Preface and Publishers' note xxiii

Chapter 1 An Overview of Additives 1

Chapter 2 Types of Additive and the Main Technical Trends 5
2.1 Current Lines of Development 5
2.1.1 Fillers 6
2.1.2 Pigments 7
2.1.3 Plasticizers 7
2.1.4 Stabilizers 8
2.1.5 Flame retardants 8
2.2 Special Additives 9
2.2.1 Antistatic and conductive additives 9
2.2.2 Food contact and medical additives 9
2.2.3 Clarifiers, nucleating agents, compatibilizers 10
2.3 Multi-functional Formulations 10
2.4 Masterbatches 10
2.5 Dendritic Polymers 11

Chapter 3 The World Market 13
3.1 World Consumption of Additives 13
3.2 The Market for Masterbatch 15
3.3 Overall Commercial Trends 15
3.4 Growth of Specialist Compounders 16
3.5 Regional Factors 16

Chapter 4 Modifying Specific Properties: Mechanical Properties – Fillers 19
4.1 Effect of Fillers 21
4.1.1 Mechanical properties 21
4.1.2 Thermal properties 21
4.1.3 Moisture content 21
4.1.4 Reinforcement mechanism of fillers 21

4.2	Factors for Compounding		22
	4.2.1	Aggregation of fillers	23
4.3	Types of Fillers		24
	4.3.1	Calcium carbonate	24
	4.3.2	Kaolin	26
	4.3.3	Magnesium hydroxide (talc)	26
	4.3.4	Wollastonite	27
	4.3.5	Silica	27
	4.3.6	Metal powders	28
	4.3.7	Microspheres	28
	4.3.8	Expandable microspheres	29
	4.3.9	Cellulose fillers	30
4.4	Surface Modification		30
	4.4.1	Particle geometry	30
	4.4.2	Coating	31
4.5	Nano-technology		32
	4.5.1	Processing nano-composites	32
4.6	Commercial Trends		35

Chapter 5 **Modifying Specific Properties: Mechanical Properties – Reinforcements** 37

5.1	Fibres: The Basic Properties		39
5.2	Types of Reinforcing Fibre		40
	5.2.1	Aramid fibres	40
	5.2.2	Carbon or graphite fibres	41
	5.2.3	Glass fibre	43
		5.2.3.1 E-CR glass	45
		5.2.3.2 Other developments	46
		5.2.3.3 Forms of glass fibre	47
		5.2.3.4 Chopped/milled products	47
	5.2.4	Polyester fibre	48
	5.2.5	Polyethylene fibre	48
	5.2.6	Hybrid fibres	49
5.3	Other Fibres		49
	5.3.1	Asbestos fibre	49
	5.3.2	Boron fibre	49
	5.3.3	Nylon fibre	49
5.4	Natural Fibres		50
5.5	Forms of Reinforcement		51
5.6	Long-fibre Reinforcement		51
5.7	New Developments		53
	5.7.1	Polyurethane/long fibres	54
	5.7.2	ABS/long fibres	54
	5.7.3	Shaped fibres	54
5.8	Commercial Trends		55

Chapter 6 Modifying Specific Properties: Appearance – Colorants, Pigments, Dyes, Special Effects 57
6.1 Main Types of Pigment and Colorant 58
6.1.1 Mixed metal oxides 58
6.1.2 Dyes 58
6.1.3 Liquid colours 59
6.2 Addition of Colorants 60
6.3 Replacement of Cadmium 61
6.4 Pigments for Special Effects 62
6.4.1 Aluminium pigments 63
6.4.2 Pearlescents 63
6.4.3 Light interference pigments 63
6.4.4 Fluorescents 64
6.4.5 Thermochromic and photochromic pigments 64
6.4.5.1 'Intelligent' heat protection for food products 65
6.4.5.2 High-performance dyes for CD manufacture 65
6.4.5.3 Solar heat 65
6.5 Laser Marking 66
6.6 Pigment Dispersants 66
6.7 Multi-functional Systems 67
6.8 Pigments for Engineering Plastics 67
6.9 The Effect of Pigments on Dimensions 68
6.10 Colorants for Food and Medicals 69
6.11 Recent Developments 69
6.11.1 Colour strength 69
6.11.2 Weathering 69
6.11.3 Natural effects 70
6.11.4 New forms of pigment 70
6.11.5 Surface treatment 70
6.11.6 New pigment chemistry 70
6.12 Market Trends 71

