

CRC PRESS

# ROBUST CONTROL SYSTEMS with GENETIC ALGORITHMS

**Mo Jamshidi**  
**Leandro dos Santos Coelho**  
**Renato A. Krohling**  
**Peter J. Fleming**

# Table of Contents

<b>Chapter one</b>	<b>Genetic algorithms</b>	<b>1</b>
1.1	Introduction to genetic algorithms	1
1.2	Terms and definitions	2
1.3	Representation	4
1.3.1	Genetic algorithms with binary representation	4
1.3.2	Genetic algorithms with real representation	4
1.4	Fitness function	5
1.5	Genetic operators	7
1.5.1	Selection	7
1.5.1.1	Proportionate Selection	7
1.5.1.2	Tournament selection	8
1.5.2	Crossover	8
1.5.2.1	Crossover for binary representation	9
1.5.2.2	Crossover for real representation	9
1.5.3	Mutation	10
1.5.3.1	Mutation for binary representation	10
1.5.3.2	Mutation for real representation	10
1.6	Genetic algorithms for optimization	11
1.6.1	Genetic algorithms at work	11
1.6.2	An optimization example	12
1.7	Genetic programming	13
1.8	Conclusions	15
	References	16
<b>Chapter two</b>	<b>Optimal robust control</b>	<b>19</b>
2.1	Introduction to the control theory	19
2.2	Norms of signals and functions	22
2.3	Description of model uncertainty	23
2.4	Robust stability and disturbance rejection	25
2.4.1	Condition for robust stability	25
2.4.2	Condition for disturbance rejection	27
2.5	Controller design	29
2.5.1	Optimal controller design	30
2.5.2	Optimal robust controller design	32
2.5.3	Optimal disturbance rejection controller design	33

2.6	Optimization .....	33
2.6.1	The optimization problem .....	33
2.6.2	Constraint handling .....	34
2.7	Conclusions .....	36
	References.....	37

### **Chapter three Methods for controller design using genetic**

<b>algorithms .....</b>	<b>39</b>	
3.1	Introduction to controller design using genetic algorithms .....	39
3.2	Design of optimal robust controller with fixed structure.....	39
3.2.1	Design method .....	41
3.2.2	Design example .....	42
3.3	Design of optimal disturbance rejection controller with fixed structure .....	48
3.3.1	Design method .....	50
3.3.2	Design example .....	51
3.4	Evaluation of the methods .....	58
3.5	Conclusions .....	59
	References.....	59

### **Chapter four Predictive and variable structure control designs .....**

4.1	Model-based predictive controllers .....	61
4.1.1	Basic concepts and algorithms .....	62
4.1.2	Generalized predictive control .....	63
4.1.2.1	Formulation and design of GPC .....	63
4.1.2.2	Overview of optimization of GPC design by genetic algorithms .....	67
4.2	Variable structure control systems .....	68
4.2.1	Introduction.....	68
4.2.2	Basic concepts and controller design .....	71
4.2.3	Overview of optimization of variable structure control design by genetic algorithms .....	74
	References.....	75

### **Chapter five Design methods, simulation results, and conclusion .....**

5.1	Optimization of generalized predictive control design by genetic algorithms .....	79
5.1.1	Design method .....	79
5.1.2	Design example .....	80
5.1.3	Simulation results .....	82
5.1.3.1	Case study 1: Adaptive GPC design without constraints .....	82
5.1.3.2	Case study 2: Adaptive GPC design with constraints for the control signal .....	82
5.2	Optimization of quasi-sliding mode control design by genetic algorithms .....	85

5.2.1	Design method .....	85
5.2.2	Design example .....	86
5.2.3	Simulation results .....	88
5.2.3.1	Case study 1: Self-tuning quasi-sliding mode control .....	88
5.2.3.2	Case study 2: Self-tuning quasi-sliding mode control with gain scheduling .....	91
5.3	Conclusions .....	95
	References.....	97

