

SECOND EDITION

Computer Networking

A Top-Down Approach Featuring the Internet

James F. Kurose ♦ Keith W. Ross

INTERNATIONAL EDITION

Table of Contents

Chapter 1	Computer Networks and the Internet	1
1.1	What Is the Internet?	2
1.1.1	A Nuts-and-Bolts Description	2
1.1.2	A Service Description	5
1.1.3	What Is a Protocol?	6
1.1.4	Some Good Hyperlinks	8
1.2	The Network Edge	9
1.2.1	End Systems, Clients, and Servers	9
1.2.2	Connectionless and Connection-Oriented Service	12
1.3	The Network Core	14
1.3.1	Circuit Switching and Packet Switching	14
1.3.2	Packet Forwarding in Computer Networks	25
1.4	Network Access and Physical Media	29
1.4.1	Network Access	30
1.4.2	Physical Media	35
1.5	ISPs and Internet Backbones	39
1.6	Delay and Loss in Packet-Switched Networks	41
1.6.1	Types of Delay	41
1.6.2	Queuing Delay and Packet Loss	45
1.6.3	Delay and Routes in the Internet	47
1.7	Protocol Layers and Their Service Models	49
1.7.1	Layered Architecture	50
1.7.2	The Internet Protocol Stack	54
1.7.3	Network Entities and Layers	57
1.8	History of Computer Networking and the Internet	58
1.8.1	The Development of Packet Switching: 1961–1972	58
1.8.2	Proprietary Networks and Internetworking: 1972–1980	60
1.8.3	A Proliferation of Networks: 1980–1990	61
1.8.4	The Internet Explosion: The 1990s	62
1.8.5	Recent Developments	64

1.9	Summary	65
	Homework Problems and Questions	67
	Problems	68
	Discussion Questions	73
	Interview: Leonard Kleinrock	74

Chapter 2	Application Layer	76
2.1	Principles of Application Layer Protocols	77
2.1.1	Application-Layer Protocols	78
2.1.2	What Services Does an Application Need?	83
2.1.3	Services Provided by the Internet Transport Protocols	85
2.1.4	Network Applications Covered in this Book	87
2.2	The Web and HTTP	88
2.2.1	Overview of HTTP	89
2.2.2	Nonpersistent and Persistent Connections	91
2.2.3	HTTP Message Format	94
2.2.4	User-Server Interaction: Authorization and Cookies	99
2.2.5	The Conditional GET	101
2.2.6	HTTP Content	103
2.3	File Transfer: FTP	103
2.3.1	FTP Commands and Replies	105
2.4	Electronic Mail in the Internet	106
2.4.1	SMTP	108
2.4.2	Comparison with HTTP	111
2.4.3	Mail Message Formats and MIME	112
2.4.4	Mail Access Protocols	117
2.5	DNS—The Internet's Directory Service	121
2.5.1	Services Provided by DNS	122
2.5.2	Overview of How DNS Works	124
2.5.3	DNS Records	129
2.5.4	DNS Messages	131
2.6	Socket Programming with TCP	133
2.6.1	Socket Programming with TCP	134
2.6.2	An Example Client/Server Application in Java	136
2.7	Socket Programming with UDP	143
2.8	Building a Simple Web Server	151
2.8.1	Web Server Functions	151
2.9	Content Distribution	155
2.9.1	Web Caching	156
2.9.2	Content Distribution Networks	162
2.9.3	Peer-to-Peer File Sharing	165

2.10	Summary	172
	Homework Problems and Questions	173
	Problems	175
	Discussion Questions	179
	Programming Assignments	180
	Interview: Tim Berners-Lee	182

Chapter 3 Transport Layer 184

3.1	Introduction and Transport-Layer Services	185
3.1.1	Relationship Between Transport and Network Layers	185
3.1.2	Overview of the Transport Layer in the Internet	188
3.2	Multiplexing and Demultiplexing	190
3.3	Connectionless Transport: UDP	196
3.3.1	UDP Segment Structure	199
3.3.2	UDP Checksum	200
3.4	Principles of Reliable Data Transfer	201
3.4.1	Building a Reliable Data Transfer Protocol	203
3.4.2	Pipelined Reliable Data Transfer Protocols	214
3.4.3	Go-Back-N (GBN)	217
3.4.4	Selective Repeat (SR)	222
3.5	Connection-Oriented Transport: TCP	228
3.5.1	The TCP Connection	228
3.5.2	TCP Segment Structure	230
3.5.3	Round-Trip Time Estimation and Timeout	235
3.5.4	Reliable Data Transfer	238
3.5.5	Flow Control	246
3.5.6	TCP Connection Management	248
3.6	Principles of Congestion Control	253
3.6.1	The Causes and the Costs of Congestion	253
3.6.2	Approaches to Congestion Control	259
3.6.3	Network Assisted Congestion Control Example: ATM ABR Congestion Control	260
3.7	TCP Congestion Control	262
3.7.1	Fairness	268
3.7.2	TCP Delay Modeling	271
3.8	Summary	280
	Homework Problems and Questions	281
	Problems	282
	Discussion Questions	290
	Interview: Sally Floyd	291

