Process Modelling and Model Analysis

PROCESS SYSTEMS ENGINEERING

Volume 4

CONTENTS

INTRODUCTION xiii

I FUNDAMENTAL PRINCIPLES AND PROCESS MODEL DEVELOPMENT

I The Role of Models in Process Systems Engineering

- 1.1. The Idea of a Model 4
- 1.2. Model Application Areas in PSE 7
- 1.3. Model Classification 10
- 1.4. Model Characteristics 12
- 1.5. A Brief Historical Review of Modelling in PSE 13
- 1.6. Summary 17
- 1.7. Review Questions 17
- 1.8. Application Exercises 17

2 A Systematic Approach to Model Building

- 2.1. The Process System and the Modelling Goal 20
- 2.2. Mathematical Models 22
- 2.3. A Systematic Modelling Procedure 24
- 2.4. Ingredients of Process Models 32
- 2.5. Summary 36
- 2.6. Review Questions 36
- 2.7. Application Exercises 37

3 Conservation Principles

- 3.1. Thermodynamic Principles of Process Systems 42
- 3.2. Principle of Conservation 51
- 3.3. Balance Volumes in Process System Applications 58
- 3.4. Summary 61
- 3.5. Review Questions 62
- 3.6. Application Exercises 62

4 Constitutive Relations

- 4.1. Transfer Rate Equations 65
- 4.2. Reaction Kinetics 70
- 4.3. Thermodynamical Relations 72
- 4.4. Balance Volume Relations 75
- 4.5. Equipment and Control Relations 75
- 4.6. Summary 79
- 4.7. Review Questions 79
- 4.8. Application Exercises 80

5 Dynamic Models—Lumped Parameter Systems

- 5.1. Characterizing Models and Model Equation Sets 83
- 5.2. Lumped Parameter Models—Initial Value Problems (IVPs) 84
- 5.3. Conservation Balances for Mass 86
- 5.4. Conservation Balances for Energy 89
- 5.5. Conservation Balances for Momentum 95
- 5.6. The Set of Conservation Balances for Lumped Systems 98
- 5.7. Conservation Balances in Intensive Variable Form 99
- 5.8. Dimensionless Variables 101
- 5.9. Normalization of Balance Equations 102
- 5.10. Steady-State Lumped Parameter Systems 103

- 5.11. Analysis of Lumped Parameter Models 104
- 5.12. Stability of the Mathematical Problem 114
- 5.13. Summary 117
- 5.14. Review Questions 118
- 5.15. Application Exercises 118

6 Solution Strategies for Lumped Parameter Models

- 6.1. Process Engineering Example Problems 124
- 6.2. Ordinary Differential Equations 125
- 6.3. Basic Concepts in Numerical Methods 126
- 6.4. Local Truncation Error and Stability 129
- 6.5. Stability of the Numerical Method 133
- 6.6. Key Numerical Methods 137
- 6.7. Differential-Algebraic Equation Solution Techniques 149
- 6.8. Summary 155
- 6.9. Review Questions 156
- 6.10. Application Exercises 156

7 Dynamic Models—Distributed Parameter Systems

- 7.1. Development of DPS Models 163
- 7.2. Examples of Distributed Parameter Modelling 174
- 7.3. Classification of DPS Models 182
- 7.4. Lumped Parameter Models for Representing DPSs 185
- 7.5. Summary 186
- 7.6. Review Questions 187
- 7.7. Application Exercises 187

8 Solution Strategies for Distributed Parameter Models

- 8.1. Areas of Interest 191
- 8.2. Finite Difference Methods 192
- 8.3. Method of Lines 201
- 8.4. Method of Weighted Residuals 203
- 8.5. Orthogonal Collocation 206
- 8.6. Orthogonal Collocation for Partial Differential Equations 216
- 8.7. Summary 218
- 8.8. Review Questions 218
- 8.9. Application Exercises 219

9 Process Model Hierarchies

- 9.1. Hierarchy Driven by the Level of Detail 225
- 9.2. Hierarchy Driven by Characteristic Sizes 233
- 9.3. Hierarchy Driven by Characteristic Times 239
- 9.4. Summary 245
- 9.5. Further Reading 246
- 9.6. Review Questions 246
- 9.7. Application Exercises 246

