b>	<b>Quantum waveguides</b>	299
13.1	Quantization of resistance	300
13.2	The straight waveguide	303
13.3	Quantum bound states in waveguides	311

13.4 The quantum interference transistor	313
13.5 "Stealth" elements and absorbing BC	315
13.6 The Ginzburg-Landau equation	322
References	323
<b>14 Time-dependent problems</b>	327
14.1 Introduction	327
14.2 Standard approaches to time evolution	327
14.2.1 Schrödinger's equation and the method of finite differences	327
14.2.2 The finite difference method for the wave equation	330
14.3 A transfer matrix for time evolution	331
14.4 Lanczos reduction of transfer matrices	335
14.5 Instability with initial conditions	338
14.5.1 Comparing IVBC and two-point BCs	338
14.6 The variational approach	347
14.6.1 A variational difficulty	347
14.6.2 Variations using adjoint functions	348
14.6.3 Adjoint variations for the wave equa- tion	350
14.6.4 Connection with quantum field theory	352
14.7 Concluding remarks	355
References	356

## PART IV SPARSE MATRIX APPLICATIONS

<b>15 Matrix solvers and related issues</b>	363
15.1 Introduction	363
15.2 Bandwidth reduction	363
15.3 Solution of linear equations	366
15.3.1 Gauss elimination	366
15.3.2 The conjugate gradient method	367
15.4 The standard eigenvalue problem	372
15.5 The generalized eigenvalue problem	373
15.5.1 Sturm sequence check	376
15.5.2 Inverse vector iteration	378
15.5.3 The subspace vectors	380
15.5.4 The Rayleigh quotient	381
15.5.5 Subspace iteration	383
15.5.6 The Davidson algorithm	385

15.5.7 Least square residual minimization	388
15.5.8 The Lanczos method	388
References	393
 PART V BOUNDARY ELEMENTS	
<b>16 The boundary element method</b>	399
16.1 Introduction	399
16.2 The boundary integral	400
16.3 An analytical approach	402
16.3.1 A Dirichlet problem	402
16.3.2 A Neumann problem	406
16.4 Infinite domain Green's function	408
16.5 Numerical issues	414
16.5.1 Evaluation of the element integrals	414
16.5.2 Applying boundary conditions	415
16.5.3 Boundary condition at the corner node	417
16.5.4 Setting up the matrix equation	420
16.5.5 Construction of interior solution	422
16.6 A worked example	423
16.7 Two sum rules	425
16.8 Comparing the BEM with the FEM	427
16.9 Problems	428
References	432
<b>17 The BEM and surface plasmons</b>	435
17.1 Introduction	435
17.2 Multiregion BEM: two regions	437
17.2.1 Linear interpolation	437
17.2.2 Hermite interpolation	439
17.3 Bulk and surface plasmons	440
17.3.1 Bulk plasma oscillations	441
17.3.2 Surface plasmons at a single planar interface	443
17.3.3 Surface plasmons for slab geometry	447
17.3.4 Surface plasmons in a cylindrical wire	451
17.3.5 Two metallic wires	455
17.3.6 Metal wire on a substrate	458
17.3.7 Plasmons in other confining geometries	460
17.4 Surface-enhanced Raman scattering	461
17.5 Problems	462

References	468
<b>18 The BEM and quantum applications</b>	471
18.1 Introduction	471
18.2 2D electron waveguides	471
18.2.1 Implementing boundary conditions	477
18.2.2 Multiregion waveguide problems	483
18.2.3 Multiple ports and transmission	484
18.3 The BEM and 2D scattering	487
18.4 Eigenvalue problems and the BEM	491
18.4.1 Quantum wires	491
18.4.2 Hearing the shape of a drum	495
18.5 Concluding remarks on the BEM	498
18.6 Problems	501
References	505

## PART VI APPENDICES

<b>A Gauss quadrature</b>	511
A.1 Introduction	511
A.2 Gauss–Legendre quadrature	511
A.3 Gauss–Legendre base points and weights	513
A.4 An algorithm for adaptive quadrature	517
A.5 Other Gauss formulas	519
A.6 The Cauchy principal value of an integral	520
A.7 Properties of Legendre functions	522
A.8 Problems	524
References	525
<b>B Generalized functions</b>	527
B.1 The Dirac $\delta$ -function	527
B.2 The $\delta$ -function as the limit of a “normal” function	530
B.3 $\delta$ -functions in three dimensions	532
B.4 Other generalized functions	533
B.4.1 The step-function $\theta(x)$	533
B.4.2 The sign-function $\varepsilon(x)$	534
B.4.3 The Plemelj formula	535
B.4.4 An integral representation for $\theta(z)$	536
B.5 Problems	536
References	538

<b>C Green's functions</b>	541
C.1 Introduction	541
C.2 Properties of Green's functions	543
C.3 Sturm–Liouville differential operators	547
C.4 Green's functions in electrostatics	554
C.5 Boundary integral solutions: a comment	557
C.6 Green's functions in electrodynamics	565
C.7 The wave equation in one-dimension	570
C.8 The wave equation in two dimensions	573
C.9 Green's functions and integral equations	574
C.10 Problems	576
References	579
<b>D Physical constants</b>	581
<b>Author index</b>	583
<b>Subject index</b>	597