## **Chapter six Tuning fuzzy logic controllers for robust control system design .....**

	design .....	99
6.1	Introduction .....	99
6.2	Fuzzy control .....	100
6.3	Genetic tuning of fuzzy control systems .....	101
6.4	Gas turbine engine control .....	103
6.4.1	Gas turbine engines — an overview .....	103
6.4.2	GTE types .....	104
6.4.3	The GTE control problem .....	105
6.5	Fuzzy control system design — example study .....	107
6.5.1	Problem formulation .....	107
6.5.2	Heuristic design of the fuzzy controllers .....	108
6.5.3	GA tuning of the fuzzy controllers .....	112
6.6	Applications of GAs for fuzzy control .....	114
	References.....	116

## **Chapter seven GA-fuzzy hierarchical control design approach .....**

7.1	Introduction .....	119
7.2	Hierarchical fuzzy control for a flexible robotic link .....	122
7.2.1	A mathematical model .....	122
7.2.2	Separation of spatial and temporal parameters .....	124
7.2.3	The second level of hierarchical controller .....	124
7.2.3.1	Line-curvature analysis .....	125
7.2.3.2	The rule base .....	125
7.2.4	The lower level of hierarchy .....	126
7.3	Genetic algorithms in knowledge enhancement .....	127
7.3.1	Interpretation function .....	127
7.3.2	Incorporating initial knowledge from one expert .....	128
7.3.3	Incorporating initial knowledge from several experts .....	130
7.4	Implementation issues .....	130
7.4.1	Software aspects .....	130
7.4.2	Hardware aspects .....	131
7.5	Simulation .....	132
7.6	Conclusions .....	134
	References.....	135

<b>Chapter eight Autonomous robot navigation through fuzzy-genetic programming .....</b>	<b>137</b>
8.1 Introduction .....	137
8.2 Hierarchical fuzzy-behavior control .....	138
8.2.1 Behavior hierarchy .....	139
8.3 Coordination by behavior modulation .....	141
8.3.1 Related work .....	142
8.4 Genetic programming of fuzzy behaviors .....	143
8.4.1 Rule discovery .....	143
8.5 Evolution of coordination .....	144
8.5.1 Behavior fitness evaluation .....	144
8.6 Autonomous navigation results .....	145
8.6.1 Hand-derived behavior .....	146
8.6.2 Evolved behavior .....	148
8.7 Conclusions .....	150
References.....	151

<b>Chapter nine Robust control system design: A hybrid H-infinity/multiobjective optimization approach.....</b>	<b>153</b>
9.1 Introduction .....	153
9.2 H-infinity design of robust control systems .....	154
9.2.1 Introduction to H-infinity design .....	154
9.2.2 Loop-shaping design procedure .....	155
9.2.3 H-infinity robust stabilization.....	157
9.3 Multiobjective optimization .....	158
9.3.1 Introduction to multiobjective optimization .....	158
9.3.2 Multiobjective genetic algorithms .....	159
9.3.3 Robust control system design: Incorporating multiobjective with H-infinity .....	161
9.4 Case study: Robust control of a gasification plant .....	162
9.4.1 Plant model and design requirements.....	163
9.4.2 Problem formulation .....	164
9.4.3 Design using a hybrid H-infinity/multiobjective optimization approach .....	165
9.5 Conclusions .....	169
References.....	170

<b>Appendix A Fuzzy sets, logic and control .....</b>	<b>171</b>
A.1 Introduction .....	171
A.2 Classical sets .....	172
A.3 Classical set operations .....	173
A.4 Properties of classical sets .....	174
A.5 Fuzzy sets and membership functions .....	175
A.6 Fuzzy sets operations .....	177
A.7 Properties of fuzzy sets .....	179

A.8	Predicate logic .....	183
A.9	Fuzzy logic .....	190
A.10	Fuzzy control .....	192
A.11	Basic definitions .....	194
A.12	Conclusion .....	202
	References.....	202
<b>Index</b>	.....	<b>203</b>
