

Discrete-time Stochastic Systems

T. Söderström

Springer

Contents

1. Introduction	1
1.1 What is a Stochastic System?	1
Bibliography	5
2. Some Probability Theory	7
2.1 Introduction	7
2.2 Random Variables and Distributions	7
2.2.1 Basic Concepts	7
2.2.2 Gaussian Distributions	11
2.2.3 Correlation and Dependence	12
2.3 Conditional Distributions	12
2.4 The Conditional Mean for Gaussian Variables	14
2.5 Complex-Valued Gaussian Variables	17
2.5.1 The Scalar Case	17
2.5.2 The Multivariable Case	19
2.5.3 The Rayleigh Distribution	24
Exercises	26
Bibliography	27
3. Models	29
3.1 Introduction	29
3.2 Stochastic Processes	30
3.3 Markov Processes and the Concept of State	33
3.4 Covariance Function and Spectrum	36
3.5 Bispectrum	46
3.A Appendix. Linear Complex-Valued Signals and Systems	48
3.A.1 Complex-Valued Model of a Narrow-Band Signal	48
3.A.2 Linear Complex-Valued Systems	49
3.B Appendix. Markov Chains	51
Exercises	55
Bibliography	58

4. Analysis	59
4.1 Introduction	59
4.2 Linear Filtering	59
4.2.1 Transfer Function Models	59
4.2.2 State Space Models	61
4.2.3 Yule-Walker Equations	67
4.3 Spectral Factorization	71
4.3.1 Transfer Function Models	71
4.3.2 State Space Models	74
4.3.3 An Example	78
4.4 Continuous-time Models	80
4.4.1 Covariance Function and Spectra	80
4.4.2 Spectral Factorization	81
4.4.3 White Noise	82
4.4.4 Wiener Processes	83
4.4.5 State Space Models	84
4.5 Sampling Stochastic Models	86
4.5.1 Introduction	86
4.5.2 State Space Models	87
4.5.3 Aliasing	88
4.6 The Positive Real Part of the Spectrum	90
4.6.1 ARMA Processes	90
4.6.2 State Space Models	95
4.6.3 Continuous-time Processes	98
4.7 Effect of Linear Filtering on the Bispectrum	99
4.8 Algorithms for Covariance Calculations and Sampling	103
4.8.1 ARMA Covariance Function	103
4.8.2 ARMA Cross-Covariance Function	105
4.8.3 Continuous-Time Covariance Function	107
4.8.4 Sampling	108
4.8.5 Solving the Lyapunov Equation	110
4.A Appendix. Auxiliary Lemmas	111
Exercises	114
Bibliography	121
5. Optimal Estimation	123
5.1 Introduction	123
5.2 The Conditional Mean	123
5.3 The Linear Least Mean Square Estimate	126
5.4 Propagation of the Conditional Probability Density Function	128
5.5 Relation to Maximum Likelihood Estimation	130
5.A Appendix. A Lemma for Optimality of the Conditional Mean	133
Exercises	134
Bibliography	135

6. Optimal State Estimation for Linear Systems	137
6.1 Introduction	137
6.2 The Linear Least Mean Square One-Step Prediction and Filter Estimates	138
6.3 The Conditional Mean	145
6.4 Optimal Filtering and Prediction	147
6.5 Smoothing	148
6.5.1 Fixed Point Smoothing	149
6.5.2 Fixed Lag Smoothing	150
6.6 Maximum <i>a posteriori</i> Estimates	153
6.7 The Stationary Case	155
6.8 Algorithms for Solving the Algebraic Riccati Equation	159
6.8.1 Introduction	159
6.8.2 An Algorithm Based on the Euler Matrix	161
6.A Appendix. Proofs	165
6.A.1 The Matrix Inversion Lemma	165
6.A.2 Proof of Theorem 6.1	166
6.A.3 Two Determinant Results	171
Exercises	171
Bibliography	182
 7. Optimal Estimation for Linear Systems by Polynomial Methods	 185
7.1 Introduction	185
7.2 Optimal Prediction	185
7.2.1 Introduction	185
7.2.2 Optimal Prediction of ARMA Processes	187
7.2.3 A General Case	191
7.2.4 Prediction of Nonstationary Processes	193
7.3 Wiener Filters	194
7.3.1 Statement of the Problem	194
7.3.2 The Unrealizable Wiener Filter	196
7.3.3 The Realizable Wiener Filter	197
7.3.4 Illustration	199
7.3.5 Algorithmic Aspects	200
7.3.6 The Causal Part of a Filter, Partial Fraction Decomposition and a Diophantine Equation	202
7.4 Minimum Variance Filters	205
7.4.1 Introduction	205
7.4.2 Solution	206
7.4.3 The Estimation Error	207
7.4.4 Extensions	209
7.4.5 Illustrations	211
7.5 Robustness Against Modelling Errors	215
Exercises	218