Chapter 4	Network Layer and Routing	293
4.1	Introduction and Network Service Models	294
4.1.1	Network Service Model	296
4.1.2	Origins of Datagram and Virtual Circuit Service	300
4.2	Routing Principles	301
4.2.1	A Link State Routing Algorithm	304
4.2.2	The Distance Vector Routing Algorithm	308
4.2.3	Other Routing Algorithms	317
4.3	Hierarchical Routing	317
4.4	The Internet Protocol (IP)	321
4.4.1	IPv4 Addressing	322
4.4.2	Moving a Datagram from Source to Destination: Addressing, Routing, and Forwarding	330
4.4.3	Datagram Format	333
4.4.4	IP Datagram Fragmentation	336
4.4.5	ICMP: Internet Control Message Protocol	339
4.4.6	Dynamic Host Configuration Protocol	340
4.4.7	Network Address Translators (NATs)	342
4.5	Routing in the Internet	346
4.5.1	Intra-Autonomous System Routing in the Internet: RIP and OSPF	346
4.5.2	Inter-Autonomous System Routing: BGP	353
4.6	What's Inside a Router?	358
4.6.1	Input Ports	360
4.6.2	Switching Fabric	362
4.6.3	Output Ports	364
4.6.4	Where Does Queuing Occur?	365
4.7	IPv6	368
4.7.1	IPv6 Packet Format	369
4.7.2	Transitioning from IPv4 to IPv6	372
4.8	Multicast Routing	375
4.8.1	Introduction: The Internet Multicast Abstraction and Multicast Groups	375
4.8.2	IGMP	379
4.8.3	Multicast Routing: The General Case	383
4.8.4	Multicast Routing in the Internet	388
4.9	Mobility and the Network Layer	391
4.9.1	Mobility Considerations in Network-Layer Design	391
4.9.2	Mobility Management	393
4.9.3	Mobile IP	400
4.10	Summary	405
	Homework Problems and Questions	406
	Problems	408
	Discussion Questions	414
	Interview: Vinton G. Cerf	417

Chapter 5 Link Layer and Local Area Networks **419**

5.1	Data Link Layer: Introduction and Services	421
5.1.1	The Services Provided by the Link Layer	421
5.1.2	Adapters Communicating	424
5.2	Error–Detection and –Correction Techniques	425
5.2.1	Parity Checks	427
5.2.2	Checksumming Methods	429
5.2.3	Cyclic Redundancy Check (CRC)	430
5.3	Multiple Access Protocols	432
5.3.1	Channel Partitioning Protocols	434
5.3.2	Random Access Protocols	438
5.3.3	Taking-Turns Protocols	446
5.3.4	Local Area Networks (LANs)	447
5.4	LAN Addresses and ARP	449
5.4.1:	LAN Addresses	449
5.4.2:	Address Resolution Protocol	451
5.5	Ethernet	455
5.5.1	Ethernet Basics	456
5.5.2	CSMA/CD: Ethernet’s Multiple Access Protocol	460
5.5.3	Ethernet Technologies	462
5.6	Hubs, Bridges, and Switches	466
5.6.1	Hubs	467
5.6.2	Bridges	468
5.6.3	Switches	476
5.7	Wireless Links	480
5.7.1	Wireless LANs: IEEE 802.11b	481
5.7.2	Bluetooth	487
5.8	PPP: The Point-to-Point Protocol	488
5.8.1	PPP Data Framing	490
5.8.2	PPP Link-Control Protocol (LCP) and Network-Control Protocols	492
5.9	Asynchronous Transfer Mode (ATM)	494
5.9.1	Principal Characteristics of ATM	495
5.9.2	ATM Physical Layer	497
5.9.3	ATM Layer	499
5.9.4	ATM Adaptation Layer	500
5.9.5	IP over ATM	502
5.10	Frame Relay	505
5.10.1	The Historical Context	505
5.10.2	Frame Relay	506
5.11	Summary	510
	Homework Problems and Questions	511
	Problems	513
	Discussion Questions	519
	Interview: Robert M. Metcalfe	520

