

 WILEY

The **GSM** Network

GPRS Evolution: One Step Towards **UMTS**

Second Edition

Joachim Tisal

Contents

Preface	xi
1 Introduction	1
1.1 Historical Perspective	1
1.2 Radio Transmission Fundamentals	5
1.2.1 Modulation	5
1.2.2 Transmission	6
1.3 Impairments to Radio Transmission	10
1.4 Creation of the GSM Group	11
1.5 Digital Standards	12
1.6 History of Speech Coding	14
2 Cellular Concepts	17
2.1 Frequency Re-use	17
2.2 Mobility	19
2.3 Multiple Access Design	20
2.4 Standardisation	23
2.5 Network Architecture	24
3 The GSM Standard	29
3.1 Scope of the GSM Standard	29
3.2 Bearer Services	30
3.2.1 Information Transfer Attributes	31
3.2.2 Access Attributes	31
3.2.3 General Attributes	32
3.3 Teleservices	33
3.4 Supplementary Services	34

3.5	Multiplexing Techniques	35
3.5.1	TDMA	35
3.5.2	Frequency Division Multiplexing	36
3.5.3	Code Division Multiplexing	38
3.6	GSM Requirements	39
3.6.1	User Requirements	40
3.6.2	Network Operator Requirements	40
3.6.3	Manufacturer Requirements	41
3.6.4	Requirements of the Regulating Body	41
4	GSM Network Infrastructure	43
4.1	Overview of Network Infrastructure	43
4.1.1	Network Equipment Functions	43
4.1.2	Network Interfaces	44
4.2	GSM Network Equipment	45
4.2.1	The Base Station (BTS)	45
4.2.2	The Base Station Controller (BSC)	46
4.2.3	The Switch (MSC)	47
4.2.4	The Home Location Register (HLR)	47
4.2.5	The Authentication Centre (AUC)	48
4.2.6	The Visitor Location Register (VLR)	49
4.2.7	Call Routing	49
4.2.8	The Operations and Maintenance Centre (OMC)	50
4.3	Radio Transmission	51
4.3.1	Physical Channels	51
4.3.2	Packet Burst Structures	52
4.3.3	Logical Channels	54
4.4	Layer 2: Datalink	59
4.5	GSM Protocol Stacks	60
4.6	Radio Characteristics of the GSM Standard	61
4.7	Radio Resource Management	62
5	The Radio Sub-System	65
5.1	Overview of the Radio Sub-System	65
5.1.1	The A-bis Interface	66
5.1.2	The A Interface	67
5.1.3	The X.25 Interface	68
5.2	The Base Station	69
5.3	The Base Station Controller (BSC)	72
6	The Network Sub-System	75
6.1	Overview of the Network Sub-System	75
6.2	The Mobile Switching Centre	76
6.3	The HLR	76
6.4	The VLR	77

6.5	The AUC	78
6.6	The Equipment Identity Registers	80
7	Network Management	83
7.1	Overview of Network Management	83
7.2	Objectives	85
7.2.1	Profile of the Q3 Interface	86
7.3	Management Functions	88
7.3.1	Administration Management	89
7.3.2	Security Management	90
7.3.3	Operations	90
7.3.4	Maintenance	95
7.3.5	Management of the Network	96
8	Mobile Terminals	97
8.1	Overview of Mobile Terminals	97
8.2	Types of Terminal	99
8.3	Terminal Output Power	100
8.4	Mobile Terminal Characteristics	101
8.5	Functional Architecture of the Mobile Terminal	105
8.6	Encryption	107
8.6.1	Encryption Concepts	107
8.6.2	Public Key Ciphering	107
8.6.3	Authentication	107
8.6.4	Certification	108
8.7	The Subscriber Identity Module (SIM)	108
8.7.1	Overview	108
8.7.2	Subscriber Identity Module Functions	110
8.7.3	Technical Features of the Module	116
8.7.4	Module Life-Cycle	121
8.7.5	Data Stored on the SIM	124
8.7.6	'MIMOSA' a Multi-Service Card	127
9	The DECT 1800 Standard	129
9.1	DECT Technology	129
9.2	System Features	131
9.3	Technical Characteristics of the Standard	131
9.3.1	Frequency Spectrum Use	131
9.3.2	Physical Channels	132
9.4	DECT Software Architecture	134
9.4.1	The Physical Layer	134
9.4.2	The Media Access Layer	135
9.4.3	The Data Link Layer	135
9.4.4	The Network Layer	136
9.4.5	The Management Entity	136

9.5	DECT Protocols	137
9.5.1	Base Station Datalink Layer	137
9.5.2	Mobile Station Datalink Layer	138
9.5.3	Base Station Network Layer	138
9.6	The European View of Next-Generation Cellular Mobile Radio Systems	139
10	The Organisation of GSM Services	141
10.1	Introduction to the Organisation of GSM Services	141
10.2	The Operators	142
10.3	The Service Marketing Companies	142
11	The Short Message Service	145
11.1	Introduction	145
11.1.1	Definition	145
11.1.2	New Features Introduced with Messages	145
11.2	New Opportunities for Operators	146
11.3	Architecture of the SMS Network	147
11.3.1	The Elements of the Network	147
11.3.2	Signalling within a Network	150
11.3.3	Reception of a Message by a Terminal	151
11.3.4	Transmission of a Message by a Terminal	153
12	GPRS	155
12.1	Introduction	155
12.2	The Components of a GPRS Network	156
12.2.1	Connection in Transparent Mode	158
12.2.2	Connection in Non-Transparent Mode	159
12.2.3	Packet Routing	159
12.3	The WAP Protocol	159
12.4	The Future of GPRS	160
12.5	The Advantages of GPRS	161
13	UMTS	163
13.1	Introduction	163
13.2	The International Context	166
13.3	The French Context	166
13.4	The UMTS Stakes	167
13.4.1	The Services	167
13.4.2	The Technological Stakes	168
14	The WAP Protocol	171
14.1	The Context	171
14.1.1	What is WAP?	171
14.1.2	What is the Purpose of WAP?	171

14.1.3	What is the WAP Forum?	172
14.1.4	Which Wireless Networks for the WAP?	173
14.1.5	The Benefits	174
14.2	The Wireless Application Environment	175
14.2.1	The WAE Architecture Model	176
14.2.2	The WAP Stack	181
14.2.3	The Client Stack	184
14.2.4	The WAE User Agents	184
14.2.5	The WAE Services and Formats	185
14.2.6	The Gateway	187
14.2.7	Internationalisation	188
14.2.8	Security	188
14.3	The Wireless Telephony Application (WTA)	189
14.3.1	WTA and WAE Users Agents	189
14.3.2	WTA Services	191
14.3.3	WTA Security	192
14.4	The Future of WAP	193
14.4.1	Handset Manufacturers and WAP Services	194
14.4.2	WAP in the Competitive Environment	195
14.5	References	196
15	Enhanced Data Rates for GSM Evolution	197
15.1	Introduction	197
15.2	Enhanced Voice Services	198
15.2.1	Speech Coding	199
15.2.2	Modulation Channel Coding	200
15.3	Enhanced Speed for TDMA Data Services	200
15.4	Smart Antenna Technology	202
15.5	Automatic and Dynamic Channel Assignment	203
15.6	Microcellular Evolution	205
15.7	Packet Data Wireless Access Using EDGE	205
15.8	Summary	207
	Bibliography	209
	Glossary	215
	Index	221
