IP OVER WDM

Building the Next Generation
Optical Internet

SUDHIR S. DIXIT

CONTENTS

Contributors	xvii
Preface	xix
1 IP-over-WDM Convergence	1
<i>Sudhir Dixit</i>	
1.1 Introduction	1
1.2 Why IP and Why WDM?	4
1.3 What Does WDM Offer?	5
1.4 Capacity, Interface Speeds, and Protocols	6
1.5 Why IP over WDM?	9
1.6 Book Outline	12
1.7 Concluding Remarks	16
2 Protocol Design Concepts, TCP/IP, and the Network Layer	19
<i>Shivkumar Kalyanaraman and Biplab Sikdar</i>	
2.1 Introduction	19
2.1.1 Protocols and Layering	19
2.1.2 Internet Protocol Design: The End-to-End Principle	21
2.2 Transport Layer and TCP	23
2.2.1 Service Models at the Transport Layer	23
2.2.2 UDP and Connectionless Transport	25
2.2.3 TCP and Connection-Oriented Transport	26
2.3 Network Layer	33
2.3.1 Network Service Models	33
2.3.2 Internet Protocol: Forwarding Paradigm	34
2.3.3 Internet Protocol: Packet Format, Addressing, and Fragmentation/Reassembly	36
2.3.4 Routing in the Internet	41
2.4 Asynchronous Transfer Mode	45
2.4.1 ATM Basics	45
2.4.2 IP over ATM	47
2.5 IP Switching	49

2.5.1	Connectionless Services over ATM	50
2.5.2	IP Switching Architecture	51
2.6	QoS, Integrated Services, and Differentiated Services	52
2.6.1	Integrated Services and RSVP	53
2.6.2	Differentiated Services	53
2.7	Multiprotocol Label Switching	55
2.7.1	Labels	55
2.7.2	Route Selection	56
2.8	Summary	56
	References	57
3	Optical Enabling Technologies for WDM Systems	59
	<i>Ari Tervonen</i>	
3.1	Introduction	59
3.2	Transmission Limitations in Optical Fiber	60
3.2.1	Propagation in Optical Single-Mode Fiber	60
3.2.2	Chromatic Dispersion	62
3.2.3	Polarization-Mode Dispersion	64
3.2.4	Nonlinear Optical Effects	64
3.2.5	Types of Single-Mode Optical Fiber	68
3.3	Key Technologies for WDM Systems	68
3.3.1	WDM Transmitters	69
3.3.2	WDM Filter Components	71
3.3.3	Erbium-Doped Fiber Amplifiers	76
3.3.4	Dispersion Compensation	83
3.3.5	Variable Optical Attenuators	84
3.3.6	Optical Switching Devices	84
3.3.7	Wavelength Converters	87
3.4	Development of WDM Systems	88
3.5	Summary	93
	References	95
4	Electro-optic and Wavelength Conversion	101
	<i>Byrav Ramamurthy</i>	
4.1	Introduction	101
4.2	Enabling Technologies	104
4.2.1	Wavelength-Converter Design	104
4.2.2	Wavelength-Convertible Switch Design	109
4.3	Network Design, Control, and Management Issues	111
4.3.1	Network Design	111
4.3.2	Network Control	113

4.3.3	Network Management	114
4.4	Benefit Analysis	114
4.4.1	Analytical Models	114
4.4.2	Related Work on Gain Characterization	123
4.5	Summary	124
	References	125
5	Contention Resolution in Optical Packet Switching	129
	<i>Shun Yao, Biswanath Mukherjee, and Sudhir Dixit</i>	
5.1	Introduction	129
5.2	Contention Resolution in Wavelength, Time, and Space Domains	130
5.2.1	Optical Buffering	132
5.2.2	Wavelength Conversion	132
5.2.3	Space Deflection	132
5.2.4	Combination Schemes	133
5.2.5	Simulation Experiments and Performance Comparison	133
5.3	Priority-Based Routing	143
5.3.1	Network Architecture and Routing Policies	143
5.3.2	Illustrative Results	144
5.4	Slotted versus Unslotted Networks	147
5.4.1	Network Architecture and Routing Policies	147
5.4.2	Illustrative Results and Discussion	148
5.5	Hybrid Contention Resolution for Optical Packet Switching	149
5.5.1	Node Architecture	149
5.5.2	Simulation Configuration	150
5.5.3	Illustrative Results	151
5.6	TCP Performance with Optical Packet Switching	152
5.6.1	Node Architecture	152
5.6.2	Simulation Configuration and Numerical Results	153
5.7	Summary	155
	References	155
6	Advances toward Optical Subwavelength Switching	157
	<i>Shun Yao, Biswanath Mukherjee, and Sudhir Dixit</i>	
6.1	Introduction	157
6.2	Optical Packet Switching	158
6.2.1	Slotted Networks	158
6.2.2	Unslotted Networks	161
6.2.3	Contention Resolution	162
6.2.4	Header and Packet Format	169
6.2.5	Optical Label Switching	171

