

Process Control Instrumentation Technology

Seventh Edition

Curtis D. Johnson

CONTENTS

1 INTRODUCTION TO PROCESS CONTROL 1

Instructional Objectives 1

1.1 Introduction 1

1.2 Control Systems 2

1.2.1 Process-Control Principles | 1.2.2 Servomechanisms |

1.2.3 Discrete-State Control Systems

1.3 Process-Control Block Diagram 6

1.3.1 Identification of Elements | 1.3.2 Block Diagram

1.4 Control System Evaluation 10

1.4.1 Stability | 1.4.2 Steady-State Regulation | 1.4.3 Transient Regulation |

1.4.4 Evaluation Criteria

1.5 Analog and Digital Processing 14

1.5.1 Data Representation | 1.5.2 ON/OFF Control | 1.5.3 Analog Control |

1.5.4 Digital Control | 1.5.5 Programmable Logic Controllers

1.6 Units, Standards, and Definitions 22

1.6.1 Units | 1.6.2 Analog Data Representation | 1.6.3 Definitions |

1.6.4 Process-Control Drawings

1.7 Sensor Time Response 36

1.7.1 First-Order Response | 1.7.2 Second-Order Response

1.8 Significance and Statistics 39

1.8.1 Significant Figures | 1.8.2 Statistics

Summary | Problems

2 ANALOG SIGNAL CONDITIONING 51

Instructional Objectives 51

2.1 Introduction 51

2.2 Principles of Analog Signal Conditioning 52

2.2.1 Signal-Level and Bias Changes | 2.2.2 Linearization |

2.2.3 Conversions | 2.2.4 Filtering and Impedance Matching |

2.2.5 Concept of Loading

2.3	Passive Circuits	56
	2.3.1 Divider Circuits 2.3.2 Bridge Circuits 2.3.3 RC Filters	
2.4	Operational Amplifiers	81
	2.4.1 Op Amp Characteristics 2.4.2 Op Amp Specifications	
2.5	Op Amp Circuits in Instrumentation	87
	2.5.1 Voltage Follower 2.5.2 Inverting Amplifier 2.5.3 Noninverting Amplifier 2.5.4 Differential Instrumentation Amplifier 2.5.5 Voltage-to-Current Converter 2.5.6 Current-to-Voltage Converter 2.5.7 Integrator 2.5.8 Differentiator 2.5.9 Linearization	
2.6	Design Guidelines	100
	Summary Problems	

3 DIGITAL SIGNAL CONDITIONING 113

	Instructional Objectives	113
3.1	Introduction	113
3.2	Review of Digital Fundamentals	114
	3.2.1 Digital Information 3.2.2 Fractional Binary Numbers 3.2.3 Boolean Algebra 3.2.4 Digital Electronics 3.2.5 Programmable Logic Controllers 3.2.6 Computer Interface	
3.3	Converters	123
	3.3.1 Comparators 3.3.2 Digital-to-Analog Converters (DACs) 3.3.3 Analog-to-Digital Converters (ADCs) 3.3.4 Frequency-Based Converters	
3.4	Data-Acquisition Systems	153
	3.4.1 DAS Hardware 3.4.2 DAS Software	
	Summary Problems	

4 THERMAL SENSORS 165

	Instructional Objectives	165
4.1	Introduction	165
4.2	Definition of Temperature	166
	4.2.1 Thermal Energy 4.2.2 Temperature	
4.3	Metal Resistance Versus Temperature Devices	170
	4.3.1 Metal Resistance Versus Temperature 4.3.2 Resistance Versus Temperature Approximations 4.3.3 Resistance-Temperature Detectors	
4.4	Thermistors	179
	4.4.1 Semiconductor Resistance Versus Temperature 4.4.2 Thermistor Characteristics	
4.5	Thermocouples	183
	4.5.1 Thermoelectric Effects 4.5.2 Thermocouple Characteristics 4.5.3 Thermocouple Sensors	

4.6	Other Thermal Sensors	194
4.6.1	Bimetal Strips 4.6.2 Gas Thermometers 4.6.3 Vapor-Pressure Thermometers 4.6.4 Liquid-Expansion Thermometers 4.6.5 Solid-State Temperature Sensors	
4.7	Design Considerations	201
	Summary Problems	

5 MECHANICAL SENSORS 213

	Instructional Objectives	213
5.1	Introduction	213
5.2	Displacement, Location, or Position Sensors	214
5.2.1	Potentiometric Sensors 5.2.2 Capacitive and Inductive Sensors 5.2.3 Variable Reluctance Sensors 5.2.4 Level Sensors	
5.3	Strain Sensors	222
5.3.1	Strain and Stress 5.3.2 Strain Gauge Principles 5.3.3 Metal Strain Gauges (SGs) 5.3.4 Semiconductor Strain Gauges (SGs) 5.3.5 Load Cells	
5.4	Motion Sensors	236
5.4.1	Types of Motion 5.4.2 Accelerometer Principles 5.4.3 Types of Accelerometers 5.4.4 Applications	
5.5	Pressure Sensors	248
5.5.1	Pressure Principles 5.5.2 Pressure Sensors ($p > 1$ atmosphere) 5.5.3 Pressure Sensors ($p < 1$ atmosphere)	
5.6	Flow Sensors	257
5.6.1	Solid-Flow Measurement 5.6.2 Liquid Flow	
	Summary Problems	

