Preface	<i>xi</i>
1 Introduction	1
1.1 Focal Quality Indicators	2
1.2 Radial Motion Compensation Using the Phase Method	2
1.3 Rotational Motion Compensation	3
1.4 Selective Motion Compensation Technique	4
1.5 Sidelobe Apodization	5
2 ISAR Concepts	9
2.1 ISAR Data Collection and Resolution	9
2.1.1 ISAR Geometry	9
2.1.2 ISAR Data Collection	10
2.1.3 ISAR Slant Range and Cross-Range Resolution	12
2.2 Stepped-Frequency ISAR Processing	13
2.2.1 ISAR Image Formation	13
2.2.2 Range Walk and Range Offset	15
2.2.3 Motion Compensation	17

2.2.4	ISAR Imaging of a Point Target	18
2.3	Entropy Measurement	19
2.3.1	Definition of Entropy	20
2.3.2	Image Entropy	22
2.3.3	Results	24
2.4	Summary	25
3	Burst Derivative Approach	27
3.1	The Cramer-Rao Lower Bound and Fisher Information	27
3.2	Fisher Information as a Focal Quality Indicator	29
3.3	Fisher Information for Motion Compensation	30
3.4	Burst Derivative as a Function of Motion Estimates	32
3.4.1	Velocity Estimation Error	33
3.4.2	Acceleration Estimation Error	35
3.5	Dependence of Burst Derivative on Radar Parameters	35
3.6	Additive Noise	37
3.7	Summary	38
4	Phase Difference Method	41
4.1	Phase of Target Response	41
4.2	Phase Difference Concepts	42
4.3	Phase Difference Algorithm	44
4.4	Phase Difference as a Function of Motion Estimates	45
4.4.1	Velocity Estimation Error	45
4.4.2	Acceleration Estimation Error	45
4.5	Results	47
4.6	Summary	49
5	Least Squares Motion Parameter Estimation	51
5.1	General Least Squares Problem	51
5.2	Fitting a Polynomial to a Set of Measurements	53

5.3	Application of Least Squares to Motion Compensation	54
5.4	Summary	58
6	Complex Analysis of ISAR Signatures	61
6.1	Noise Suppression for Phase Slope Measurement	62
6.2	Noise Suppression Using CFAR Filtering	63
6.2.1	Weibull Distribution	64
6.2.2	Maximum Likelihood Estimation of Weibull Parameters	65
6.2.3	Weibull Parameter Estimation Via the Method of Moments	67
6.2.4	Weibull Parameter Estimation Via Menon's Method	70
6.2.5	Example of Weibull Parameter Estimation	72
6.2.6	CFAR Filtering	73
6.3	Complex Analysis of Point Scatterers	74
6.3.1	One Point Scatterer	74
6.3.2	Two Point Scatterer Case	77
6.4	Results for a Man-Made Target	81
6.5	Summary	81
7	Cramer-Rao Bounds for Stepped-Frequency Waveform	85
7.1	Cramer-Rao Bound for Range Estimation	86
7.2	Cramer-Rao Bound for Velocity Estimation	87
7.3	Cramer-Rao Bound for Acceleration Estimation	92
7.4	Monte Carlo Simulations	97
7.5	Summary	100
8	Weighted Least Squares Motion Parameter Estimation	101
8.1	Least Squares for Unevenly Spaced Data	101
8.2	Weighting Matrix	103
8.3	Weighted Least Squares Fitting	106

8.4	Weighted Least Squares Focal Quality Indicator	108
8.5	Motion Compensation Algorithm Via Weighted Least Squares	110
8.6	Simulation of Point Scatterers	111
8.6.1	Application to a Point Target	111
8.6.2	Comparison of Weighted Least Squares and Entropy Results	114
8.7	ISAR Image Formation	115
8.8	Summary	118
9	Signal Analysis and Synthesis Using Short-Time Fourier Transforms	121
9.1	The Continuous Short-Time Fourier Transform	121
9.2	The Discrete STFT	131
9.3	Parallel Processing of the STFT	133
9.4	STFT Synthesis Using the Overlap-Add Method	135
9.4.1	Overlap-Add Method for Inverse STFT Calculation	135
9.4.2	Overlap Value for Optimum Reconstruction Using the Inverse STFT	136
9.4.3	Reconstruction Using the Hamming Window	138
9.5	Signal Analysis and Synthesis Using Superresolution in the STFT	141
9.5.1	Superresolution Using Adaptive Extrapolations	141
9.5.2	Short-Time AWNE Approach	143
9.5.3	STAWNE Approach to Spectral Modification and Synthesis	143
9.5.4	Example of Component Separation Using STFT and STAWNE	146
10	Selective Motion Compensation	149
10.1	Definition of the Time-Varying Filter	149
10.2	Evaluation of Time-Frequency Filtering	150
10.2.1	IF From the Smoothed Central Finite Difference Method	151
10.2.2	IF From Linear Prediction and Signal Modeling	151

10.2.3	Computer Simulations	153
10.3	Binary Mask Formation	154
10.4	Filter Enhancement	155
10.5	Filter Labeling	158
10.6	Algorithm Description and Examples	160
10.7	Summary	170
11	Imaging Enhancement Using the Gabor Wavelet Transform	173
11.1	Problem Statement	173
11.2	Matched Filter Processing	174
11.3	Coherent Processing and Image Formation	175
11.4	Effects of Target Motion	175
11.4.1	Range Walk and Range Offset	175
11.4.2	Optimum Integration Time	176
11.5	Applications of the GWT to ISAR Imaging	178
11.5.1	Selection of Gabor Function Parameters	178
11.5.2	Imaging of Multiple Moving Targets	180
12	Introduction to Rotational Motion Compensation	187
12.1	Quadratic Phase Distortion	188
12.2	Frequency Space Aperture	188
12.3	Central Slice Projection Theorem	190
12.4	Blur Radius	192
12.5	ISAR Geometry	194
12.6	Slant-Range and Cross-Range Resolution	194
12.7	Stepped Rotation	195
12.7.1	Down-Range Interpolation	196
12.7.2	Azimuth Interpolation	197
12.8	Continuous Rotation	198
13	Interpolation Methods for Rotational Motion Compensation	201
13.1	Approximation Methods	202

13.1.1	Nearest-Neighbor Approximation	202
13.1.2	Euclidean Approximation	203
13.2	One-Dimensional Interpolation Methods	205
13.2.1	Linear Interpolation	205
13.2.2	Cubic Spline Interpolation	206
13.2.3	Shannon Reconstruction	208
13.2.4	Sampling Jitter	209
13.3	Weighted Integration Techniques	210
13.3.1	Airy Kernel	210
13.3.2	Spatial Domain Reconstruction	210
13.4	Comparison of Results Using Various Interpolation Methods	211
13.4.1	Simulation Model	212
13.4.2	Image Entropy	212
13.4.3	Computational Efficiency	212
13.5	Rotational Motion Estimation	213
14	Image Enhancement Via Sidelobe Apodization	217
14.1	Introduction to Sidelobe Apodization	217
14.2	Introduction to SVA	218
14.3	Parametric Windows	222
14.4	Sidelobe Apodization Using the Kaiser Window	223
14.5	Summary	230
	Index	233