6.3	Photonic Slot Routing	171
6.3.1	Architecture for PSR Mesh Networks	172
6.3.2	PSR Access Control Protocols	173
6.4	Optical Burst Switching	175
6.5	Summary	177
	References	177

7 Multiprotocol over WDM in the Access and Metropolitan Networks 181

Maurice Gagnaire

7.1	Introduction	181
7.2	Transport Optical Networks: A Global Perspective	182
7.3	Current Public Network Architecture	187
7.3.1	Access Networks	187
7.3.2	Metropolitan Area Networks	188
7.3.3	Core Networks	189
7.3.4	ISP Networks	190
7.4	Challenges in Access and Metropolitan Networks	191
7.4.1	Access Networks	191
7.4.2	Metropolitan Networks	192
7.5	Performance and QoS Evaluation	194
7.5.1	Medium Utilization Ratio	194
7.5.2	Mean Access Delay	195
7.5.3	Power of a MAC Protocol	196
7.5.4	QoS Provisioning	197
7.6	Optical Metropolitan Networks	201
7.6.1	Passive Optical Stars	201
7.6.2	Dual Counterrotating Rings	209
7.7	Optical Access Networks	216
7.7.1	A-PON Access Systems	219
7.7.2	B-PON Access System	223
7.8	Summary	225
	References	225

8 Ethernet Passive Optical Networks 229

Glen Kramer, Biswanath Mukherjee, and Ariel Maislos

8.1	Introduction	229
8.1.1	Traffic Growth	229
8.1.2	Evolution of the First Mile	230
8.1.3	Next-Generation Access Network	231
8.2	Overview of PON Technologies	232

8.2.1	Optical Splitters/Combiners	232
8.2.2	PON Topologies	233
8.2.3	WDM versus TDM PONs	234
8.2.4	Burst-Mode Transceivers	236
8.3	Ethernet PON Access Network	237
8.3.1	Why Ethernet?	237
8.3.2	Principle of Operation	238
8.3.3	Multipoint Control Protocol	241
8.3.4	EPON Compliance with 802 Architecture	244
8.4	Performance of EPON	249
8.4.1	Model Description	250
8.4.2	Bandwidth-Allocation Schemes	253
8.4.3	Simulation Results	256
8.4.4	Performance of Limited Service	259
8.5	Considerations for IP-Based Services over EPON	261
8.5.1	Slot Utilization Problem	261
8.5.2	Circuit Emulation (TDM over IP)	263
8.5.3	Real-Time Video and Voice over IP	264
8.6	Security Issues	268
8.6.1	Eavesdropping	269
8.6.2	Theft of Service	269
8.6.3	Solving the Problem Using Encryption	269
8.7	EPON Upgrade Scenarios	271
8.7.1	Wavelength Upgrade	271
8.7.2	Rate Upgrade	272
8.7.3	Spatial Upgrade	272
8.8	IEEE P802.3ah Status	272
8.9	Summary	273
	References	274

9 Terabit Switching and Routing Network Elements

277*Ti-Shiang Wang and Sudhir Dixit*

9.1	Introduction	277
9.2	Related Activities	279
9.2.1	Transparent Terabit Switching and Routing	279
9.2.2	Opaque Terabit Switching and Routing	280
9.3	Key Issues and Requirements for TSR Networks	282
9.3.1	Traffic Aggregation	282
9.3.2	Modular Structure and Greater Granularity	283
9.3.3	Scalability	283
9.3.4	Multiple Protocol Interfaces	283

9.3.5	Quality of Service	283
9.4	Architectures and Functionalities	284
9.4.1	Generic Architecture	284
9.4.2	Input Port Interface and Output Port Interface	285
9.4.3	Buffering Schemes	285
9.4.4	Switching Fabric	287
9.5	Implication of IP on Optical Network Nodes	290
9.5.1	IP-Based IPI and OPI	290
9.5.2	IP-Based Electronic Controller	291
9.6	Why Multiprotocol Label Switching?	292
9.6.1	Without MPLS	292
9.6.2	With MPLS	293
9.7	Summary	295
	References	295