II ADVANCED PROCESS MODELLING AND MODEL ANALYSIS

10 Basic Tools for Process Model Analysis

- 10.1. Problem Statements and Solutions 251
- 10.2. Basic Notions in Systems and Control Theory 253
- 10.3. Lumped Dynamic Models as Dynamic System Models 264
- 10.4. State Space Models and Model Linearization 269
- 10.5. Structural Graphs of Lumped Dynamic Models 277
- 10.6. Summary 281
- 10.7. Review Questions 281
- 10.8. Application Exercises 282

11 Data Acquisition and Analysis

- 11.1. Sampling of Continuous Time Dynamic Models 286
- 11.2. Data Screening 289
- 11.3. Experiment Design for Parameter Estimation of Static Models 294
- 11.4. Experiment Design for Parameter Estimation of Dynamic Models 295
- 11.5. Summary 296
- 11.6. Further Reading 296
- 11.7. Review Questions 296
- 11.8. Application Exercises 297

12 Statistical Model Calibration and Validation

- 12.1. Grey-Box Models and Model Calibration 300
- 12.2. Model Parameter and Structure Estimation 302
- 12.3. Model Parameter Estimation for Static Models 314
- 12.4. Identification: Model Parameter and Structure Estimation of Dynamic Models 318
- 12.5. CSTR: A Case Study of Model Parameter Estimation 323
- 12.6. Statistical Model Validation via Parameter Estimation 330

- 12.7. Summary 331
- 12.8. Further Reading 331
- 12.9. Review Questions 331
- 12.10. Application Exercises 332

13 Analysis of Dynamic Process Models

- 13.1. Analysis of Basic Dynamical Properties 336
- 13.2. Analysis of Structural Dynamical Properties 341
- 13.3. Model Simplification and Reduction 350
- 13.4. Summary 359
- 13.5. Further Reading 359
- 13.6. Review Questions 360
- 13.7. Application Exercises 361

14 Process Modelling for Control and Diagnostic Purposes

- 14.1. Model-Based Process Control 364
- 14.2. Model-Based Process Diagnosis 370
- 14.3. Qualitative, Logical and AI Models 372
- 14.4. Summary 384
- 14.5. Further Reading 384
- 14.6. Review Questions 385
- 14.7. Application Exercises 385

15 Modelling Discrete Event Systems

- 15.1. Characteristics and Issues 388
- 15.2. Approaches to Model Representation 388
- 15.3. Solution of Discrete Event Dynamic System Models 404
- 15.4. Analysis of Discrete Event Systems 408
- 15.5. Summary 410
- 15.6. Further Reading 411
- 15.7. Review Questions 412
- 15.8. Application Exercises 412

16 Modelling Hybrid Systems

- 16.1. Hybrid Systems Basics 415
- 16.2. Approaches to Model Representation 420
- 16.3. Analysis of Hybrid Systems 430
- 16.4. Solution of Hybrid System Models 431
- 16.5. Summary 434
- 16.6. Further Reading 434

- 16.7. Review Questions 435
- 16.8. Application Exercises 436

17 Modelling Applications in Process Systems

- 17.1. Copper Converter Dynamics 438
- 17.2. Destruction of Phenol in Wastewater by
Photochemical Reaction 445
- 17.3. Prefermenter System for Wastewater Treatment 451
- 17.4. Granulation Circuit Modelling 456
- 17.5. Industrial Depropanizer using Structural Packing 462
- 17.6. Summary 469

18 Computer Aided Process Modelling

- 18.1. Introduction 472
- 18.2. Industrial Demands on Computer Aided Modelling Tools 472
- 18.3. Basic Issues in CAPM Tools 474
- 18.4. Approaches to CAPM Tool Development 483
- 18.5. Summary 492

19 Empirical Model Building

- 19.1. Introduction 493
- 19.2. The Modelling Procedure Revisited 494
- 19.3. Black-Box Modelling 497
- 19.4. Traps and Pitfalls in Empirical Model Building 511
- 19.5. Summary 515
- 19.6. Further Reading 515
- 19.7. Review Questions 516
- 19.8. Application Exercises 516

Appendix: Basic Mathematic Tools 517

- A.1. Random Variables and Their Properties 517
- A.2. Hypothesis Testing 521
- A.3. Vector and Signal Norms 522
- A.4. Matrix and Operator Norms 523
- A.5. Graphs 524
