

SPACE-TIME PROCESSING FOR CDMA MOBILE COMMUNICATIONS

Pieter van Rooyen
Michiel Lötter
Danie van Wyk

Contents

List of Figures	xi
List of Tables	xvii
Preface	xix
1. INTRODUCTION	1
1.1 IMT-2000	2
1.2 IMT-2000 Spectrum Allocation	4
1.3 From Second Generation to Third Generation	5
1.4 Universal Mobile Telecommunications System	7
1.5 Third Generation and Beyond	9
1.5.1 Re-configurable Terminals	9
1.5.2 Application and Service Download	11
1.5.3 Broadband Satellite Systems	11
1.5.4 Space-time Techniques	11
1.6 Space-time Processing Systems	12
1.7 Organization of Book	13
2. BASIC SPACE-TIME ASPECTS	17
2.1 Relevant Cellular Terminology	18
2.2 Basic Adaptive Array Concepts	23
2.3 Space-time Processing	28
2.3.1 Space-time Base Stations	34
2.3.2 Space-time Mobiles	35
2.3.3 Advantages of Space-time Processing	35
2.4 System Model for Space-time Processing	37
2.5 Practical Implementation of CDMA Smart Antenna Systems	40
2.6 Summary	41
3. ASPECTS INFLUENCING SPACE-TIME PERFORMANCE	43
3.1 Propagation Path	43
3.1.1 Path Loss	44
3.2 Temporal Fading	45
3.2.1 Multi-path Intensity Profile	46

3.2.2	Space-frequency Correlation Function	49
3.2.3	Doppler Power Spectrum	50
3.2.4	Space-time Correlation Function	52
3.2.5	Frequency-selective Fading	54
3.2.6	Flat Fading	54
3.2.7	Fast Fading	55
3.2.8	Slow Fading	55
3.3	Scattering Environment	55
3.3.1	High-rank Channels	56
3.3.2	Low-rank Channels	56
3.4	Angular Subscriber Distribution	59
3.5	Summary	61
4.	SPACE-TIME CHANNEL MODELS	63
4.1	Basic Modeling	63
4.2	Local Scattering Environment	64
4.2.1	Circular Disk of Scatterers Model	65
4.2.1.1	Correlation	68
4.2.2	Gaussian Scatterer Model	69
4.2.2.1	Correlation	74
4.2.3	Effective Scatterer Model	75
4.2.4	Discrete Uniform Distribution Model	76
4.2.5	Geometrically Based Single-Bounce Statistical Models	77
4.2.5.1	Geometrically Based Circular Macro-cell Model	78
4.2.5.2	Geometrically Based Elliptical Micro-cell Wideband Model	78
4.2.6	Gaussian Wide Sense Stationary Uncorrelated Scattering Model	79
4.2.7	Raleigh's Model	81
4.2.8	Uniform Sectorized Distribution Model	82
4.2.9	Modified Saleh-Valenzuel's Model	83
4.2.10	Extended Tap-delay-line Model	84
4.2.11	Measurement-based Channel Models	84
4.2.12	Ray Tracing Models	85
4.3	Fading Distribution Based on Scattering Environment	86
4.3.1	Exponential Fading Distribution	87
4.3.2	Gaussian Fading Distribution	87
4.4	Summary of Space-time Channel Models	87
4.5	Summary	91
5.	SMART ANTENNA TECHNIQUES	93
5.1	Beamforming	96
5.1.1	Fixed Beamforming	96
5.1.2	One-shot Beamforming	97
5.1.3	Adaptive Beamforming Algorithms	98
5.1.3.1	Non-blind beamforming	98
5.1.3.2	Blind Beamforming	99
5.1.3.3	Constant Modulus Algorithm	99

