

LINUX & UNIX Programming Tools

A PRIMER
for Software Developers

SARWAR | AL-SAQABI

TABLE OF CONTENTS

Preface	v
Acknowledgements	vii
Part I: Using LINUX and UNIX Effectively	
Chapter 1 Getting Started	1
1.1 Introduction	2
1.2 A Brief History of LINUX	2
1.3 Logon and Logoff Procedures	4
1.4 LINUX/UNIX Shells	6
1.4.1 Search Path for a Shell	6
1.4.2 Locations of Various Shells	7
1.4.3 Which Shell Suits Your Needs?	8
1.4.4 Various Ways to Change Your Shell	9
1.4.5 Shell Startup Files and Environment Variables	10
1.5 Some Important System Setups	12
1.6 Useful General-Purpose Commands for Beginners	14
1.6.1 Displaying the Current Time and Date	14
1.6.2 Displaying A Text File	14
1.6.3 Creating a Directory	15
1.6.4 Displaying a Directory	15
1.6.5 Displaying the Name of Your Current Directory or a Home Directory	16
1.6.6 Changing Directories	16
1.6.7 Removing Directories	17
1.6.8 Printing Files	18
1.6.9 Getting Help	18
1.6.10 Changing Your Password	20
1.6.11 The Command History	21
1.6.12 Displaying a Calendar	22
1.6.13 Displaying System Up Time	22
1.7 Shell Metacharacters	23
1.8 Web Resources	24
1.9 Summary	24
1.10 Questions and Problems	25

Chapter 2 Files and File Processing	29
2.1 Introduction	30
2.2 Files in LINUX/UNIX	30
2.3 File System Structure	31
2.3.1 File System Organization	31
2.3.2 Pathnames: Absolute and Relative	31
2.3.3 Home and Present Working Directories	33
2.3.4 Search Path	33
2.4 Some Standard Directories and Files	34
2.5 Directory Operations and Browsing the File System Structure	38
2.5.1 Creating and Removing Directories	38
2.5.2 Moving and Copying Directories	39
2.5.3 Browsing the File System Structure and Listing Directories	40
2.6 File Processing	42
2.6.1 Creating Files	42
2.6.2 Displaying File Type and Type of Data in a File	42
2.6.3 Viewing Complete Files	44
2.6.4 Viewing Files One Page at a Time	45
2.6.5 Viewing the Head or Tail of a File	47
2.6.6 Displaying the NIS Database	49
2.6.7 Copying Files	49
2.6.8 Moving and Renaming Files	51
2.6.9 Removing/Deleting Files	52
2.6.10 Determining File Size	53
2.6.11 Appending to Files	55
2.6.12 Combining Files	56
2.6.13 Comparing Files	56
2.6.14 Compressing Files	59
The gzip Command	59
The gunzip Command	59
The gzexe Command	61
The zcat Command	62
2.6.15 Searching for Files and Commands	63
The find Command	63
The whereis Command	65
The which Command	66
2.6.17 Searching Files	67
2.7 Summary	70
2.8 Questions and Problems	71
 Chapter 3 Input/Output Redirection	 75
3.1 Introduction	76
3.2 Standard Files, File Descriptors, and Redirection of Standard Files	76
3.3 Input, Output, and Error Redirection	77

3.3.1	Input Redirection	77
3.3.2	Output Redirection	78
3.3.3	Error Redirection	79
3.3.4	Redirecting stdin, stdout, and stderr in One Command	80
3.3.5	Appending Data to a File	82
3.4	LINUX/UNIX Filters and Pipes	83
3.5	Redirection and Piping Combined	85
3.6	Summary	86
3.7	Questions and Problems	87
Chapter 4 Printer Control		89
4.1	Introduction	90
4.2	LINUX/UNIX Mechanism for Printing Files	90
4.3	Printer Control Commands	90
4.4	Printing Files	91
4.5	Finding the Status of a Print Request	92
4.6	Displaying the Names of Printers on Your System	94
4.7	Canceling Print Jobs	95
4.8	Controlling Printers	97
4.9	Summary	98
4.10	Questions and Problems	98
Chapter 5 File Security		101
5.1	Introduction	102
5.2	File Protection Based on Access Permission	102
5.2.1	Types of Users	102
5.2.2	Types of File Operations/Access Permissions	103
5.2.3	Default File Access Privileges	104
5.2.4	Determining File Access Privileges	106
5.2.5	Changing File Access Privileges	107
5.3	Special Access Bits	111
5.3.1	The Set-User-ID (SUID) Bit	111
5.3.2	The Set-Group-ID (SGID) Bit	113
5.3.3	The Sticky Bit	114
5.4	File Permissions and Types	116
5.5	Summary	116
5.6	Questions and Problems	117
Chapter 6 LINUX/UNIX Processes		119
6.1	Introduction	120
6.2	Processes, Jobs, and Daemons	120
6.3	Process and Job Control	121