10 Optical Network Engineering 299

George N. Rouskas

10.1	Introduction	299
10.2	Optical Network Architecture	301
10.3	Optical Network and Traffic Engineering	304
10.3.1	Routing and Wavelength Assignment	306
10.4	Optical Network Design and Capacity Planning	309
10.4.1	Physical Topology Design	310
10.4.2	Virtual Topology Design	311
10.4.3	Design of Survivable Optical Networks	314
10.5	Dynamic Lightpath Provisioning and Restoration	316
10.5.1	Route Computation	316
10.5.2	Wavelength Assignment	319
10.5.3	Performance of Dynamic RWA Algorithms	320
10.6	Control Plane Issues and Standardization Activities	321
10.7	Summary	324
	References	324

11 Traffic Management for IP-over-WDM Networks 329

Javier Aracil, Daniel Morato, and Mikel Izal

11.1	Introduction	329
11.1.1	Network Scenario	330
11.2	Traffic Management in IP Networks: Why?	331
11.2.1	Self-Similarity	331
11.2.2	Demand Analysis	332
11.2.3	Connection-Level Analysis	334

11.3	IP Traffic Management in IP-over-WDM Networks: How?	338
11.3.1	First-Generation WDM Networks	338
11.3.2	Second-Generation WDM Networks	340
11.3.3	Signaling	342
11.3.4	Framing Aspects for IP over WDM	346
11.4	End-to-End Issues	347
11.4.1	TCP for High-Speed and Split TCP Connections	349
11.4.2	Performance Evaluation of File Transfer (WWW) Services over WDM Networks	350
11.5	Summary	352
	References	354

12 IP- and Wavelength-Routing Networks 357

Ranjan Gangopadhyay and Sudhir Dixit

12.1	Introduction	357
12.2	Internet Protocol and Routing	358
12.3	Routing in Datagram Networks	359
12.3.1	Dijkstra's Algorithm	360
12.3.2	Distance Vector Algorithm	360
12.3.3	Deflection Routing	361
12.3.4	Hierarchical Routing	361
12.3.5	Common Routing Protocols	362
12.4	Wavelength-Routing Networks	363
12.4.1	Routing and Wavelength Assignment	365
12.4.2	RWA Algorithm	365
12.5	Layered Graph Approach for RWA	366
12.5.1	Layered Graph Model	367
12.5.2	Dynamic RWA Algorithm without Wavelength Conversion (Based on a Layered Graph)	367
12.5.3	Dynamic RWA with Wavelength Conversion (Based on a Layered Graph)	369
12.5.4	Simulation Results without Wavelength Conversion	369
12.5.5	Simulation Results with Wavelength Conversion	371
12.6	VWP Approach for Design of WDM Networks	372
12.6.1	Virtual Wavelength Path Algorithm	373
12.6.2	SPAWG Implementation	373
12.6.3	SPAWG Algorithm	374
12.6.4	Simulation Results with Wavelength Conversion	375
12.6.5	WDM Network Design with Non-Poisson Traffic	377
12.7	MPLS/MPAS/GMPLS	381
12.8	IP-over-WDM Integration	381
12.8.1	Interconnection Models	382

12.9	Integrated Dynamic IP and Wavelength Routing	383
12.9.1	Network Model	383
12.10	Waveband Routing in Optical Networks	387
12.10.1	Hierarchical/Integrated Optical Node/Network Models	387
12.10.2	Waveband Routing Models	388
12.10.3	Hierarchical Online Routing Algorithm	390
12.11	Additional Issues in Optical Routing	392
12.11.1	Physical Layer Constraints	392
12.11.2	Diversity Routing Constraints	392
12.11.3	Wavelength Conversion Constraints	394
12.11.4	Interdomain Routing	394
12.12	Summary	394
	References	395
13	Internetworking Optical Internet and Optical Burst Switching	397
	<i>Myungsik Yoo and Younghan Kim</i>	
13.1	Introduction	397
13.2	Overview of Optical Burst Switching	398
13.2.1	Protocol Aspect of OBS	398
13.2.2	Architectural Aspect of OBS	399
13.2.3	Signaling in the Optical Internet	403
13.2.4	Burst Assembly	405
13.3	QoS Provisioning with OBS	407
13.3.1	Class Isolation without FDLs	408
13.3.2	Class Isolation with FDLs	409
13.4	Survivability Issue in OBS Networks	411
13.4.1	Network Failure Detection	411
13.4.2	OBS Restoration	412
13.4.3	Bossy Channel Restoration and Unnecessary Reservation	416
13.5	Summary	417
	References	418
14	IP-over-WDM Control and Signaling	421
	<i>Chunsheng Xin, Sudhir Dixit, and Chunming Qiao</i>	
14.1	Introduction	421
14.2	Network Control	422
14.2.1	Telecommunication NC&M	422
14.2.2	Internet Network Control and MPLS Traffic Engineering Control Plane	423
14.3	MPAS/GMPLS Control Plane for Optical Networks	427

