SCHAUM'S outlines

FLUID DYNAMICS

Third Edition

WILLIAM F. HUGHES JOHN A. BRIGHTON

- Covers all course fundamentals
- New chapter on waves and stability
- 100 fully solved problems
- Perfect for professional exams

MORE THAN 30 MILLION SCHAUM'S OUTLINES SOLD

Use with these courses: ☑ Mechanics of Fluids ☑ Fundamentals of Fluid Dynamics ☑ Aerodynamics ☑ Gas Dynamics ☑ Aeronautical and Aerospace Sciences ☑ Waves and Stability

McGRAW-HILL INTERNATIONAL EDITIONS
Schaum's Outline Series

CONTENTS

CHAPTER 1 INTRODUCTION 1

1.1 What is a Fluid? 1
1.2 The Mathematical Model 2
1.3 Some Definitions 2
1.4 Physical Classifications and Types of Flow 6
1.5 How We Describe Fluid Motion 9
1.6 Units in Fluid Mechanics 9

CHAPTER 2 FLUID STATICS 12

2.1 Pressure 12
2.2 Differential Equations of Fluid Statics 13
2.3 Manometry 15
2.4 Fluid Forces on Submerged Bodies 16
2.5 Accelerating Fluids in the Absence of Shear Stress 18
2.6 Surface Tension 19
2.7 Summary 20

CHAPTER 3 MATHEMATICAL MODELS OF FLUID MOTION 34

3.1 Introduction and Method 34
3.2 Integral Equations 34
3.3 Differential Equations 44
3.4 Kinematics and Stress-Strain Rate Relationships in Fluids 49
3.5 The Navier-Stokes Equations 55
3.6 The Energy Equation 56
3.7 Relationships Between Momentum, Energy, Thermodynamics, and the Bernoulli Equation 59
3.8 Summary, Applications, and Problems 62

CHAPTER 4 DIMENSIONAL ANALYSIS AND SIMILITUDE 85

4.1 Similitude in Fluid Dynamics 85
4.2 Parameters of Incompressible Flow 86
4.3 Parameters of Compressible Flow 88
4.4 Additional Parameters Involved in Free Convective Heat Transfer in Fluids 89

CHAPTER 5 BOUNDARY LAYER FLOW AND FLOW IN PIPES AND DUCTS 99

5.1 Introduction 99
5.2 External Flows—Boundary Layers 103

5.3 External Flows—Lift and Drag 114
5.4 Internal Flow 118
5.5 Thermal Aspects of Viscous Flow 123
5.6 Summary 125

CHAPTER 6 INCOMPRESSIBLE POTENTIAL FLOW 146

6.1 Potential Flow Theory 146
6.2 The Bernoulli Theorem 149
6.3 The Kelvin Vortex Theorem and Vortex Motion 149
6.4 The Velocity Potential and Stream Function 151
6.5 Some Simple Flow Patterns 153
6.6 The Complex Potential 156
6.7 The Complex Potential for Some Simple Flows 159
6.8 Circulation and the Joukowski Theorem 163
6.9 Airfoil Theory 166

CHAPTER 7 ONE-DIMENSIONAL COMPRESSIBLE FLOW 181

7.1 Introduction 181
7.2 Isentropic Flow 184
7.3 Normal Shocks 188
7.4 Adiabatic Constant Area Flow (Fanno Line) 190
7.5 Frictionless Constant Area Flow with Heating and Cooling 195
7.6 Isothermal Flow with Friction 195
7.7 Incompressible Flow for Low Mach Numbers 196
7.8 The Shock Tube 197

CHAPTER 8 TWO-DIMENSIONAL COMPRESSIBLE FLOW GASDYNAMICS 212

8.1 Equations of Frictionless Compressible Flow 212
8.2 Shock-Expansion Theory 214
8.3 Small Perturbations and the Linearized Theory 225
8.4 The Method of Characteristics 227
8.5 Supersonic Aircraft 234

CHAPTER 9 INCOMPRESSIBLE TURBULENT FLOW 245

9.1 Introduction 245
9.2 Equations of Mean Velocity 246
9.3 Statistical Approach 246
9.4 Phenomenological Theories 249
9.5 Turbulence Correlations 251
9.6 Isotropic Turbulence 251
9.7 Wall Turbulence 252
9.8 Free Turbulence 256

9.9 Recent Developments 259
9.10 Summary 259

CHAPTER 10 HYPERSONIC BOUNDARY LAYER FLOW 262

10.1 Introduction 262
10.2 Boundary Layer Equations 263
10.3 Hypersonic Laminar Boundary Layer 266
10.4 Hypersonic Turbulent Boundary Layer 268
10.5 Aerodynamic Heating 271
10.6 Summary and Discussion 272

CHAPTER 11 MAGNETOHYDRODYNAMICS 275

11.1 Introduction 275
11.2 Electrodynamics of Moving Media 275
11.3 The Induced EMF and Terminal Voltage 278
11.4 The Electromagnetic Body Force 279
11.5 Basic Concepts of MHD Flow 280
11.6 Incompressible Viscous MHD Flow 283
11.7 Waves and Shocks in MHD 286
11.8 Compressible Flow—Magnetogasdynamic Channel Flow 292

CHAPTER 12 NON-NEWTONIAN FLUIDS 302

12.1 Introduction 302
12.2 Characteristics and Classification of Non-Newtonian Fluids 302
12.3 Laminar Flow in Pipes 307
12.4 Generalized Method for Flow in Pipes 311

CHAPTER 13 WAVES AND STABILITY 316

13.1 Introduction 316
13.2 Traveling Waves and Phasor Representation 317
13.3 Phase Velocity and Group Velocity 320
13.4 Dispersion and Attenuation 321
13.5 Standing Waves 322
13.6 Calculation of the Dispersion Equation for a Sound Wave 323
13.7 A Reflected Sound Wave from a Stationary Wall 326
13.8 Shear Waves in a Viscous Fluid 328
13.9 Surface Waves on Water 329
13.10 Some Final Comments on Waves 331
13.11 Stability Theory 332
13.12 Stability of a Liquid Jet 333
13.13 Stability of Flow Between Rotating Cylinders 336
13.14 Stability of Interfaces Between Fluids 339
13.15 Concluding Remarks 340

Appendix A SOME PROPERTIES OF FLUIDS 349

Appendix B UNITS AND DIMENSIONS 355

Appendix C SOME BASIC EQUATIONS IN VARIOUS COORDINATE SYSTEMS 360

Appendix D TABLES FOR COMPRESSIBLE FLOW 370

Appendix E CARTESIAN TENSORS 377

Appendix F VECTOR IDENTITIES 379

Appendix G FLOW MEASURING TECHNIQUES 380

ANSWERS TO SELECTED PROBLEMS 383

Index 387