6.3.1 Displaying Process Attributes	121
6.3.2 Foreground, Background, and Suspended Processes	126
6.3.3 Displaying Jobs	128
6.3.4 Suspending and Resuming a Shell Process	129
6.3.5 Running Commands Sequentially and Simultaneously	130
6.3.6 Abnormal Termination of Commands and Processes	131
6.4 Process Hierarchy in LINUX/UNIX	133
6.5 Displaying Process Attributes in LINUX/UNIX	134
6.6 Summary	135
6.7 Questions and Problems	136

Chapter 7 File System Backup and Restoration 139

7.1 Introduction	140
7.2 Archiving and Restoring Files Using tar	140
7.2.1 Archiving Files	141
7.2.2 Restoring Archived Files	143
7.2.2.1 Complete Restoration	143
7.2.2.2 Partial Restoration	144
7.2.3 Copying Directory Hierarchies	145
7.3 Software Distributions in the tar Format	146
7.4 Summary	147
7.5 Questions and Problems	147

Part II: Program Development on a LINUX or UNIX Platform

Chapter 8 Program Development Process 149

8.1 Introduction	150
8.2 An Overview of Computer Programming Languages	150
8.3 Programming Languages and Programming Paradigms	152
8.3.1 Programming Languages	152
8.3.2 Programming Paradigms	153
8.4 The Compilation Process	154
8.5 The Interpretation Process	154
8.6 Compiling C, C++, and Java Programs	155
8.7 The Software Engineering Life Cycle	156
8.8 Web Resources	157
8.9 Summary	157
8.10 Questions and Problems	158

Chapter 9 Program Generation Tools 159

9.1 Introduction	160
9.2 Generating Program Source Files	160

9.3	Indenting Source Code	160
9.4	Compiling C/C++ Programs	164
9.4.1	Compiling Multiple Source Files	168
9.4.2	Linking Libraries	169
9.4.3	Optimizing Executable Code	171
9.4.4	Defining Macros at Command Line	172
9.4.5	Turning Off Compilation, Assembly, or Linking Phase	173
9.5	Compiling C++ Programs	174
9.6	Compiling Java Programs	176
9.7	Disastrous Compiler Commands and Typical Compile Time Errors	1777
9.8	Compiling and Interpreting Programs in Other Programming Languages	177
9.9	Web Resources	178
9.10	Summary	178
9.11	Questions and Problems	178
Chapter 10	Compiling and Linking Multimodule Software	181
10.1	Introduction	182
10.2	The make Utility	182
10.2.1	Makefile and Make Rules	183
10.2.2	Multimodule Software, Dependency Trees, and make	185
10.2.3	Suffix (Default) Rules	191
10.2.4	Macro Support of the make Utility	192
10.2.5	Built-in Macros	194
10.2.6	Dummy Targets	196
10.2.7	Special Targets	200
10.2.8	Common Syntax Errors and Their Cures	201
10.2.9	Command-line Usage and Debugging	203
10.3	Web Resources	203
10.4	Summary	204
10.5	Questions and Problems	204
Chapter 11	Developing, Using, and Debugging Libraries	207
11.1	Introduction	208
11.2	Using Libraries	208
11.3	The ar Utility	210
11.3.1	Creating or Appending to an Archive	212
11.3.2	Displaying the Table of Contents	213
11.3.3	Deleting Object Modules from an Archive	214
11.3.4	Extracting Object Modules from an Archive	214
11.3.5	Ordering Archives	216
11.3.6	Installing Libraries	217
11.4	The nm Utility	217