Chapter 7 Modifying Specific Properties: Appearance – Black and White Pigmentation 73
7.1 Types of White Pigment 73
7.1.1 Titanium dioxide 73
7.1.1.1 Surface treatments 74
7.1.1.2 Titanium dioxide grades 76
7.1.1.3 Opacity and tinting strength 76
7.1.1.4 Colour 78
7.1.2 Zinc sulphide 78
7.1.3 Other white pigments and extenders 80
7.1.3.1 Aluminium silicates 80
7.1.3.2 Barium sulphate ('blanc fixe') 80

7.1.3.3 Calcium silicate 80
7.1.3.4 Magnesium silicate 81
7.1.4 White masterbatch 82
7.1.5 New developments 82
7.2 Black Pigments 84
7.2.1 Types of carbon black 84
7.2.1.1 Thermal oxidative decomposition processes 85
7.2.1.2 Thermal decomposition processes 86
7.2.1.3 Effect of particle size and structure on properties of carbon blacks 86
7.2.1.4 Testing for properties: structure – effect and determination 87
7.2.2 Other black pigments 89
7.2.3 Black masterbatch 90
7.2.4 Recent developments 91
7.3 Commercial Trends: Titanium Dioxide 92
7.4 Commercial Trends: Carbon Black 92

Chapter 8 Modifying Specific Properties: Resistance to Heat – Heat Stabilizers 93
8.1 How They Work 93
8.2 Antioxidants 95
8.2.1 Primary antioxidants 95
8.2.2 Secondary antioxidants 96
8.3 Blends 97
8.4 Replacement of Heavy Metals 97
8.4.1 Organotins 98
8.5 Effect of Silica on the Activity of Stabilizers 99
8.6 Benzoxazolone Derivatives for PVC 100
8.7 New Chemistry for Stabilizers 100
8.7.1 Lactone chemistry 100
8.7.2 Vitamin E 102
8.8 Recent Developments 103
8.8.1 Pipes and fittings 103
8.8.2 Foamed pipe 104
8.8.3 Cable insulation 104
8.8.4 Medical products 104
8.9 Other Stabilizers 105
8.10 Commercial Trends 105

Chapter 9 Modifying Specific Properties: Resistance to Light – UV Stabilizers 107
9.1 How They Work 107
9.2 UV Screening Pigments 108
9.3 Absorbers 109
9.4 Energy Transfer Agents/Quenchers 109

9.5 Scavengers: Hindered Amine Light Stabilizers 109
9.6 Synergists with HALS 110
9.7 Polymeric Stabilizers 111
9.8 Blends 111
9.9 Replacement of Heavy Metals 111
9.10 Selection of Antioxidants for Use with UV Stabilizers 112
9.11 Concentrates, Masterbatches 113
9.12 New Chemistry 113
9.13 Recent Developments 113

Chapter 10 Modifying Specific Properties: Flammability – Flame Retardants 115
10.1 How They Work 115
10.2 Summary of FR additives 116
10.2.1 Reactive FRs 118
10.2.2 Additive FRs 118
10.2.2.1 Inorganics 118
10.3 Halogenated Compounds 120
10.3.1 Chlorinated compounds 121
10.3.2 Brominated compounds 122
10.4 Other Flame Retardants 123
10.4.1 Melamine cyanurate (MC) 123
10.4.2 Zinc borate 124
10.4.3 Zinc hydroxystannate (ZHS) and zinc stannate (ZS) 125
10.4.4 Zinc sulphide 125
10.4.5 Metal hydrates 125
10.5 Phosphorus 126
10.6 Intumescent Flame Retardants 127
10.7 Halogen-free Systems 128
10.7.1 Wire and cable compounds 129
10.8 Combinations of Flame Retardants 130
10.9 Synergistic Reactions 132
10.10 Health and the Environment 135
10.11 Recycling 136
10.12 New Developments 137
10.13 Nano-composites 138
10.14 Commercial Trends 139

Chapter 11 Modifying Specific Properties: Conductivity – Antistatic/Conductive Additives 141
11.1 Classification of Antistatic Additives 143
11.2 Conductive Additives 143
11.3 ESD (Electrostatic Discharge) Compounds 144
11.4 EMI (Electromagnetic Interference) Compounds 144
11.5 Metallic Additives 144
11.6 Coated Polymers 147

11.7 Intrinsically Conductive Materials 148
11.8 Moulded Circuitry 148
11.9 Recent Developments 149

Chapter 12 Modifying Processing Characteristics: Curing and Cross-linking 151
12.1 The Curing Process 151
12.2 Terminology 152
12.3 Curing Agents, Accelerators 152
12.4 Inhibitors 153
12.5 Curing with Accelerators 154
12.6 Curing without Accelerators 154
12.7 Selecting a Curing System 155
12.8 Curing Agents for Epoxy Systems 157
12.9 Cure Promoters 160
12.10 UV Cure Initiators 160
12.11 New Developments 160
12.12 Thermoplastics Cross-linking 162
12.13 Commercial Trends 164