Bibliography	220
8. Illustration of Optimal Linear Estimation	223
8.1 Introduction	223
8.2 Spectral Factorization	223
8.3 Optimal Prediction	225
8.4 Optimal Filtering	227
8.5 Optimal Smoothing	228
8.6 Estimation Error Variance	232
8.7 Weighting Pattern	234
8.8 Frequency Characteristics	235
Exercises	242
9. Nonlinear Filtering	245
9.1 Introduction	245
9.2 Extended Kalman Filters	245
9.2.1 The Basic Algorithm	245
9.2.2 An Iterated Extended Kalman Filter	247
9.2.3 A Second-order Extended Kalman Filter	248
9.2.4 An Example	250
9.3 Gaussian Sum Estimators	254
9.4 The Multiple Model Approach	257
9.4.1 Introduction	257
9.4.2 Fixed Models	257
9.4.3 Switching Models	259
9.4.4 Interacting Multiple Models Algorithm	260
9.5 Monte Carlo Methods for Propagating the Conditional Probability Density Functions	265
9.6 Quantized Measurements	269
9.7 Median Filters	270
9.7.1 Introduction	270
9.7.2 Step Response	271
9.7.3 Response to Sinusoids	272
9.7.4 Effect on Noise	273
9.A Appendix. Auxiliary results	277
9.A.1 Analysis of the Sheppard Correction	277
9.A.2 Some Probability Density Functions	280
Exercises	281
Bibliography	294
10. Introduction to Optimal Stochastic Control	297
10.1 Introduction	297
10.2 Some Simple Examples	297
10.2.1 Introduction	297
10.2.2 Deterministic System	297

10.2.3 Random Time Constant	298
10.2.4 Noisy Observations	299
10.2.5 Process Noise	300
10.2.6 Unknown Time Constants and Measurement Noise	300
10.2.7 Unknown Gain	301
10.3 Mathematical Preliminaries	303
10.4 Dynamic Programming	304
10.4.1 Deterministic Systems	305
10.4.2 Stochastic Systems	306
10.5 Some Stochastic Controllers	311
10.5.1 Dual Control	313
10.5.2 Certainty Equivalence Control	313
10.5.3 Cautious Control	314
Exercises	316
Bibliography	317
11. Linear Quadratic Gaussian Control	319
11.1 Introduction	319
11.2 The Optimal Controllers	320
11.2.1 Optimal Control of Deterministic Systems	320
11.2.2 Optimal Control with Complete State Information	323
11.2.3 Optimal Control with Incomplete State Information	324
11.3 Duality Between Estimation and Control	326
11.4 Closed Loop System Properties	328
11.4.1 Representations of the Regulator	328
11.4.2 Representations of the Closed Loop System	329
11.4.3 The Closed Loop Poles	331
11.5 Linear Quadratic Gaussian Design by Polynomial Methods	332
11.5.1 Problem Formulation	332
11.5.2 Minimum Variance Control	333
11.5.3 The General Case	337
11.6 Controller Design by Linear Quadratic Gaussian Theory	344
11.6.1 Introduction	344
11.6.2 Choice of Observer Poles	351
11.A Appendix. Derivation of the Optimal Linear Quadratic Gaussian Feedback and the Riccati Equation from the Bellman Equation	360
Exercises	362
Bibliography	364
Answers to Selected Exercises	367
Index	373