11.4.1 Displaying Library Information	219
11.5 Web Resources	223
11.6 Summary	223
11.7 Questions and Problems	224
Chapter 12 Source Code Debugging	227
12.1 Introduction	228
12.2 Source Code Debugging	228
12.2.1 Using <code>printf</code> or <code>cout</code>	228
12.2.2 Using a Debugging Tool	229
12.3 The Debugging Process	229
12.4 The GNU Debugger <code>gdb</code>	230
12.4.1 Using <code>gdb</code> with C/C++ Programs	231
Entering the <code>gdb</code> Environment	233
Executing a Program	237
Tracing Program Execution	237
Setting Break Points	238
Single-Stepping Through Your Program	239
Displaying the Value of a Variable or Expression	240
Listing Program Code	241
Fixing the Bug	242
Leaving <code>gdb</code> and Wrapping Up	243
12.5 Debugging a Process	244
12.6 Running a Crashed Program with a Core File	246
12.7 Debugging Java Programs with <code>gdb</code>	246
12.8 Using <code>gdb</code> Under Emacs	248
12.9 Software Testing	248
12.10 Web Resources	249
12.11 Summary	249
12.12 Questions and Problems	250
Chapter 13 Software Profiling and Metrics	253
13.1 Introduction	254
13.2 Software Metrics and Their Purpose	254
13.3 Profiling C/C++ Programs	255
13.3.1 Steps for Using <code>gprof</code>	257
13.3.2 Analyzing the Output of <code>gprof</code>	259
13.4 Optimizing Software	263
13.5 Software Metrics: Size and Running Time	263
13.5.1 The Size of Source and Executable Programs	264
13.5.2 The Running Time of a Program	266

13.6	Web Resources	268
13.7	Summary	268
13.8	Questions and Problems	269
Chapter 14 Version Control with RCS and CVS		271
14.1	Introduction	272
14.2	The Revision Control System (RCS)	272
14.2.1	Working with RCS	273
14.2.2	Creating an RCS History File	273
14.2.3	Checking Out an RCS File	274
14.2.4	Creating a New Version of a File	276
14.2.5	Checking Out Copies of Specific Versions	276
14.2.6	Abandoning Changes	278
14.2.7	Locking a File Without Overwriting (Taking Care of a Mistake)	279
14.2.8	Removing a Version	280
14.2.9	Working in Groups	281
14.2.10	Displaying the History of RCS Files	282
14.2.11	Breaking Locks	284
14.2.12	Displaying Differences Between Versions	285
14.2.13	Merging Versions	286
14.2.14	Limiting Access Rights to RCS	288
14.2.15	RCS Special Character Sequences	289
14.2.16	Miscellaneous RCS Utilities	291
14.2.17	Using RCS from within <code>emacs</code>	291
14.2.18	Beyond RCS	291
14.3	Concurrent Versions System (CVS)	292
14.3.1	The CVS Command Syntax	292
14.3.2	Displaying CVS Help	293
14.3.3	Creating a Source Repository	295
14.3.4	Importing Sources into the Repository	297
14.3.5	Checking Out Source Files	298
14.3.6	Making and Committing Changes to Source Files	301
14.3.7	Adding New Files and Directories to the Repository	304
14.3.8	Removing Files and Directories from the Source Repository	305
14.3.9	Freezing and Extracting a Version	306
14.3.10	Displaying Differences	307
14.3.11	Displaying the Log History	307
14.3.12	CVS Special Character Sequences	307
14.3.13	After-Work Cleanup	309
14.3.14	Remote Repositories and Accessing Them through a Client	310
14.3.15	Using CVS Under <code>emacs</code>	311
14.3.16	Important Aspects of CVS	311
14.3.17	Obtaining and Installing CVS	311

14.4 Web Resources	313
14.5 Summary	313
14.6 Questions and Problems	314
Appendix A Editing Text Files with vi and pico	315
The vi or vim Editor	315
The pico Editor	319
Appendix B Electronic Mail	321
The mail Command	321
The pine Command	322
Glossary	327
Index	337
