Organic Synthesis on Solid Phase

Supports, Linkers, Reactions

Second, Completely Revised and
Enlarged Edition

Contents

Glossary and Abbreviations XVII

Experimental Procedures XXIII

1 General Techniques and Analytical Tools for Solid-Phase Organic Synthesis 1

- 1.1 General Techniques for Performing Syntheses on Insoluble Supports 1
- 1.2 Strategies for Parallel Synthesis 4
- 1.3 Analytical Methods for Support-Bound Intermediates 6
 - 1.3.1 Combustion Analysis 6
 - 1.3.2 Colorimetric Assays 6
 - 1.3.3 Infrared Spectroscopy 9
 - 1.3.4 Mass Spectrometry 9
 - 1.3.5 Nuclear Magnetic Resonance Spectroscopy 9
- 1.4 Strategies for the Selection of Reactions and Reagents for Parallel Solid-Phase Synthesis 10

2 Supports for Solid-Phase Organic Synthesis 17

- 2.1 Polystyrene 18
 - 2.1.1 Microporous Styrene-Divinylbenzene Copolymers 18
 - 2.1.1.1 Swelling Behavior 19
 - 2.1.1.2 Chemical Stability 21
 - 2.1.1.3 Functionalization 21
 - 2.1.2 Macroporous Styrene-Divinylbenzene Copolymers 23
 - 2.1.3 Miscellaneous Polystyrenes 24
- 2.2 Poly(ethylene glycol)-Polystyrene Graft Polymers 25
- 2.3 Poly(ethylene glycol) 26
- 2.4 Polyacrylamides 27
- 2.5 Polyacrylamide-PEG Copolymers 29
- 2.6 Silica 29
- 2.7 Polysaccharides 30
- 2.8 Miscellaneous Supports 32

3	Linkers for Solid-Phase Organic Synthesis	39
3.1	Linkers for Carboxylic Acids	41
3.1.1	Linkers for Acids Cleavable by Acids or Other Electrophiles	41
3.1.1.1	Benzyl Alcohol Linkers	41
3.1.1.2	Diarylmethanol (Benzhydrol) Linkers	43
3.1.1.3	Trityl Alcohol Linkers	43
3.1.1.4	Non-Benzyl Alcohol Linkers	44
3.1.2	Linkers for Acids Cleavable by Bases or Nucleophiles	46
3.1.2.1	Benzyl Alcohol Linkers	46
3.1.2.2	Non-Benzyl Alcohol Linkers	48
3.1.2.3	Miscellaneous Linkers Cleavable by Bases or Nucleophiles	50
3.1.3	Photocleavable Linkers for Carboxylic Acids	51
3.1.4	Linkers for Acids Cleavable by Transition Metal Catalysis	54
3.1.5	Linkers for Acids Cleavable by Enzymes	56
3.2	Linkers for Thiocarboxylic, Boronic, Phosphonic, Phosphoric, and Sulfonic Acids	57
3.3	Linkers for Amides, Sulfonamides, Carbamates, and Ureas	59
3.3.1	Benzylamine Linkers	59
3.3.2	(Diarylmethyl)amine and Tritylamine Linkers	64
3.3.3	Linkers for Amides Cleavable by Nucleophiles	68
3.3.3.1	Nucleophilic Cleavage of Alkyl Esters	68
3.3.3.2	Nucleophilic Cleavage of Aryl Esters	70
3.3.3.3	Nucleophilic Cleavage of Oxime and Related Esters	71
3.3.3.4	Nucleophilic Cleavage of Amides and Carbamates	73
3.3.4	Miscellaneous Linkers for Amides and Ureas	75
3.4	Linkers for Hydroxamic Acids and Hydrazides	77
3.5	Linkers for Carboxylic Esters and Thiol Esters	79
3.5.1	Linkers for Esters Cleavable by Nucleophiles	79
3.5.2	Linkers for Esters Cleavable by Electrophiles or Oxidants	82
3.6	Linkers for Primary and Secondary Aliphatic Amines	83
3.6.1	Benzylamine, (Diarylmethyl)amine, and Tritylamine Linkers	84
3.6.2	Carbamate Attachment	87
3.6.3	Miscellaneous Linkers for Aliphatic Amines	89
3.7	Linkers for Tertiary Amines	91
3.8	Linkers for Aryl- and Heteroarylaminines	93
3.9	Linkers for Guanidines and Amidines	97
3.10	Linkers for Azoles	99
3.11	Linkers for Alcohols and Phenols	101
3.11.1	Attachment as Ethers	102
3.11.2	Attachment as Silyl Ethers	106
3.11.3	Attachment as Acetals	107
3.11.4	Attachment as Esters	109
3.11.5	Miscellaneous Linkers for Alcohols and Phenols	112
3.12	Linkers for Thiols	113