Chapter 13 Modifying Processing Characteristics: Coupling, Compatibilizing Agents 167
13.1 New Developments 168

Chapter 14 Modifying Processing Characteristics: Plasticizers 169
14.1 The Function of Plasticizers 169
14.2 Main Types of Plasticizers 170
14.2.1 Phthalates 170
14.2.2 Sebacates and adipates 171
14.2.3 Fatty acid esters 171
14.2.4 Oligomeric/polymeric plasticizers 172
14.2.5 Epoxies 173
14.3 Extenders and Secondary Plasticizers 173
14.4 Health and Safety of Plasticizers 173
14.5 Reducing the Level of Plasticizers 174
14.6 Recent Developments 175
14.7 Commercial Trends 175

Chapter 15 Modifying Processing Characteristics: Blowing Agents 177
15.1 The Function of Blowing Agents 177
15.2 Physical Blowing Agents 178
15.3 Chemical Blowing Agents (CBAs) 179
15.4 Structural Foams 180
15.4.1 In-house gas generation 181
15.4.2 Nucleating agents 181
15.4.3 Dispersion agents 181
15.5 Syntactic Structural Foam 181

15.6 Replacement of CFCs 182
15.6.1 Flexible foams 183
15.6.2 Rigid foams 183
15.6.3 Pentane 184
15.6.4 Expanded polystyrene 185
15.6.5 Economics of CFC replacement 186
15.6.6 Testing the insulation value of blowing agents 186
15.7 New Developments 186
15.7.1 Liquid carbon dioxide 187

Chapter 16 Modifying Processing Characteristics: Modifiers and Processing Aids 189
16.1 Impact Modification 189
16.1.1 Impact modifiers for PVC 190
16.1.1.1 MBS modifiers 190
16.1.1.2 ABS modifiers 190
16.1.1.3 Acrylic modifiers 191
16.2 Elastomer Modification 192
16.2.1 Acrylic rubber 193
16.2.2 Styrenics 193
16.2.3 Polyolefins 194
16.2.4 Polybutene 195
16.3 Dimer Acids 195
16.4 Calcium Carbonate 196
16.5 Modification of CPEE Polymers 196
16.6 Modification of PMMA with Silicon and Phosphorus 197
16.7 Impact Modifiers for Thermosetting Resins 197
16.8 Processing Aids 198
16.8.1 Low-temperature flexibility 200
16.9 Clarifying/Nucleating Agents 200
16.10 Fluoropolymers 202
16.11 New Developments 203
16.11.1 Core–shell rubbers 203
16.11.2 Silicones 204
16.11.3 Modification of engineering thermoplastics 204

Chapter 17 Modifying Processing Characteristics: Lubricants, Mould Release Agents, Anti-slip and Anti-blocking 205
17.1 Lubricants for Performance Improvement 205
17.2 Lubricants as Processing Aids 206
17.2.1 Metallic stearates 207
17.2.2 Hydrocarbons 207
17.2.3 Fatty acid amides and esters 208
17.2.5 Polyolefin waxes 210
17.2.6 Polyamides 210
17.2.7 Fluoropolymers 211

17.2.8 Silicones 212
17.2.9 Boron nitride 213
17.3 Combination and Modification 213
17.4 Release Agents for Thermosets 214
17.5 Anti-blocking, Anti-slip Additives 216
17.6 New Developments 216

Chapter 18 Other Types of Additive: Miscellaneous Additives 219
18.1 Anti-bacterials and Biocides 219
18.1.1 Anti-allergy agent 221
18.2 Degradation Additives 221
18.3 Shrinkage Modifiers, Low-profile Additives 222
18.4 Improved Barrier Properties 222
18.4.1 Gas barrier coating 223
18.4.2 Resorcinol additives 223
18.4.3 Plasma technology 224
18.4.4 Oxygen absorption in food packaging 224
18.5 Hard Coatings 225
18.6 Thermal Insulation 225
18.7 Fragrance 226
18.8 PVC Matting Agent 226
18.9 Anti-fogging 226
18.10 Acoustic Insulation 227
18.11 Surfactants, Foam Control Additives 228
18.12 Mould Treatment Agents 229

Chapter 19 Other Types of Additive: Additives for Rubber 231
19.1 Guidance on Safety 233
19.2 New Developments 233
19.2.1 Silica 233