6 OPTICAL SENSORS 273

	Instructional Objectives	273
6.1	Introduction	273
6.2	Fundamentals of EM Radiation	274
6.2.1	Nature of EM Radiation 6.2.2 Characteristics of Light 6.2.3 Photometry	
6.3	Photodetectors	284
6.3.1	Photodetector Characteristics 6.3.2 Photoconductive Detectors 6.3.3 Photovoltaic Detectors 6.3.4 Photodiode Detectors 6.3.5 Photoemissive Detectors	
6.4	Pyrometry	299
6.4.1	Thermal Radiation 6.4.2 Broadband Pyrometers 6.4.3 Narrowband Pyrometers	

6.5	Optical Sources	304
6.5.1	Conventional Light Sources	6.5.2 Laser Principles
6.6	Applications	310
6.6.1	Label Inspection	6.6.2 Turbidity 6.6.3 Ranging
Summary Problems		

7 FINAL CONTROL 321

Instructional Objectives		321
7.1	Introduction	321
7.2	Final Control Operation	322
7.2.1	Signal Conversions	7.2.2 Actuators 7.2.3 Control Element
7.3	Signal Conversions	324
7.3.1	Analog Electrical Signals	7.3.2 Digital Electrical Signals
7.3.3	Pneumatic Signals	
7.4	Industrial Electronics	331
7.4.1	Silicon-Controlled Rectifier (SCR)	7.4.2 TRIAC
7.5	Actuators	340
7.5.1	Electrical Actuators	7.5.2 Pneumatic Actuators
7.5.3	Hydraulic Actuators	
7.6	Control Elements	351
7.6.1	Mechanical	7.6.2 Electrical 7.6.3 Fluid Valves
Summary Problems		

8 DISCRETE-STATE PROCESS CONTROL 367

Instructional Objectives		367
8.1	Introduction	367
8.2	Definition of Discrete-State Process Control	368
8.3	Characteristics of the System	369
8.3.1	Discrete-State Variables	8.3.2 Process Specifications 8.3.3 Event Sequence Description
8.4	Relay Controllers and Ladder Diagrams	383
8.4.1	Background	8.4.2 Ladder Diagram Elements 8.4.3 Ladder Diagram Examples
8.5	Programmable Logic Controllers (PLCs)	393
8.5.1	Relay Sequencers	8.5.2 Programmable Logic Controller Design
8.5.3	PLC Operation	8.5.4 Programming 8.5.5 PLC Software Functions
Summary Problems		

9 CONTROLLER PRINCIPLES 419

Instructional Objectives 419

9.1 Introduction 419

9.2 Process Characteristics 420

9.2.1 Process Equation | 9.2.2 Process Load | 9.2.3 Process Lag |
9.2.4 Self-Regulation

9.3 Control System Parameters 422

9.3.1 Error | 9.3.2 Variable Range | 9.3.3 Control Parameter Range |
9.3.4 Control Lag | 9.3.5 Dead Time | 9.3.6 Cycling |
9.3.7 Controller Modes

9.4 Discontinuous Controller Modes 428

9.4.1 Two-Position Mode | 9.4.2 Multiposition Mode | 9.4.3 Floating-
Control Mode

9.5 Continuous Controller Modes 437

9.5.1 Proportional Control Mode | 9.5.2 Integral-Control Mode |
9.5.3 Derivative-Control Mode

9.6 Composite Control Modes 446

9.6.1 Proportional-Integral Control (PI) | 9.6.2 Proportional-Derivative
Control Mode (PD) | 9.6.3 Three-Mode Controller (PID) |
9.6.4 Special Terminology

Summary | Problems

10 ANALOG CONTROLLERS 461

Instructional Objectives 461

10.1 Introduction 461

10.2 General Features 462

10.2.1 Typical Physical Layout | 10.2.2 Front Panel | 10.2.3 Side Panel

10.3 Electronic Controllers 463

10.3.1 Error Detector | 10.3.2 Single Mode | 10.3.3 Composite
Controller Modes

10.4 Pneumatic Controllers 485

10.4.1 General Features | 10.4.2 Mode Implementation

10.5 Design Considerations 490

Summary | Problems

11 DIGITAL CONTROL 499

Instructional Objectives 499

11.1 Introduction 499

11.2	Digital Electronics Methods	500
11.2.1	Simple Alarms 11.2.2 Two-Position Control	
11.2.3	Multivariable Alarms	
11.3	Computers in Process Control	505
11.3.1	Programmable Logic Controllers 11.3.2 Data Logging	
11.3.3	Supervisory Control 11.3.4 Computer-Based Controller	
11.4	Process-Control Networks	519
11.4.1	Functions of the Network 11.4.2 General Characteristics	
11.4.3	Foundation Fieldbus and Profibus	
11.5	Characteristics of Digital Data	524
11.5.1	Digitized Value 11.5.2 Sampled Data Systems	
11.6	Controller Software	529
11.6.1	Software Format 11.6.2 Input Data Operations	
11.6.3	Controller Modes	
11.7	Computer Controller Examples	546
	Summary Problems	

12 CONTROL-LOOP CHARACTERISTICS 557

	Instructional Objectives	557
12.1	Introduction	557
12.2	Control System Configurations	558
12.2.1	Single Variable 12.2.2 Cascade Control	
12.3	Multivariable Control Systems	562
12.3.1	Analog Control 12.3.2 Supervisory and Direct Digital Control	
12.4	Control System Quality	566
12.4.1	Definition of Quality 12.4.2 Measure of Quality	
12.5	Stability	573
12.5.1	Transfer Function Frequency Dependence 12.5.2 Stability Criteria	
12.6	Process Loop Tuning	578
12.6.1	Open-Loop Transient Response Method 12.6.2 Ziegler-Nichols	
12.6.3	Method 12.6.3 Frequency Response Methods	
	Summary Problems