- 3.13 Linkers for Alkyl and Aryl Halides, Azides, Diazonium Salts, and Nitriles 115
- 3.14 Linkers for Aldehydes and Ketones 117
 - 3.14.1 Attachment as Enol Ethers, Enamines, Imines, and Hydrazones 119
 - 3.14.2 Attachment of Carbonyl Compounds as Acetals 119
 - 3.14.3 Miscellaneous Linkers for Aldehydes and Ketones 121
- 3.15 Linkers for Alkenes 122
 - 3.15.1 Linkers for Alkenes Cleavable by β -Elimination 123
 - 3.15.2 Linkers for Alkenes Cleavable by Olefin Metathesis and Miscellaneous Linkers for Alkenes 127
- 3.16 Linkers for Alkanes and Arenes 129
 - 3.16.1 Cleavage followed by Decarboxylation 130
 - 3.16.2 Cleavage of Silanes, Organogermanium, and Organoboron Compounds 131
 - 3.16.3 Reductive Cleavage of Carbon–Oxygen and Carbon–Nitrogen Bonds 135
 - 3.16.4 Reductive Cleavage of Carbon–Phosphorus, Carbon–Sulfur, and Carbon–Selenium Bonds 137
- 3.17 Non-Covalent Linkers 139
 - 3.17.1 Ion-Exchange Resins 139
 - 3.17.2 Transition Metal Complexes 139
 - 3.17.3 Miscellaneous Non-Covalent Linkers 140
- 4 Preparation of Organometallic Compounds 159
 - 4.1 Group I and II Organometallic Compounds 159
 - 4.2 Group III Organometallic Compounds 162
 - 4.3 Group IV Organometallic Compounds 163
 - 4.4 Transition Metal Complexes 165
- 5 Preparation of Hydrocarbons 169
 - 5.1 *Preparation of Alkanes* 169
 - 5.1.1 Preparation of Alkanes by Hydrolysis of Organometallic Compounds 169
 - 5.1.2 Preparation of Alkanes by Hydrogenation and Reduction 169
 - 5.1.3 Preparation of Alkanes by Carbon–Carbon Bond Formation 171
 - 5.1.3.1 Coupling Reactions with Group I Organometallic Compounds 171
 - 5.1.3.2 Coupling Reactions with Group II Organometallic Compounds 172
 - 5.1.3.3 Coupling Reactions with Boranes 173
 - 5.1.3.4 Coupling Reactions with Arylpalladium Compounds 174
 - 5.1.3.5 Alkylations with Alkyl Radicals 175
 - 5.1.3.6 Preparation of Cycloalkanes 176
 - 5.2 Preparation of Alkenes 177
 - 5.2.1 Preparation of Alkenes by β -Elimination and Reduction 177

XII Contents

- 5.2.2 Preparation of Alkenes by Carbonyl Olefination 178
 - 5.2.2.1 By Wittig Reaction 178
 - 5.2.2.2 By Aldol and Related Condensations 180
 - 5.2.2.3 By Other Carbonyl Olefinations 182
- 5.2.3 Preparation of Alkenes by Olefin Metathesis 182
- 5.2.4 Preparation of Alkenes by C-Vinylation 187
- 5.2.5 Preparation of Cycloalkenes by Cycloaddition 192
- 5.3 Preparation of Alkynes 195
- 5.4 Preparation of Biaryls 197

- 6 Preparation of Alkyl and Aryl Halides 205
 - 6.1 Preparation of Alkyl Halides 205
 - 6.2 Preparation of Aryl and Heteroaryl Halides 209

- 7 Preparation of Alcohols and Ethers 213
 - 7.1 Preparation of Alcohols 213
 - 7.1.1 By Reduction of Carbonyl Compounds 213
 - 7.1.2 By Addition of Carbon Nucleophiles to C=O Double Bonds 215
 - 7.1.3 Miscellaneous Preparations of Alcohols 219
 - 7.1.4 Protective Groups for Alcohols 221
 - 7.1.4.1 Protective Groups Cleavable by Acids 221
 - 7.1.4.2 Protective Groups Cleavable by Nucleophiles or Other Reagents 223
 - 7.2 Preparation of Ethers 225
 - 7.2.1 Preparation of Dialkyl Ethers 225
 - 7.2.2 Preparation of Alkyl Aryl Ethers 228
 - 7.2.3 Preparation of Diaryl Ethers 232