Chapter 20 Other Types of Additive: Additives for Recycling 237
20.1 Stabilizing, Re-stabilizing 237
20.2 Stabilizers 238
20.3 Improvement of Properties 239
20.3.1 Fibres/compatibilizers/impact modifiers 239
20.4 Desiccants 239
20.5 PE/PVC Compatibilizing 240
20.6 Melt Flow/Viscosity Modification 240
20.7 Additives for Identification of Plastics 241
20.8 Equipment for Recycling 244

Chapter 21 Background Information: Equipment – Mixing, Compounding, and Dosing 245
21.1 Incorporation of Additives 245
21.2 Mixing Thermosets 246

21.3 Mixing Thermoplastics 247
21.3.1 Dry mixers 247
21.3.2 Calendering 248
21.3.3 Extrusion compounding 248
21.3.4 Compounding mineral fillers 249
21.3.5 Fine talc masterbatch 249
21.3.6 Single- and twin-screw extruders 250
21.3.7 Adjustable screw geometry 251
21.4 Colour Dosing 252
21.5 Recent Developments 253

Chapter 22 Background Information: Health and Safety 257
22.1 Hazards by Additive 257
22.1.1 Carbon black 257
22.1.2 Titanium dioxide 258
22.1.3 Flame retardants 259
22.1.4 Glass fibre 259
22.1.5 Styrene monomer 259
22.1.6 Isocyanates 260
22.2 Hazards During Production, Storage, and Transportation (Workers) 260
22.2.1 Fire/explosion 261
22.2.2 Emissions 261
22.2.3 Skin/body contact 261
22.2.4 Dust 262
22.3 Hazards During Use (Direct Consumer and General Public) 262
22.3.1 Toxicity – food contact 263
22.3.2 Flame retardants 263
22.3.3 Plasticizers 264
22.4 Hazards During Disposal (Workers and General Public) 266
22.4.1 Landfill – heavy metals 266
22.4.2 Incineration 267
22.5 Health and Safety at the Workplace: Some Guidelines 267
22.5.1 Reduction of emissions at the workplace 268
22.6 New Developments: Solvents 268

Chapter 23 Background Information: Legislation and Testing 269
23.1 Blowing Agents 269
23.2 Flame Retardants 269
23.2.1 Halogenated and brominated flame retardants 271
23.3 Heavy Metals/Cadmium Pigments 271
23.4 Plasticizers 272
23.5 Food Packaging 273
23.6 Migration Levels 274

23.7 Moves to Establish a Threshold of Regulatory Concern (TRC) 276
23.7.1 US history 276
23.7.2 European history 276
23.8 The User's Viewpoint 277
23.9 Medical Products and Packaging 277
23.10 Waste and Recycling 277
23.10.1 Packaging 278
23.10.2 Electrical and electronics 278
23.10.3 Automobiles 279
23.11 Physical Testing 279
23.11.1 Mechanical tests 280
23.11.1.1 Tensile strength and modulus 280
23.11.1.2 Flexural strength and modulus (ISO 178 and ISO 3597) 280
23.11.1.3 Compressive strength (ISO 3604) 280
23.11.1.4 Shear strength 281
23.11.1.5 Impact strength 281
23.11.2 Thermal testing 282
23.11.2.1 Heat stability 282
23.11.2.2 Light stability 283
23.11.3 Electrical properties 283
23.11.3.1 Surface and volume resistivity 283
23.11.3.2 Surface resistivity 283
23.11.3.3 Electrostatic discharge 284
23.11.3.4 Static decay 284
23.11.4 Flammability 284
23.11.5 Heat release 286
23.11.6 Ease of ignition 286
23.11.6.1 Calorific value: ISO 1716 – calorific value of materials 286
23.11.6.2 Flame spread 286
23.11.7 Smoke tests 287
23.11.7.1 AS 1530: Part 3 – test for early fire hazard properties of materials 288
23.11.7.2 DIN 4102 Part 1 – B1 – Brandschacht test 288
23.11.7.3 VDE 0472 Part 804 288
23.11.7.4 FAR Part 25: Federal Aviation Regulations for materials used in aircraft 288
23.11.8 Fire tests for building materials 288
23.11.9 Combustibility 289
23.11.10 Floor covering 290

23.11.11 New developments 292
23.11.12 Analysis 292
23.11.13 Surface quality tests 292
23.11.13.1 Barcol hardness test 292
23.11.13.2 Acetone sensitivity 293
23.11.13.3 Surface analysis 293
23.11.14 Colour testing 293
23.11.14.1 Colour stability 294
23.12 Database 294