14.3.1	Resource Discovery and Link-State Information Dissemination	428
14.3.2	CSPF Path Computation	429
14.3.3	Wavelength Assignment	430
14.3.4	Restoration Management	431
14.3.5	Signaling	432
14.3.6	GMPLS Signaling Functional Requirements	435
14.3.7	Traffic Engineering Extension	436
14.3.8	Adjacencies	436
14.3.9	Link Management Protocol	437
14.4	Signaling Protocol	438
14.4.1	LDP Signaling Protocol in the MPLS Control Plane	438
14.4.2	CR-LDP	445
14.4.3	Optical Extension to CR-LDP	449
14.4.4	GMPLS Extension to CR-LDP	450
14.4.5	Resource Reservation Protocol	450
14.4.6	RSVP-TE	454
14.4.7	GMPLS Extension of RSVP-TE	457
14.4.8	Other Signaling Approaches	457
14.4.9	Signaling Protocols Comparison	457
14.5	Optical Internetworking and Signaling Across the Network Boundary	459
14.6	Sample IP-Centric Control Plane for Optical Networks	461
14.6.1	Main Module	463
14.6.2	Connection Module	463
14.6.3	Resource Management Module	465
14.6.4	Protection/Restoration Module	468
14.7	Summary	469
	References	469

15 Survivability in IP-over-WDM Networks

473*Yinghua Ye and Sudhir Dixit*

15.1	Introduction	473
15.1.1	Importance of Survivability in IP-over-WDM Networks	474
15.2	IP-over-WDM Architecture	475
15.3	Survivability Strategies	479
15.3.1	Protection	479
15.3.2	Restoration	482
15.4	Survivable Routing Algorithms	482
15.4.1	Overview of Routing and Wavelength Assignment Approaches	483
15.4.2	Path Routing	483

15.4.3	Cost Function	484
15.4.4	Survivable Routing Algorithms	485
15.5	Survivability Layer Considerations	487
15.5.1	IP Layer	487
15.5.2	WDM Layer	491
15.5.3	Illustrative Example	493
15.5.4	Traffic Grooming for Low-Rate Streams in Survivable WDM Mesh Networks	496
15.5.5	Multilayer Survivability Mechanisms	496
15.6	Fault Detection and Notification	503
15.6.1	Fault Detection	503
15.6.2	Fault Notification	504
15.7	Signaling Protocol Mechanism	504
15.8	Survivability in Future IP-over-Optical Networks	506
15.9	Summary	508
	References	509

16 Optical Internetworking Models and Standards Directions 511

Yang Cao and Richard Barry

16.1	Introduction	511
16.2	Traditional Networking View	512
16.3	Intelligent Optical Networks	512
16.4	Internetworking Models to Support Optical Layer Intelligence	513
16.5	Overlay Model	516
16.5.1	Static Overlay Model	518
16.5.2	Dynamic Overlay Model	518
16.6	Peer Model	521
16.7	Optical Internetworking and Ethernet Standards Activity Status Report	523
16.7.1	Internet Engineering Task Force	523
16.7.2	Optical Internetworking Forum	525
16.7.3	International Telecommunications Union	526
16.7.4	IEEE 802: Emerging Ethernet Standards	527
16.8	Gigabit Ethernet	528
16.8.1	10-Gigabit Ethernet	529
16.8.2	IEEE 802.3ab Gigabit Ethernet over Copper	530
16.8.3	IEEE 802.3af Task Force	530
16.8.4	IEEE 802.3 Ethernet to the First Mile Study Group	531
16.8.5	IEEE 802.17 Working Group on Resilient Packet Rings	531
16.9	Summary	531
	References	532
