

CRASH COURSE

Nervous System

SECOND EDITION

Briar, Lasserson, Gabriel, Sharrack

Faculty Advisor Tony Angel

Series Editor Dan Horton-Szar

- New edition of the best-selling revision tool for basic sciences integrating clinical topics
- Concise text and clear illustrations make information accessible and easy to retain
- Expanded self-assessment section including MCQs and short-answer questions

Contents

Preface	v	Structure and function of the sympathetic nervous system	85
Acknowledgements	vii	Structure and function of the parasympathetic nervous system	88
Dedication	viii	The enteric nervous system	89
		Disorders of the autonomic nervous system	89
Part I: Basic Medical Science of the Nervous system	1		
1. Overview of the Nervous System	3	8. Vision	93
Introduction	3	The eye	93
Anatomy of the central nervous system	3	Retinal function and image processing	95
Overall development of the nervous system	7	Central visual pathways and the visual cortex	99
The central nervous system environment	14	Attention and perception	102
		Loss of vision	103
2. Cellular Physiology of the Nervous System	19	9. Hearing	107
Neuronal structure and function	19	The ear and conduction of sound	107
Neuronal excitation and inhibition	20	The central auditory pathways and the auditory cortex	110
Synaptic transmission	25	Loss of hearing	112
Damage and repair in the nervous system	32		
		10. Olfaction and Taste	115
3. The Spinal Cord	37	Receptors for smell and taste	115
The spinal cord	37	Central pathways of smell and taste	116
The spinal tracts	38		
		11. Basic Pathology	119
4. Somatosensation and the Perception of Pain	47	Common pathological features of the central nervous system	119
Somatosensation and the sensory cortex	47	Malformations, developmental disease and perinatal injury	121
		Trauma of the central nervous system	124
5. Motor Control	57	Cerebrovascular disease	127
Movement control	57	Infections of the central nervous system	130
Motor units and the recruitment of muscles fibres	58	Demyelination and degeneration	135
Reflex action and muscle tone	59	Metabolic disorders and toxins	138
The motor cortex	63	Neoplasms of the central nervous system	140
Basal ganglia and thalamus	65	Epilepsy	142
The cerebellum	69		
The vestibular system, posture and locomotion	72	12. Pathology of the Peripheral Nerves and Muscles	147
		Hereditary neuropathies	147
6. The Brainstem	77	Traumatic neuropathies	148
The brainstem nuclei	77	Inflammatory neuropathies	150
The reticular formation	80	Infectious neuropathies	151
Function of the reticular formation	81	Metabolic and toxic neuropathies	152
Brain death	82		
7. The Autonomic Nervous System	85		
Introduction	85		

Neurocutaneous syndromes	154	15. The Neurological Assessment	189
Diseases of the muscles and neuromuscular junction	155	Beginning the interview	189
13. Higher Centres of the Central Nervous System	159	The structure of the history	189
Localization of function and behaviour	159	Communication skills	191
Learning and memory	161	The neurological examination	192
The limbic system	162	16. Further Investigations	223
Cognitive development and degeneration	166	Neurophysiological investigations	223
Pharmacology of higher central nervous system function	168	Routine investigations	224
Brainstem-acting drugs and general anaesthetics	172	Imaging of the nervous system	225
Part II: Clinical Assessment	177	Part III: Self-assessment	235
14. Common Presentation of Neurological Disease	179	Multiple-choice Questions (MCQs)	237
Common presenting complaints	179	Short-answer Questions (SAQs)	246
		Essay Questions	248
		MCQ Answers	249
		SAQ Answers	260
		Index	263