Chapter 6	Multimedia Networking	522
6.1	Multimedia Networking Applications	523
6.1.1	Examples of Multimedia Applications	523
6.1.2	Hurdles for Multimedia in Today's Internet	526
6.1.3	How Should the Internet Evolve to Support Multimedia Better?	527
6.1.4	Audio and Video Compression	528
6.2	Streaming Stored Audio and Video	531
6.2.1	Accessing Audio and Video Through a Web Server	532
6.2.2	Sending Multimedia from a Streaming Server to a Helper Application	535
6.2.3	Real-Time Streaming Protocol (RTSP)	537
6.3	Making the Best of the Best-Effort Service: An Internet Phone Example	541
6.3.1	The Limitations of a Best-Effort Service	541
6.3.2	Removing Jitter at the Receiver for Audio	543
6.3.3	Recovering from Packet Loss	546
6.3.4	Streaming Stored Audio and Video	549
6.4	Protocols for Real-Time Interactive Applications	550
6.4.1	RTP	550
6.4.2	RTP Control Protocol (RTCP)	555
6.4.3	SIP	558
6.4.4	H.323	563
6.5	Beyond Best-Effort	565
6.5.1	Scenario 1: A 1 Mbps Audio Application and an FTP Transfer	566
6.5.2	Scenario 2: A 1 Mbps Audio Application and a High Priority FTP Transfer	567
6.5.3	Scenario 3: A Misbehaving Audio Application and an FTP Transfer	568
6.5.4	Scenario 4: Two 1 Mbps Audio Applications Over an Overloaded 1.5 Mbps Link	570
6.6	Scheduling and Policing Mechanisms	572
6.6.1	Scheduling Mechanisms	572
6.6.2	Policing: The Leaky Bucket	576
6.7	Integrated Services	579
6.7.1	Guaranteed Quality of Service	580
6.7.2	Controlled-Load Network Service	581
6.8	RSVP	582
6.8.1	The Essence of RSVP	582
6.8.2	A Few Simple Examples	584
6.9	Differentiated Services	587
6.9.1	Differentiated Services: A Simple Scenario	588
6.9.2	Traffic Classification and Conditioning	590
6.9.3	Per-Hop Behaviors	592
6.9.4	Criticisms of Differentiated Services	593

6.10	Summary	594
	Homework Problems and Questions	596
	Problems	596
	Discussion Questions	600
	Programming Assignment	601
	Interview: Henning Schulzrinne	602

Chapter 7	Security in Computer Networks	604
7.1	What Is Network Security?	605
7.2	Principles of Cryptography	608
7.2.1	Symmetric Key Cryptography	610
7.2.2	Public Key Encryption	614
7.3	Authentication	620
7.3.1	Authentication Protocol ap1.0	621
7.3.2	Authentication Protocol ap2.0	621
7.3.3	Authentication Protocol ap3.0	622
7.3.4	Authentication Protocol ap3.1	623
7.3.5	Authentication Protocol ap4.0	623
7.3.6	Authentication Protocol ap5.0	624
7.4	Integrity	627
7.4.1	Generating Digital Signatures	628
7.4.2	Message Digests	629
7.4.3	Hash Function Algorithms	631
7.5	Key Distribution and Certification	633
7.5.1	The Key Distribution Center	635
7.5.2	Public Key Certification	636
7.6	Access Control: Firewalls	640
7.6.1	Packet Filtering	641
7.6.2	Application Gateway	644
7.7	Attacks and Countermeasures	646
7.7.1	Mapping	646
7.7.2	Packet Sniffing	646
7.7.3	Spoofing	648
7.7.4	Denial-of-Service and Distributed Denial-of-Service Attacks	648
7.7.5	Hijacking	650
7.8	Security in Many Layers: Case Studies	650
7.8.1	Secure E-mail	651
7.8.2	Secure Sockets Layer (SSL) and Transport Layer Security (TLS)	656
7.8.3	Network-Layer Security: IPsec	660
7.8.4	Security in IEEE 802.11	663

7.9	Summary	665
	Homework Problems and Questions	666
	Problems	667
	Discussion Questions	669
	Interview: Steven M. Bellovin	670

Chapter 8 Network Management 672

8.1	What Is Network Management?	673
8.2	The Infrastructure for Network Management	677
8.3	The Internet-Standard Management Framework	680
	8.3.1 Structure of Management Information: SMI	681
	8.3.2 Management Information Base: MIB	684
	8.3.3 SNMP Protocol Operations and Transport Mappings	686
	8.3.4 Security and Administration	690
8.4	ASN.1	693
8.5	Conclusion	698
	Homework Problems and Questions	698
	Problems	699
	Discussion Questions	700
	Interview: Jeff Case	701