5.1.3.4	Algorithms based on DOA Estimation	101
5.1.3.5	Algorithms based on Property-restoral Techniques	101
5.1.3.6	Algorithms based on Discrete Signal Structure	102
5.1.3.7	General Algorithms	102
5.1.3.8	Integrated Algorithms for CDMA Signalling	103
5.1.4	Correlation Influence on Beam Pattern	107
5.2	Diversity	111
5.2.1	Transmit Diversity	111
5.2.1.1	Code-Division Transmit Diversity	113
5.2.1.2	Time-Division Transmit Diversity	115
5.2.1.3	CDTD and TDTD with Pre-RAKE Combining	116
5.2.2	Receive Diversity	117
5.3	Sectorization	120
5.4	Switched-beam Smart Antennas	120
5.5	Summary	123
6.	SMART ANTENNA PERFORMANCE	125
6.1	Beamforming Array Performance	125
6.1.1	Optimum Antenna Element Spacing	129
6.1.2	Numerical Results	133
6.2	Receive Diversity Performance	137
6.2.1	Numerical Results	139
6.3	Combined Diversity and Beamforming Performance	140
6.3.1	Numerical Results	140
6.4	Choosing a Spatial Processing Technique	142
6.5	Multiuser Modulation Schemes	147
6.6	Summary	151
7.	MULTIUSER DETECTION	153
7.1	Multiuser Detection	154
7.2	System Model for Detection	155
7.3	One-Shot Detection Techniques	157
7.3.1	Conventional Detection	157
7.3.2	Optimal Detection	160
7.3.3	Linear Detection	162
7.3.3.1	Decorrelating Detector	162
7.3.3.2	MMSE Detector	163
7.3.3.3	Adaptive MMSE Detection	165
7.3.4	Decorrelating Decision Feedback Detector	167
7.4	Interference Cancellation Techniques	167
7.4.1	Linear Interference Cancellation	170
7.4.1.1	Jacobi Inner Iteration	171
7.4.1.2	Gauss-Seidel Inner Iteration	172
7.4.2	Non-linear Interference Cancellation	173
7.5	Joint Decoding for Coded CDMA	173
7.6	Numerical Examples for Interference Cancellation	175
7.6.1	Interference Cancellation over an AWGN channel	176

7.6.2	Interference Cancellation over UMTS Multi-path Channel Model	179
7.7	Summary	181
8.	SPACE-TIME CODED TRANSMIT DIVERSITY FOR CDMA	183
8.1	Space-time Coded Multiple Access	184
8.2	Turbo Coding	187
8.2.1	Turbo Encoding	188
8.2.2	Turbo Decoding	188
8.2.3	Turbo Code Performance	189
8.2.3.1	Turbo Interleaver/Permuter	189
8.2.3.2	Constituent Encoder	191
8.2.3.3	Puncturing	191
8.2.3.4	Decoding Algorithm	191
8.3	Space-time Coded System Model	191
8.4	Layered Space-time Codes	193
8.4.1	Low Rate Code Extension	195
8.5	Performance Evaluation	196
8.5.1	Convolutional Code Bounds	196
8.5.1.1	Evaluation of $P_d(c \rightarrow \hat{c})$	198
8.5.2	Turbo Code Bounds	201
8.6	Analytical Results	202
8.6.1	AWGN Performance	202
8.6.2	Fading Channel Multiuser Performance	204
8.6.3	CDTD and TDTD Comparison	206
8.6.4	Effects of Fading Correlation	206
8.7	Simulation Performance	211
8.8	Space-time Code Extensions	214
8.8.1	Turbo Transmit Diversity	214
8.8.1.1	Rate- $1/(Z+1)$ Turbo Encoding	214
8.8.1.2	Puncturing and Multiplexing	215
8.8.1.3	Iterative Decoding	216
8.8.2	Super-orthogonal Turbo Transmit Diversity	218
8.9	Summary	220
	Appendices	221
A-	List of Abbreviations	221
B-	List of Symbols	227
C-	Typical Power Delay Profiles	235
D-	Correlated Multivariate Gamma Distribution	237
D.1	Correlated Multivariate Gamma Distribution	237
D.1.1	Example	239
D.1.2	Special Case	240
E-	Turbo Code Input-Output CPDF	243
E.1	Input-Output Weight Enumerator Recursion	243
E.2	Input-Output Conditional Probability Density Function	244

F- Turbo Decoding	247
F.1 Turbo Decoding	247
F.1.1 Extrinsic and Intrinsic Information	248
F.1.1.1 Extrinsic Information	248
F.1.1.2 Intrinsic Information	248
F.1.2 Soft-Input/Soft-Output Decoding Algorithm	248
F.2 Iterative Decoding Algorithms	250
F.2.1 Maximum A Posteriori Algorithm	250
F.2.1.1 Calculation of Branch-Metric, γ	251
F.2.1.2 Calculation of Forward Recursion, α and Backward Recursion, β	252
F.2.1.3 LLR Calculation, Λ	253
F.2.1.4 Tail Termination	254
G- WCDMA Simulation Environment: Physical Layer	257
G.1 Uplink Description Summary	258
G.2 Downlink Description Summary	261
H- WCDMA Simulation Environment	263
H.1 Link Level Simulation	263
H.1.1 Monte-Carlo Simulation Technique	266
H.1.2 General Simulation Assumptions	266
H.1.3 Simulation Cases	267
H.2 MATLAB Simulation Software	268
H.2.1 Getting Started	268
H.2.2 Main Simulation Window	268
H.2.3 Simulation Environment Configuration	268
H.2.4 Example	271