- 8 Preparation of Sulfur Compounds 239
 - 8.1 Preparation of Thiols 239
 - 8.2 Preparation of Thioethers 241
 - 8.3 Preparation of Sulfoxides and Sulfones 245
 - 8.4 Preparation of Sulfonamides and Sulfinamides 247
 - 8.5 Preparation of Sulfonic Esters 252
 - 8.6 Preparation of Sulfonium Salts 254

- 9 Preparation of Organoselenium Compounds 259

- 10 Preparation of Nitrogen Compounds 263
 - 10.1 Preparation of Amines 263
 - 10.1.1 Preparation of Amines by Aliphatic Nucleophilic Substitution 263
 - 10.1.1.1 With Support-Bound Alkylating Agents 263

- 10.1.1.2 By Alkylation of Support-Bound Amines 267
 - 10.1.2 Preparation of Amines by Aromatic Nucleophilic Substitution 269
 - 10.1.2.1 With Support-Bound Arylating Agents 269
 - 10.1.2.2 By Arylation of Support-Bound Amines 272
 - 10.1.3 Preparation of Amines by Addition of Amines to C=C Double and C≡C Triple Bonds 273
 - 10.1.4 Preparation of Amines by Reduction of Imines and Oximes 275
 - 10.1.5 Preparation of Amines by Reaction of Carbon Nucleophiles with Imines or Aminals 280
 - 10.1.6 Preparation of Amines by Reduction of Amides and Carbamates 282
 - 10.1.7 Preparation of Amines by Reduction of Nitro Compounds 283
 - 10.1.8 Preparation of Amines by Reduction of Azides 284
 - 10.1.9 Miscellaneous Preparations of Amines 285
 - 10.1.10 Protective Groups for Amines 287
 - 10.1.10.1 Carbamates 287
 - tert*-Butyl Carbamates (Boc Protection) 288
 - Other Acid-Labile Carbamates 290
 - Fluorenylmethyl Carbamates (Fmoc Protection) 291
 - Other Base-Labile Carbamates 292
 - Miscellaneous Carbamates 293
 - 10.1.10.2 Amides 294
 - 10.1.10.3 Cyclic Imides 296
 - 10.1.10.4 Enamines 296
 - 10.1.10.5 Imines 297
 - 10.1.10.6 *N*-Alkyl and *N*-Aryl Derivatives 298
 - 10.1.10.7 *N*-Sulfonyl and *N*-Sulfonyl Derivatives 299
 - 10.2 Preparation of Quaternary Ammonium Salts 300
 - 10.3 Preparation of Hydrazines and Hydroxylamines 301
 - 10.4 Preparation of Azides 303
 - 10.5 Preparation of Diazo Compounds 303
 - 10.6 Preparation of Nitro Compounds 305
- 11 Preparation of Phosphorus Compounds 313
- 11.1 Preparation of Phosphines 313
 - 11.2 Preparation of Phosphonic Acid Derivatives 314
 - 11.3 Preparation of Phosphinic Acid Derivatives 315
- 12 Preparation of Aldehydes and Ketones 317
- 12.1 Preparation of Aldehydes and Ketones by C-Acylation 317
 - 12.2 Preparation of Aldehydes and Ketones by Oxidation 319
 - 12.3 Miscellaneous Preparations of Aldehydes and Ketones 321

13	Preparation of Carboxylic Acid Derivatives	325
13.1	Preparation of Amides	325
13.1.1	Acylation of Amines with Isolated Acylating Agents	325
13.1.2	Acylation of Amines with Acylating Reagents Formed In Situ	329
13.1.2.1	Activation of Acids with Carbodiimides	330
13.1.2.2	Activation of Acids with Phosphonium Salts	334
13.1.2.3	Activation of Acids with Uronium Salts	335
13.1.2.4	Activation of Acids with Miscellaneous Coupling Reagents	337
13.1.3	Miscellaneous Preparations of Amides	338
13.1.4	Preparation of Amides by C-Alkylation of Other Amides	340
13.1.5	Preparation of Amides by N-Alkylation of Other Amides	341
13.2	Preparation of Hydroxamic Acids and Hydrazides	342
13.3	Preparation of Carboxylic Acids	343
13.4	Preparation of Carboxylic Esters	346
13.4.1	Preparation of Esters from Support-Bound Alcohols	346
13.4.1.1	Esterification of Support-Bound Alcohols with N-Protected α -Amino Acids	349
13.4.2	Preparation of Esters from Support-Bound Alkylating Agents	351
13.4.3	Preparation of Esters from Support-Bound Carboxylic Acids	353
13.4.4	Preparation of Esters by Chemical Modification of Other Esters	355
13.5	Preparation of Thiol Esters	356
13.6	Preparation of Amidines and Imino Ethers	357
13.7	Preparation of Nitriles and Isonitriles	358
13.8	Preparation of Imides	359
13.9	Preparation of Thioamides	361
14	Preparation of Carbonic Acid Derivatives	369
14.1	Preparation of Carbodiimides	369
14.2	Preparation of Isocyanates and Isothiocyanates	370
14.3	Preparation of Guanidines	371
14.4	Preparation of Ureas	374
14.5	Preparation of Thioureas and Isothioureas	377
14.6	Preparation of Carbamates	378
14.7	Preparation of Carbonates and Miscellaneous Carbonic Acid Derivatives	383
15	Preparation of Heterocycles	389
15.1	Preparation of Epoxides and Aziridines	389
15.2	Preparation of Azetidines and Thiazetidines	391
15.3	Preparation of Pyrroles and Pyrrolidines	392
15.4	Preparation of Indoles and Indolines	397
15.5	Preparation of Furans and Tetrahydrofurans	401

- 15.6 Preparation of Benzofurans and Dihydrobenzofurans 403
 - 15.7 Preparation of Thiophenes 405
 - 15.8 Preparation of Imidazoles 408
 - 15.9 Preparation of Hydantoins (2,4-Imidazolidinediones) and Thiohydantoins 411
 - 15.10 Preparation of Benzimidazoles, Purines, and Other Fused Imidazoles 414
 - 15.11 Preparation of Isoxazoles 417
 - 15.12 Preparation of Oxazoles and Oxazolidines 421
 - 15.13 Preparation of Thiazoles and Thiazolidines 422
 - 15.14 Preparation of Pyrazoles 423
 - 15.15 Preparation of Triazoles, Tetrazoles, Oxadiazoles, and Thiadiazoles 425
 - 15.16 Preparation of Pyridines and Dihydropyridines 427
 - 15.17 Preparation of Tetrahydropyridines and Piperidines 430
 - 15.18 Preparation of Fused Pyridines 432
 - 15.19 Preparation of Pyridazines (1,2-Diazines) 437
 - 15.20 Preparation of Pyrimidines (1,3-Diazines) 439
 - 15.21 Preparation of Quinazolines 441
 - 15.22 Preparation of Pyrazines and Piperazines (1,4-Diazines), and of their Fused Derivatives 444
 - 15.22.1 Preparation of Diketopiperazines 444
 - 15.22.2 Preparation of Miscellaneous 1,4-Diazines and Quinoxalines 447
 - 15.23 Preparation of Triazines 449
 - 15.24 Preparation of Pyrans and Benzopyrans 450
 - 15.25 Preparation of Oxazines, Thiazines, and Thiadiazines 452
 - 15.26 Preparation of Azepines and Larger Heterocycles with one Nitrogen Atom 454
 - 15.27 Preparation of Diazepines, Thiazepines, and Larger Heterocycles with more than one Heteroatom 456
-
- 16 Preparation of Oligomeric Compounds 469
 - 16.1 Peptides 470
 - 16.1.1 Merrifield's Peptide Synthesis 470
 - 16.1.2 The Boc Strategy 471
 - 16.1.3 The Fmoc Strategy 473
 - 16.1.4 Side-Chain Protection 475
 - 16.1.5 Backbone Protection 476
 - 16.1.6 Cyclic Peptides 477
 - 16.2 Oligonucleotides 478
 - 16.2.1 Historical Overview 478
 - 16.2.2 The Phosphotriester Method 480
 - 16.2.3 The Phosphoramidite and *H*-Phosphonate Methods 481
 - 16.2.4 Oligonucleotide Analogs 484
 - 16.3 Oligosaccharides 485

XVI *Contents*

16.3.1	Glycosylation with Glycosyl Bromides	485
16.3.2	Glycosylation with Glycosyl Sulfoxides	486
16.3.3	Glycosylation with Glycosyl Thioethers	487
16.3.4	Glycosylation with Miscellaneous Glycosyl Donors	487
16.4	Miscellaneous Oligomeric Compounds	489
16.4.1	Oligoamides	489
16.4.1.1	Oligoglycines	490
16.4.1.2	Peptide Nucleic Acids (PNA)	490
16.4.2	Oligoesters	492
16.4.3	Oligoureas and Oligothioureas	492
16.4.4	Oligocarbamates	493
16.4.5	Oligosulfonamides	494
16.4.6	Oligomeric Phosphoric Acid Derivatives	494
16.4.7	Peptide-Derived Oligomeric Compounds	495
16.4.8	Oligomers Prepared by C-C Bond Formation	495
16.4.9	Dendrimers	497
17	Index	505
